P	REFACE		10
1	INTROD	UCTION	11
		AT IS EVE-NG?	
		AT IS EVE-NG USED FOR?	
	1.3 Wнo	DIS EVE-NG FOR?	11
2	SYSTEM	I REQUIREMENTS	12
	2.1 HAR	DWARE REQUIREMENTS	12
	2.1.1	Minimal Laptop/PC Desktop system requirements	
	2.1.2	Recommended Laptop/PC Desktop system requirements	13
	2.1.3	Virtual Server system requirements	13
	2.1.4	Dedicated Server (bare metal BM) system requirements	14
	2.1.5	Nodes per lab calculator	
	2.1.6	EVE Management Networks	
		PORTED VIRTUALIZATION PLATFORMS AND SOFTWARE	
	2.3 UNS	UPPORTED HARDWARE AND SYSTEMS	15
3	INSTALI	LATION	16
	3.1 VMv	VARE WORKSTATION OR VM PLAYER	16
	3.1.1	VMware Workstation VM installation using ISO image	
	3.1.1.1	EVE VM Setup and Settings	
	3.1.1.2	EVE-NG VM Installation steps	
	3.2 VMv	VARE ESXI	22
	3.2.1	VMware ESXi EVE VM installation using ISO image	
	3.2.1.1		
	3.2.1.2		
		E HARDWARE (BM) SERVER INSTALLATION	
	3.3.1	BM Server installation EVE ISO	
	3.3.2	BM Server Installation Ubuntu legacy ISO	
		OGLE CLOUD PLATFORM	
	3.4.1 3.4.2	Google account Preparing Ubuntu boot disk template	
	3.4.2 3.4.3	Network MTU settings and firewall rules for GCP	
	3.4.3 3.4.4	Optional: GCP MTU 1500 Firewall rules for native console use	
	3.4.5	Creating VM	
	3.4.6	EVE-NG Pro installation	
	3.4.7	Access to Google Cloud EVE-PRO	
	3.4.8	Optional: GCP MTU 1460 Firewall rules for native console use	
		MANAGEMENT IP ADDRESS SETUP	
	3.5.1	Static Management IP address setup (preferred)	45
	3.5.2	DHCP Management IP address setup	47
	3.5.3	Internet proxy setup	49
	3.5.4	Reset Management IP settings	
	3.6 Nat	IVE TELNET CONSOLE MANAGEMENT SETUP	
	3.6.1	Windows Native Console	
	3.6.2	Linux Native Console	
	3.6.3	MAC OSX Native Console	
	3.7 Log	IN TO THE EVE WEB GUI	53

# Preface

When I first heard about EVE-NG I was skeptical. Back then I used to Lab mainly with ESX by deploying many virtual Devices and connecting them manually by separate vSwitches for Point-to-Point connections. The Problem with that was, that it was extremely time-consuming and did not scale - for every new Device I had to create multiple vSwitches to interconnect them with the virtual Machines - a Nightmare. I was in the middle of my JNCIE-Exam-Prep when I first saw EVE-NG on Twitter - I downloaded the Community Edition, which was the only Edition back then and I was amazed how easy Labbing all of a sudden was. No more deploying of vSwitches to interconnect nodes and boy did it Scale...

If you follow me on Twitter you know, that I'm one of the hardest Juniper Fanboys and of course my Goal was to "Juniperize" EVE. I started to get in touch with UD and Alain and found myself into the Position as one of the Juniper Test Guys. Meanwhile I added nearly all Juniper related Devices (including vSRX and JATP) and I still test a Lot - but now on EVE-Pro.

The Pro-Edition was a big step forward for the Project. It added some nice Features like "hotadd-interconnect" and the Ability to use EVE-NG with multiple Users. Especially Companies will love EVE as it is THE Solution for Labs and PoC's. I have successfully run over 30 PoC's in EVE and over 100 Labs (Job-Related and Personal Labs) - and I still enjoy it every day thanks to EVE and the amazing Team behind it. When the Guys asked me to write the Introduction, I was of course honored and now this Book is finally coming out to help you on your Quest to Setup, Run and Manage EVE-NG in a lot of possible ways.

Well - enough from my Side. I hope you enjoy this Cookbook and use it wisely for your Everyday EVE Work. If you have Problems there is always the EVE-Forum and Live-Helpdesk - you will also find me there from time to time ;)

I wish you happy reading and if you think, that this Product is amazing feel free to support it by buying the PRO-Edition or Donating a bit – it helps to expand this already cool Product even more and it also honors all the work that the Guys spent in it.

Christian Scholz @chsjuniper

# 1 Introduction

#### 1.1 What is EVE-NG?

To describe what Emulated Virtual Environment – Next Generation (EVE-NG) is without solely stating dry facts about features, we need to elaborate more on what EVE-NG can be used for and whom it would be useful for.

In some trivial dry words, EVE-NG gives you tools to use around virtual devices and interconnect them with other virtual or physical devices. Many of its features greatly simplify the usability, re-usability, manageability, interconnectivity, distribution and therefore the ability to understand and share topologies, work, ideas, concepts or simply "labs". This can simply mean it will reduce the cost and time to set up what you need or it might enable you to do tasks you would not have thought could be done this simple.

#### 1.2 What is EVE-NG used for?

This is the real question but there is no finite answer, the possibilities are almost limitless and depends on what you want to use it for.

It can be used for studying all kinds of technologies. You can learn about general technologies or vendor specific topics. You can test new technologies like network automation, SDN, etc.

It can be used to recreate corporate networks and test changes before putting them into production. You can create proof of concepts for clients. You can troubleshoot network issues by recreating them and e.g. use Wireshark to inspect packets.

It is most definitely not just for networking, it can be used to test software in simulated networks, test out security vulnerabilities of any kind, system engineering like LDAP and AD servers and many more areas.

You could set it up to automate sandboxing unknown files/software and use software to analyse short- and long-term behaviour for malicious intent much simpler than without EVE-NG.

The list of what EVE-NG can be used for could go on indefinitely, possibilities are limited by knowledge and imagination only. Both of which can be improved with EVE-NG.

To get a very small idea of what can be done with EVE-NG, check out the tested/<u>supported</u> <u>images</u> (many have not been tested, almost everything virtual should run on EVE-NG) and refer to section **17**.

EVE-NG helps you achieve what you want to and more.

#### 1.3 Who is EVE-NG for?

EVE-NG is for everyone working in the Information Technology Sector, period.

It is for very large enterprise companies, training facilities, service providers, consultants, people who want to train themselves; it is for everyone, it is for YOU!

Use-cases that are more than worth it, almost priceless even, can be found everywhere.

The EVE-NG community version is free for everyone; while the paid professional version adds a few things that make your life easier. Almost everything can still be done with the free version, just less conveniently and therefore more time-consuming.

However, with the free version, the possibility to train yourself with technologies, hone your skills and become an expert even with very no monetary possibilities. For some this is and has been life changing.

# 2 System requirements

EVE-NG software is available in the ISO file format. The ISO is an open standard for packaging and distributing install media. It can be used to deploy a VM in hypervisors like VMware Workstation, Player and ESXi. Please note that installing EVE as a Virtual Machine (VM) will mean any nodes deployed within EVE will be nested. Nested virtualization causes degraded performance in deployed nodes. This should be fine for lab purposes as long as the host meets or exceeds the resource requirements for the deployed nodes.

EVE-NG can also be installed directly on physical hardware, without a hypervisor, using the provided ISO image. This is referred to as a "bare metal" install and is the most recommended method of installing EVE-NG.

#### 2.1 Hardware requirements

#### 2.1.1 Minimal Laptop/PC Desktop system requirements

#### Prerequisites:

CPU: Intel CPU supporting Intel® VT-x /EPT virtualization Operating System: Windows 10, 11 or Linux Desktop VMware Workstation 16.0 or later VMware Player 16.0 or later

PC/Laptop HW requirements		
CPU	Intel i7 (8 Logical processors vCPU), Enabled Intel virtualization in BIOS	
RAM	8Gb	
HDD Space	50Gb	
Network	LAN/WLAN	
EVE Virtual machine requirements		
CPU	1/8 (Amount of processors/Number of cores per processor) Enabled Virtualize Intel VT-x/EPT or AMD-V/RVI and virtualize IOMMU options	
RAM	8Gb or more	
HDD	50Gb or more	
Network	VMware NAT or Bridged network adapter	

**Note:** Minimal/small PC Desktop/Laptop will be able to run small Labs. The performance and quantity of nodes per lab depend on the types of nodes deployed in the lab.

Example:

IOL image-based nodes: up to 30- nodes per lab Dynamips image-based nodes: up to 20-25 nodes per lab vIOS image-based nodes: up to 8-10 nodes per lab CSRv1000 or XRv image-based nodes: up to 2-3 per lab

#### 2.1.2 Recommended Laptop/PC Desktop system requirements

#### **Prerequisites:**

CPU: Intel CPU supporting Intel® VT-x /EPT virtualization Operation System: Windows 10, 11 or Linux Desktop VMware Workstation 16.0 or later VW Ware Player 16.0 or later

PC/Laptop HW requirements		
CPU	Intel i7 (16 Logical processors), Enabled Intel virtualization in BIOS	
RAM	32Gb	
HDD Space	200Gb	
Network	LAN/WLAN	
EVE Virtual machine requirements		
CPU	1/16 (Amount of processors/Number of cores per processor) Enabled Virtualize Intel VT-x/EPT or AMD-V/RVI and virtualize IOMMU options	
RAM	24Gb or more	
HDD	200Gb or more	
Network	VMware NAT or Bridged network adapter	

**Note:** PC Desktops/Laptops will be able to run small to medium Labs. Performance and quantity of nodes per lab depend on the type of nodes deployed in the lab.

#### Example:

IOL image-based nodes: up to 120 nodes per lab vIOS image-based nodes: up to 20-40 nodes per lab CSR image-based nodes: up to 10 per lab

#### 2.1.3 Virtual Server system requirements

#### **Prerequisites:**

CPU: Intel Xeon CPU supporting Intel® VT-x with Extended Page Tables (EPT) Operation System: VM Ware ESXi 6.7 or later

Server HW requirements			
CPU	Recommended CPU 2x Intel E5-2650v4 (48 Logical processors) or better supporting Intel® VT-x with Extended Page Tables (EPT) Minimum CPU is any Intel Xeon CPU supporting Intel® VT-x with Extended Page Tables (EPT)		
RAM	128Gb		
HDD Space	2Tb		
Network	LAN Ethernet		
	EVE Virtual machine requirements		
CPU	2/24 (48) (Number of processors/Cores per socket) Set Expose hardware assisted virtualization to the guest OS to ON (checked) and set Expose IOMMU to the guest OS to ON (checked)		

RAM	64Gb or more
HDD	800Gb or more
Network	vSwitch/VMnet

**Note:** Performance and quantity of nodes per lab depends from the type of nodes used in the lab.

Example: 120 IOL image-based lab 20 CSRv1000 image-based nodes per lab

#### 2.1.4 Dedicated Server (bare metal BM) system requirements

#### **Prerequisites:**

CPU: Intel Xeon CPU supporting Intel® VT-x with Extended Page Tables (EPT) Operation System: Ubuntu Server 22.04 LTS x64

Server HW requirements		
CPU	Recommended CPU Intel E5-2650v4 (48 Logical processors) or better supporting Intel® VT-x with Extended Page Tables (EPT) Minimum CPU is any Intel Xeon CPU supporting Intel® VT-x with Extended Page Tables (EPT)	
RAM	128Gb	
HDD Space	2Tb	
Network	LAN Ethernet	

Note: Performance and quantity of nodes per lab depends from type of nodes used in the lab.

#### 2.1.5 Nodes per lab calculator

It is recommended to use the "nodes per lab calculator" to achieve best performance and avoid overloading your EVE system.

https://www.eve-ng.net/index.php/download/#CALC

#### 2.1.6 EVE Management Networks

NOTE: Please make sure if these subnets are NOT used in your network outside of EVE.

172.29.129.0/24 (NAT Interface) 172.29.130.0/24 (Cluster VPN subnet, wg0 interface) 172.17.0.0/16 (Dockers consoles)

#### To change these networks please refer chapter 7.4.1

#### 2.2 Supported virtualization platforms and software

- VMware Workstation 16.0 or later
- VMware Player 16.0 or later
- VMware ESXi 6.7 or later
- Ubuntu Server 22.04 LTS as platform for bare metal

- Google Cloud Platform
- AMD CPU based PC or Server (the Newest AMD CPU versions are supported)

### 2.3 Unsupported hardware and systems

#### The following are currently not supported officially:

- VirtualBox virtualization
- Citrix XenServer
- Microsoft HyperV
- Proxmox
- MAC OSX M1, M2, M3 CPU

# **3** Installation

#### 3.1 VMware Workstation or VM Player

#### 3.1.1 VMware Workstation VM installation using ISO image

Download EVE-NG Professional Full ISO distribution image: <a href="https://www.eve-ng.net/index.php/download/">https://www.eve-ng.net/index.php/download/</a>

#### 3.1.1.2 EVE-NG VM Installation steps

#### **EVE VM Installation from ISO has 3 Phases**

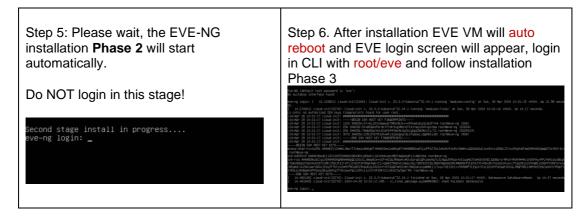

#### Phase 1 (Ubuntu installation)

#### EVE VM Installation Phase 2 (EVE-NG installation)

#### EVE VM Installation Phase 3 (Management IP setup and updates)

Step 7: Setup EVEs Management IP address. A Static IP address setup is preferred. Internet and DNS reachability is a MUST	Step 8: Internet and DNS reachability is a MUST After your EVE is rebooted,	
Follow steps in section:	Login to EVE CLI and type:	
<b>3.5.1</b> for static IP, <b>3.5.2</b> for DHCP IP	apt update apt upgrade	

If required, follow steps in section: 5.1, 5.2

*NOTE:* Verify your EVE-NG server installation, type "dpkg -l eve-ng-pro" command, it must display latest EVE Pro version

Step 9: Proceed to section 4 "Obtain EVE-NG Professional license"

- IMPORTANT NOTE: You must prepare and upload at least a couple of images to start building your labs. Refer to section 16
- 3.2 VMware ESXi
- 3.2.1 VMware ESXi EVE VM installation using ISO image

Download EVE-NG Professional Full ISO distribution image: <a href="https://www.eve-ng.net/index.php/download/">https://www.eve-ng.net/index.php/download/</a>

- IMPORTANT NOTE: Make sure that you have set Security Policy (Promiscuous mode, forged transmits and MAC changes) settings on the vSwitch and Port group to Accept.
- IMPORTANT NOTE: For EVE VMs running on ESXi, with NIC Teaming Network, please follow the steps below to edit the reverse path settings
  - From the Navigator window select Manage > System > Advanced settings.
  - Scroll down or use the search bar to go to the Net.ReversePathFwdCheckPromisc option.
  - Select Net. ReversePathFwdCheckPromisc and click Edit option.
  - In the Edit option Net. ReversePathFwdCheckPromisc window update the New value field to 1 and click Save.
- IMPORTANT NOTE: For EVE VMs running on ESXi, with NIC Teaming Network, managed by vCenter and VDS Network please follow the steps below to edit the reverse path settings
  - From the Side Inventory select the ESXi host where the EVE VM is installed Configure > System > Advanced System Settings.
  - Edit Advanced System Setting
  - Scroll down to find Net. ReversePathFwdCheckPromisc option.

Net.ReversePathFwdCheckPromisc

1

- In the Edit option Net. ReversePathFwdCheckPromisc window update the New value field to 1 and click Save.
- Reboot ESXi host
- Select the VDS Workgroup used for EVE VM networking
- Edit VDS Workgroup security setting to allow promiscuous traffic

Distributed Port Group - Edit Settings DPortGroup-VLAN10

3.4.3 Network MTU settings and firewall rules for GCP

If your GCP VM is expected to be as a part of EVE-NG Cluster system please complete the MTU network settings and firewall rules setup before creating the instance.

If you do not plan EVE-NG VM to be as part of EVE Cluster, continue to: 3.4.5

NOTE: GCP VM by default has MTU 1460 set for the interfaces by default. You may require to set VM machine custom MTU (1500) which is commonly known default setting for ethernet. The MTU settings on the GCP interface must be adjusted if you want it to use as the part of EVE-NG cluster system.

Open the google cloud shell and press: "START CLOUD SHELL"

Copy the following commands in SHELL Cloud console:

destination-ranges=0.0.0.0/0

###### Create 1500 MTU subnet #####
gcloud compute networks create mtu1500 --subnet-mode=auto --mtu=1500
--bgp-routing-mode=regional
###### Create 1500 MTU firewall rules #####
gcloud compute firewall-rules create wireguard-in --direction=INGRESS
--priority=1000 --network=mtu1500 --action=ALLOW --rules=udp:60569 -source-ranges=0.0.0.0/0
gcloud compute firewall-rules create wireguard-out --direction=EGRESS
--priority=1000 --network=mtu1500 --action=ALLOW --rules=udp:60569 --

gcloud compute firewall-rules create ssh-in --direction=INGRESS -priority=1000 --network=mtu1500 --action=ALLOW --rules=tcp:22 -source-ranges=0.0.0.0/0

gcloud compute firewall-rules create ssh-out --direction=EGRESS -priority=1000 --network=mtu1500 --action=ALLOW --rules=tcp:22 destination-ranges=0.0.0.0/0

#### Firewall rules summary:

Name	Туре	Targets	Filters	Protocols/ports	Action	Priority	Network <b>↑</b>	Logs
ssh-out	Egress	Apply to all	IP	tcp:22	Allow	1000	mtu1500	Off
wireguard- out	Egress	Apply to all	IP	udp:60569	Allow	1000	<u>mtu1500</u>	Off
ssh-in	Ingress	Apply to all	IP	tcp:22	Allow	1000	mtu1500	Off
<u>wireguard-</u> in	Ingress	Apply to all	IP	udp:60569	Allow	1000	<u>mtu1500</u>	Off

#### 3.4.4 Optional: GCP MTU 1500 Firewall rules for native console use

Open the google cloud shell and press: "START CLOUD SHELL"

Copy the following commands in SHELL Cloud console:

###### Create MTU 1500 firewall rules for native console use #####

gcloud compute firewall-rules create allow-all-in --direction=INGRESS
--priority=1000 --network=mtu1500 --action=ALLOW --rules=tcp:0-65535
--source-ranges=0.0.0.0/0

gcloud compute firewall-rules create allow-all-out --direction=EGRESS --priority=1000 --network=mtu1500 --action=ALLOW --rules=tcp:0-65535 --destination-ranges=0.0.0.0/0

#### Summary FW rules.

Name	Туре	Targets	Filters	Protocols/ports	Action	Priority	Network 🕇	Logs
allow-all- out	Egress	Apply to all	IP	tcp:0-65535	Allow	1000	<u>mtu1500</u>	Off
allow-all- in	Ingress	Apply to all	IP	tcp:0-65535	Allow	1000	<u>mtu1500</u>	Off

#### 3.4.5 Creating VM

Step 1: Navigate: Navigation Menu/Compute Engine/VM Instances and press "CREATE INSTANCE"

	Google Cloud	\$• EV	E Test 💌	Search (/) for resources, docs, products and more Q Search	🔸 b 🕕 🕅 🕴 🕛

### 3.4.6 EVE-NG Pro installation

Step 1: Click VM Instances to get access SSH to your VM, Connect to the VM with the first option "Open in browser window"

Step 2: Launch installation with:

Type the below command to become root: sudo -i

Start EVE-PRO installation

```
wget -0 - https://www.eve-ng.net/jammy/install-eve-pro.sh | bash -i
```

Step 3: Update and upgrade your new EVE-Pro apt update

apt upgrade **Confirm with Y** 

Step 4. Reboot EVE. Allow some time for reboot and then press "Reconnect"

#### Step 5: IMPORTANT: Setup IP

Once the IP wizard screen appears, press ctrl +c and type the below command to become root: sudo -i

	Root         Password         k           Type the Root         X         1           10002000000000000000000000000000000000
eveproscyêeve-pros-8 sudo =1	

Now follow the IP setup wizard. **IMPORTANT**: set IP as **DHCP**!

Step 6: Reboot

Step 7: Dockers installation. After EVE is rebooted, reconnect the SSH session:

 Type command to become root:

 sudo -i

 Type command to update EVE

 apt update

 Type command to Install Dockers

 apt install eve-ng-dockers

 Totest and to the stall of the stall of

### 3.4.7 Access to Google Cloud EVE-PRO

Use your public IP for accessing EVE via https.

= Filter VM ins	stances					Columns •
Name ^	Zone	Recommendation	In use by	Internal IP	External IP	Connect
🥑 eve-pro	europe-west2	2-c		10.154.0.2 (nic0)	35.246.119.90 🛛	SSH -

Default web login: admin/eve

#### 3.4.8 Optional: GCP MTU 1460 Firewall rules for native console use

NOTE: If your GCP VM is using default network (MTU1460), then for native console use, you have to create following FW rules.

Open the google cloud shell and press: "START CLOUD SHELL"

Copy the following commands in SHELL Cloud console:

```
###### Create default network (MTU 1460) Firewall rules for native
console use ######
gcloud compute firewall-rules create eve-all-out --direction=EGRESS -
-priority=1000 --network=default --action=ALLOW --rules=tcp:0-65535 -
-destination-ranges=0.0.0.0/0
```

gcloud compute firewall-rules create eve-all-in --direction=INGRESS -priority=1000 --network=default --action=ALLOW --rules=tcp:0-65535 -destination-ranges=0.0.0.0/0

#### Firewall rules summary:

Name	Туре	Targets	Filters	Protocols/ports	Action	Priority	Network 个	Logs
eve-all-out	Egress	Apply to all	IP	tcp:0-65535	Allow	1000	default	Off
eve-all-in	Ingress	Apply to all	IP	tcp:0-65535	Allow	1000	default	Off

## 3.5 EVE Management IP Address setup

A NOTE: Please make sure if these subnets are NOT used in your network outside of EVE.

172.29.129.0/24 (NAT Interface) 172.29.130.0/24 (Cluster VPN subnet, wg0 interface) 172.17.0.0/16 (Dockers consoles)

1. To change these networks please refer chapter 7.4.1

3.5.1 Static Management IP address setup (preferred)

IMPORTANT NOTE: Internet and DNS must be reachable from your Server. The EVE-NG Pro requires internet access to get updates and validate EVE-NG Pro License key. DNS must resolve names!

The steps below will walk you through the network setup and assign a static management IP for EVE.

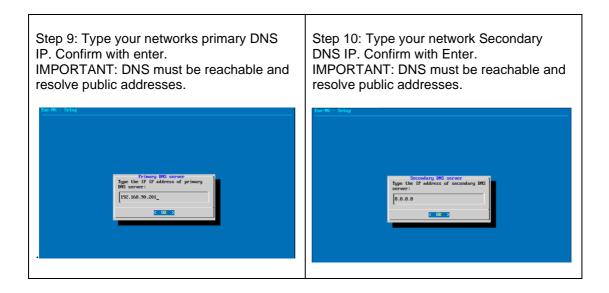

Step 3: Choose your EVE VMs hostname. By default, it is <b>eve-ng</b> . You can leave it as it is. Confirm with enter	Step 4: Type your domain name for your EVE VM. By default, it is example.com. The default value can be used as well. Confirm with enter
Hostowne	Type the DMS dows in wave
Type the short hostowne for the	Type the DMS dows in wave for the
system:	system:
eve-mg	eve-mg.net
c 00	C OC D

### 3.5.2 DHCP Management IP address setup

IMPORTANT NOTE: Internet and DNS must be reachable from your Server. The EVE-NG Pro requires internet access to get updates and validate EVE-NG Pro License key. DNS must resolve names!

▲ IMPORTANT NOTE: EVE Docker stations for html console access are using network 172.17.0.0/16. Please avoid use this network on the EVE management or other clouds or interfaces.

The steps below will walk you through the network setup and assign a management IP for EVE via DHCP.

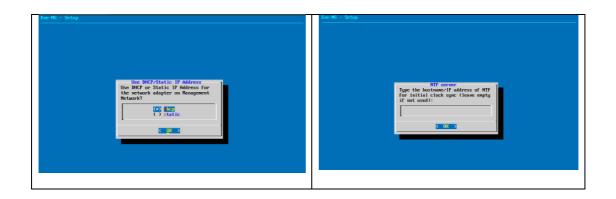

Step 5: Using the arrow keys, select the option "dhcp", confirm your selection with the space key, followed by enter	Step 6: Type your preferred NTP server IP. It can be left empty as well; in this case, your EVE VM will automatically assign the time from its host.
--	---

#### 3.5.3 Internet proxy setup

Step 1: If you have a proxy in use for your Internet, login into your EVE WEB GUI using your EVE IP <u>https://aaa.aaa.aaa.aaa</u>

Default username: admin Password: eve

Step 2: Select Tab: System/System Settings

	Professional	🎢 Main	🖋 Management 🗸	🖻 System 🗸	<li>Inform</li>	nation <del>-</del>	🛈 Licensing 🗸	©2019 Eve-NG
🚓 File manage	r Current po	osition / roo		😤 System S 🛈 System st				
New Name				🗘 System la 🗙 Stop All N		Add fold	er	

Step 3: Enter your Proxy IP and Port following by "Submit". For authenticated Proxy, use your username and password.

Radius Server #1	IP		Port		Secret	
	0.0.0.0		1812		•••••	
Radius Server #2	IP	IP			Secret	
	0.0.0.0		1812	\$	•••••

Femplate visibility Disk critical size Html 5 terminal setting Management Interface setting	Minimal free space (GB) 5 Color scheme gray-black Font name monospace Font size 12	~				

#### 3.5.4 Reset Management IP settings

If for any reason you need to change these settings after the installation, you can rerun the IP setup wizard. Type the following command in the CLI and hit enter:

rm -f /opt/ovf/.configured

Then type:

su -

Once you log into the CLI again, EVE will go through the network setup again. Please follow the steps in section **3.5.1** for Static IP or **3.5.2** for DHCP IP.

### 3.6 Native telnet console management setup

If you prefer to use a natively installed telnet client to manage nodes inside EVE, follow the steps below:

### 3.6.1 Windows Native Console

Step 1: Download the EVE Windows Client integration pack:	Step 2: Install it as administrator
---	-------------------------------------

http://www.eve-ng.net/downloads/windows- client-side-pack	Open Run as administrator Troubleshoot compatibility Pin to Start 7-7in
<form></form>	Step 4: Continue with Next. When it asks to choose Ultra VNC Options, only leave the UltraVNC Viewer checked, the rest is not needed.
Step 5: Continue with Next and finish the installation.	

By default, EVE Windows Client Integration will install Putty as your Telnet Client. The default location for the EVE Windows Client Integration software and .reg files is: "C:\Program Files\EVE-NG"

#### Set the default telnet program manually in Windows 10. Example: Secure CRT

Step 1: Go to: Windows Settings/Apps/Default Apps/Choose Default Apps by Protocol

Step 2: Set your default Telnet program:

inside EVE via telnet, the browser will ask to choose the telnet program. If you have prepared your default telnet program with the instructions above, you have to choose your default Telnet program.

Example: Firefox browser:

TELNET

Launch Application			
This link needs to be opened with an applica Send to:	tion.		
SecureCRT Application			
Choose other Application	oose		
<u>Remember my choice for telnet links.</u>			
Cancel Op	en link		

Set your default application, check the box "Remember my choice telnet links" and click Open link

### 3.6.2 Linux Native Console

The steps below will show how to setup the native consoles pack for Linux Mint 18 (Ubuntu):

Step 3: Scroll down to the installation part Installation Ubuntu and derivatives You can install eve-ng-integration from the official PPA: sudo add-apt-repository ppa:smartfinn/eve-ng-integration sudo apt-get update sudo apt-get install eve-ng-integration	Step 1: Go to the EVE Linux Side integration pack download page: <u>http://www.eve-ng.net/downloads/linux- client-side</u>	Step 2: Open the link to GitHub https://github.com/SmartFinn/eve-ng- integration
	Installation Ubuntu and derivatives You can install eve-ng-integration from the official PBA: sudo ad-apt-repository ppassmartfinn/eve-ng-integration sudo apt-get update	

Step 4: Login as root to your Linux system and enter the commands below:

NOTE: An internet connection is required. Enter each command line below one after the other

sudo add-apt-repository ppa:smartfinn/eve-ng-integration

sudo apt-get update

sudo apt-get install eve-ng-integration

▲ For other Linux native console setup options please refer to: <u>https://github.com/SmartFinn/eve-ng-integration</u>

#### 3.6.3 MAC OSX Native Console

Download the EVE MAC OSX Client integration pack and install it:

https://www.eve-ng.net/index.php/download/#DL-OSX

# 3.7 Login to the EVE WEB GUI

EVE PRO is using https 443. Login to the EVE management UI:

https://<your\_eve\_ip>/

Default user access:

#### User: admin

#### Password: eve

- A NOTE: You can change your EVE Admin password, please refer to section 7.3.1.2
- IMPORTANT NOTE: You must prepare and upload at least a couple of images to start building your labs. Refer to section 17

# 4 EVE-NG Professional Licensing

IMPORTANT NOTE: Internet and DNS must be reachable from your Server. The EVE-NG Pro requires internet access to get updates and validate EVE-NG Pro License key. DNS must resolve names!

EVE-NG Professional and Learning Centre editions require purchasing and uploading a license to activate its features. Licenses are based on an annual subscription.

EVE-NG permits up to **32000 accounts** to be created but restricts the number of simultaneous sessions per role to the licensed amount. To increase the number of active sessions, please purchase additional licenses on top of the base license as shown below.

Definition: Simultaneous session (1 license) means one active connection to the EVE-NG Web GUI.

License information	<u>Example1 EVE-Professional:</u> The license information page shows 2 Admin accounts. This means 2 Admin role-based
	accounts can be logged into the Web GUI simultaneously. If a
Expirity Date: 20190507	third Admin account logs into the Web GUI, the first active
Admins: 2	Admin session will be disconnected. Please note that the first
Editors: 0	Admin's labs will keep running. EVE-NG PRO can have up to
Users: 0	128 accounts, but active sessions to the Web GUI are restricted to the number of purchased licenses.

<u>Example2 EVE Learning Centre:</u> The license information page shows 2 Admin and 3 Lab-user role accounts. This means 2 Admin and 3 User accounts can be logged into the Web GUI simultaneously. If a fourth User account or third Admin account logs into the Web GUI, the first User or Admin session will be disconnected. Started labs will keep running. EVE-NG Learning Center can have up to 32K accounts, but active sessions to the Web GUI are restricted by the number of licenses purchased.

# 4.1 EVE-NG Professional Base license

#### EVE-NG Professional Edition - 1 Year License https://www.eve-ng.net/index.php/buy/

EVE-NG PRO features multi user support and assigns all accounts as Administrators. The license allows for 2 simultaneous users.

For EVE-PRO Administrator role permissions, please see section 4.4.

# 4.2 EVE-NG Learning Centre licenses

EVE-NG Learning Centre Edition - 1 Year License

https://www.eve-ng.net/index.php/buy-corporate/

EVE-NG LC features multi user support and assigns accounts as Administrators, Lab-Editors or Lab-Users.

The first minimal Base A license allows for 2 simultaneous Admin users. It is necessary to use an Administrator account to create or manage EVE LC and other user's role-based accounts.

eve	EVE-NG Professional Base - 1 Year License This license unlocks all Pro features and two active	1 Minimum Mandatory Base	99,00 €

Contraction of the Contraction	Optional Licenses EVE-NG PRO Administrator - 1 Year License This license unlocks one additional active session for the Administrator role. The Administrator role can manage everything in EVE- NG without restriction. This includes creating, deleting, and modifying all folders labs, nodes and accounts. The Administrator is the only role that can create or modify accounts.	- 1 +	99,00 €
Станке	EVE-NG PRO Lab Editor - 1 Year License This license unlocks one additional active session for the Editor role. The Editor role is restricted to a personal folder and is authorized to create, delete, or modify additional folders, labs, and nodes within it.		350,00 € 👘
	<b>EVE-NG PRO Lab User - 1 Year License</b> This license unlocks one additional active session for the User role. The User role is restricted to a personal folder and is only authorized to start, stop, and wipe nodes. An Administrator account is required to manage folders and labs within a Users folder.		300,00 €

#### EVE-NG PRO – A Base License (Mandatory)

This license unlocks all Pro features and two active Administrator accounts sessions. This license is mandatory for EVE LC edition.

The following licenses below can vary per your needs.

#### EVE-NG PRO - Administrator License

This license unlocks one additional active session for the Administrator role. The Administrator role can manage everything in EVE-NG without restrictions. This includes creating, deleting, and modifying all folders, labs, nodes and accounts.

The Administrator is the only role that can create or modify accounts.

#### EVE-NG PRO – Lab-Editor License

This license unlocks one additional active session for the Lab-Editor role. The Lab-Editor role is restricted to a personal and the Shared folder and is authorized to create, delete, or modify additional folders, labs, and nodes within them.

#### EVE-NG PRO – Lab-User License

This license unlocks one additional active session for the Lab-User role.

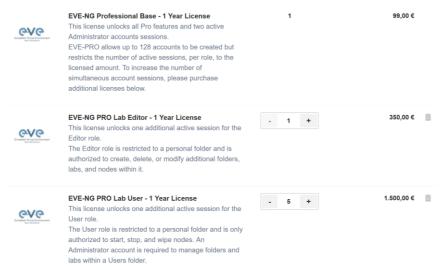

The Lab-User role is restricted to a personal and the Shared folder and is only authorized to start, stop, and wipe nodes. An Administrator account is required to manage folders and labs within a User's personal folder.

*Example: EVE Learning Centre Licensing* for 1 Teacher and a 5 Students class. Licence model below includes:

- Two administrator accounts, necessary for EVE LC labs and other user account management
- One Lab-Editor-role based account, assigned to the teacher to create/manage labs and assign them to the Shared folder for Students use. The Lab-Editor role is restricted to a personal folder and is authorized to create, delete, or modify additional folders, labs, and nodes within it.

Optional: If wanted / needed, the Lab-Editor account for the teacher can also be replaced by an Administrator account instead.

• Five Lab-User role-based Student accounts allowing running a class with 5 simultaneous students connected to the EVE HTML GUI.

For EVE-LC role permissions, please see section 4.4.

# 4.3 EVE-NG Corporate licenses

Essentially, this is EVE Learning Centre edition with Lab-Editor role-based accounts only. This is recommended for corporate use to allow full permissions for EVE labs but to restrict being able to manage other user accounts or labs. The Lab-Editor role is restricted to a shared and a personal folder and has permissions to create, delete, or modify additional folders, labs, and nodes within them.

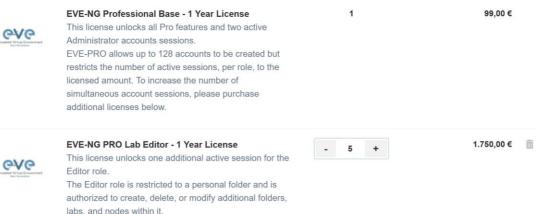

#### EVE-NG Learning Centre Edition - 1 Year License https://www.eve-ng.net/index.php/buy-corporate/

EVE-NG Corporate features multi user support and assigns accounts as Administrators or Lab-Editors.

The first (mandatory) Base A license allows for 2 simultaneous Admin users. It is necessary to have an Administrator account to create or manage EVE LC and other user's role-based accounts.

*Example: EVE Corporate Licensing* for 5 Lab-Editor users. License model below includes:

- Two administrator accounts necessary for EVE Corporate labs and other user accounts management (Mandatory Base license)
- Five Lab-Editor role-based accounts. The Lab-Editor role is restricted to a shared and a personal folder and has permissions to create, delete, or modify additional folders, labs, and nodes within them.

EVE Corporate role rights, please follow section 4.4.

# 4.5 License purchasing and activation

**IMPORTANT NOTE**: Internet and DNS must be reachable from your Server. The EVE-NG Pro requires internet access to get updates and validate EVE-NG Pro License key. DNS must resolve names!

- A Before purchasing a license, the customer must have **EVE-NG Professional** installed and readily accessible.
- A Recommended browser for license operations are: Chrome or Mozilla Firefox

A You must be logged in to the EVE WEB GUI as Administrator.

Step 1: Obtain your license request from the Licensing tab of the top menu of the EVE PRO WEB GUI. License requests will work only if the host machine (and hypervisor if running a VM) has **Intel VT-x/EPT** enabled! (See section **3** for details)

Step 2: Copy the content of the license request and keep it ready for the order process at later **Step 6**. Orders without a license request cannot be processed.

Step 3: Go to the EVE PRO or Learning Centre Purchase Portal and choose your Licenses and quantity.

Licenses that are unnecessary for your EVE Learning Centre or Corporate Edition licensing needs, can simply be deleted from your order by clicking on the cross next to them to remove them. Refer to sections: **4.2** and **4.3** 

**EVE-PRO Purchase Portal** 

< Back to shopping

**EVE-Learning Centre or Corporate Purchase Portal** 

Step 4: Choose your preferred payment method. We currently support VISA, Mastercard, Bank/Wire transfer and PayPal.

Step 5: Complete the order form. If your license is for commercial/company use, you must select Company option.

Billing Information		
	Licensed to:	Person Company
	First name*:	
	Last name*:	
	Address*:	

Step 6: At the end please paste your **license request content (including header and footer lines)** from Step 2 and Please read and confirm the <u>EULA agreement</u>, which contains vital

information about licenses. For companies, if necessary, in the Order Notes you can add additional information/reference, e.g. for your accounting department.

Additional Information	
Order Notes	
Order Notes	
EVE-NG PRO A Base license	
License Request*	
LICENSE FILE DATA	
Accept EULA*	

Step 7: After a while (usually 10-30 mins), your license is sent to the E-Mail used in the order form.

- ▲ IMPORTANT: Before loading the purchased license, make sure your EVE has Internet access. Your EVE DNS settings must be configured properly to resolve the FQDN. Internet connection is required to validate your EVE license with our EVE-NG license server.
- ▲ IMPORTANT: If your EVE internet is using Proxy, make sure you have set the proxy settings described in section 3.5.3
- ▲ Offline EVE Pro license is supported for Bare EVE installs only. (Dedicated EVE server). VM Ware and Cloud environment EVE installs require Internet connection.

Step 8: Copy ALL Content of your received License. Important: License key mut include header and bottom lines as well.

Step 9: On your EVE WEB GUI, click on License Upload,

@\/@		🚮 Main	🗲 Management 🗸	🗐 System 👻	Information -	🕯 Licensing 🗸	©2018 Eve-NG

New Name						📧 License Up	load

Paste your licence and click on Upload

# 4.6 License deactivation

If you decide to deactivate EVE-PRO license on the host, please follow the steps below:

▲ Go to EVE CLI and type:

cd /opt/unetlab/html/
rm eve-ng.lic
cp eve-ng.nolic eve-ng.lic

# 4.7 License Rehosting.

If you decide to re-install EVE-PRO or move it to another host, please follow the steps below:

#### A Pre-requisites:

- EVE must have internet access!
- Only ONE EVE host must be turned ON and connected to the internet, do NOT have more than one EVE with the same license turned on at the same time!

Step 1. Make sure that you have only ONE EVE-PRO instance with this license running.

Step 2. Make sure you have unrestricted Internet access with a properly configured DNS server from your EVE server.

Step 3. Load your purchased license onto EVE server you want to rehost to.

Step 4. Reboot your new EVE

Step 5. Wait approximately one hour for the licence validation process to finish on the host.

▲ **NOTE:** The re-hosted EVE server must have internet access to periodically validate the license. EVE receives a token with a licence validity time of 24 hours. During those 24 hours, the re-hosted EVE can be used offline. After 24 hours the token time expires and you have to get EVE online again (for approximately 30 minutes) to receive a new token.

# 5 EVE-NG Professional Update & Upgrade

A Prerequisites: Internet access and working DNS on your EVE-NG is required.

Verify your internet reachability with named ping. Example: ping www.google.com

ping www.google.com

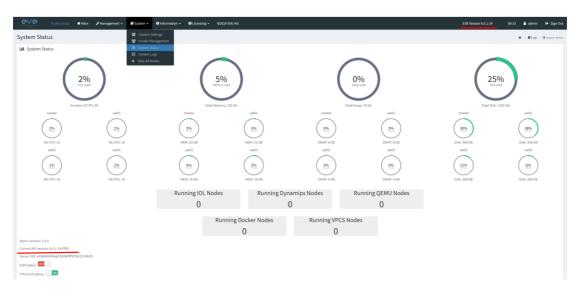

root@eve_ng:~# ping www.google.com
PING www.google.com (216.58.207.228) 56(84) bytes of data.
64 bytes from arn09s19-in-f4.1e100.net (216.58.207.228): icmp_seq=1 ttl=58 time=9.11 ms <sup>a</sup>
64 bytes from arn09s19-in-f4.1e100.net (216.58.207.228): icmp_seq=2 ttl=58 time=19.5 ms
64 bytes from arn09s19-in-f4.1e100.net (216.58.207.228): icmp_seq=3 ttl=58 time=9.50 ms
64 bytes from arn09s19-in-f4.1e100.net (216.58.207.228): icmp_seq=4 ttl=58 time=9.56 ms
64 bytes from arn09s19-in-f4.1e100.net (216.58.207.228): icmp_seq=5 ttl=58 time=9.56 ms

If your ping is success, follow next step for update. If named ping has no success, please verify your DNS IP assigned for EVE or firewall. Some cases ping can be blocked by FW, but Internet and DNS are capable to make update/upgrade.

# 5.1 EVE-NG Professional Update

It is strongly recommended to keep your EVE-NG up to date. To update and upgrade, SSH to your EVE CLI.

To verify your current EVE-NG version, please follow "CLI diagnostic information display commands" in section **15.1.1**. You can verify your current EVE version from the System/System Status tab on the top menu of the WEB GUI as well.

The newest version of EVE-NG can be verified by checking the official website: <u>http://www.eve-ng.net</u>. For update to the newest EVE-NG Professional version please follow the steps <u>https://www.eve-ng.net/index.php/1845-2/</u>

Type the below commands followed by Enter

#### apt update

In case the prompt asks to confirm with Y/N, answer Yes.

# 5.2 EVE-NG Professional Upgrade

▲ **IMPORTANT NOTE:** Make sure you have stopped all your running labs. All nodes in the EVE must be stopped before upgrade!

For upgrade to the newest EVE-NG Professional version please follow the steps <u>https://www.eve-ng.net/index.php/1845-2/</u>

Type commands followed by Enter

apt upgrade

In case the prompt asks to confirm with Y/N, answer Yes.

**IMPORTANT NOTE:** If you are upgrading EVE PRO from older version, the installation may ask you to confirm additional! Information:

Configuration file '/etc/issue'
==> Modified (by you or by a script) since installation.
==> Package distributor has shipped an updated version.
What would you like to do about it ? Your options are:
Y or I : install the package maintainer's version
N or 0 : keep your currently-installed version
D : show the differences between the versions
Z : start a shell to examine the situation
The default action is to keep your current version.
<pre>*** issue (Y/I/N/0/D/Z) [default=N] ?</pre>
Progress: [ 0%] [

Answer for prompt above is "N"

Configuring grub-pc
A new version (/tmp/grub.tj7zRCNt3z) of configuration file /etc/default/grub is available,
but the version installed currently has been locally modified.
What do you want to do about modified configuration file grub?
install the package maintainer's version
keep the local version currently installed
show the differences between the versions
show a side-by-side difference between the versions
show a 3-way difference between available versions
do a 3-way merge between available versions (experimental)
start a new shell to examine the situation
<0k>

Answer for grub-pc version is: "Keep the local version currently installed"

After the completion of the update and upgrade, reboot your EVE Server. Type the following command and hit enter.

reboot

**IMPORTANT NOTE:** Do NOT make EVE updates or upgrades from within the HTML5 Desktop console!

# 6 Types of EVE management consoles

▲ IMPORTANT NOTE: EVE Console TCP ports. EVE Pro uses a dynamic port range between 1-65000. Dynamic means that every time you start a node on the lab, EVE assigns any free port from this range for Telnet, VNC or RDP access. Static TCP port assignment for Telnet sessions is not available in EVE PRO.

EVE Pro supports three different console types.

### 6.1 Native console

EVE Native console option requires locally installed software to access your lab nodes. To use the Native console option, you must have Administrator rights on your PC and ensure the TCP port range 1-65000 is not blocked by a firewall or antivirus software.

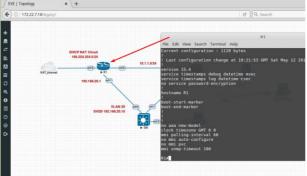

### 6.1.1 Native Console: telnet

**Windows OS:** You can use your preferred telnet program like Putty, SecureCRT or others. Example: Putty as native telnet client on Windows. To setup Windows native telnet client please follow section 3.6.1

**Linux OS:** You can use your preferred telnet program like the Native Terminal, SecureCRT, or others.

Example: Telnet client from the native terminal on Linux Mint. To setup Linux native telnet client please follow section 3.6.2

**MAC OSX:** You can use your preferred telnet program like the native Terminal, SecureCRT, or others.

Example: Telnet client from the native terminal on MAC OSX. To setup MAC OSX native telnet client please follow section 3.6.3

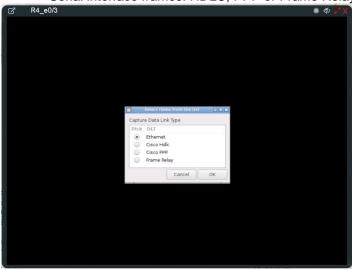

### 6.1.2 Native Console: Wireshark

EVE Professional has an integrated Wireshark Docker station. This allows live captures without having Wireshark installed on the client machine. The EVE Capture console uses an integrated HTML session.

Right click on the node you wish to capture, choose capture and the interface. Capture Session will open in a new browser window.

EVE-PRO supports packet captures on ethernet and serial interfaces. Select the interface frame type which will be captured:

- Ethernet for Ethernet, Fast Ethernet, Gigabit Ethernet.
- Serial interface frames: HDLC, PPP or Frame Relay.

Integrated HTML RDP for Wireshark capture

Example: RA-CE live interface G0/1 capture.

To save the captured file on your local PC, please refer to section 11.1

### 6.1.3 Native Console: VNC

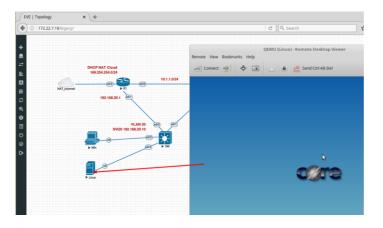

**Windows OS:** Recommended and tested is UltraVNC but any other compatible one can be used.

Example: UltraVNC as Native VNC client on Windows. To setup Windows native VNC client please follow section 3.6.1

**Linux OS:** Remote Desktop Viewer for VNC Sessions. Example: Remote Desktop Viewer for VNC sessions on Linux Mint. To setup Linux native Remote Desktop Viewer please follow section 3.6.2

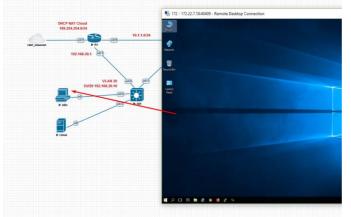

MAC OSX: Preferred VNC program: Chicken VNC

Example: Chicken VNC as Native VNC client on MAC OSX. To setup MAC OSX native RDP Viewer client please follow section 3.6.3

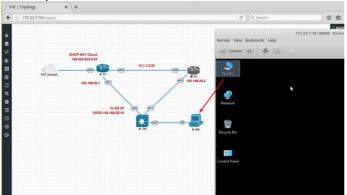

### 6.1.4 Native Console: RDP

**Windows OS:** Windows Native RDP. Example: Windows RDP session to Win10 host in the lab.

Linux OS: Remote Desktop Viewer as RDP session to lab Win10 host.

Example: RDP session to Win10 host in the lab. To setup Linux native Remote Desktop Viewer please follow section 3.6.2

**MAC OSX:** Remote Desktop Viewer as RDP session to lab Win10 host. Example: RDP session to Win10 host in the lab. To setup MAC OSX native RDP Viewer client please follow section 3.6.3

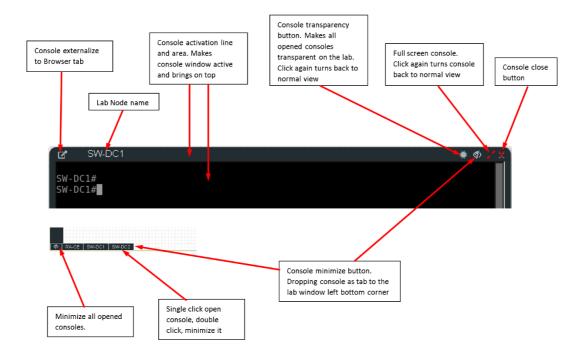

# 6.2 HTML5 console

The EVE PRO HTML5 console provides a clientless solution for managing labs and node sessions. Management is achieved directly through the browser by using the Apache Guacamole HTML5 Engine. It is very convenient for Corporate users with restricted Workstation permissions (Locked Telnet, vnc, rdp).

### 6.2.1 HTML5 Console window functions

### 6.2.2 HTML5 Console: Telnet

HTML5 Telnet console is integrated and opens telnet sessions in the browser.

**Option:** The new Chrome v70.0.3538.110 and higher allows the use of the copy/paste function inside the HTML session. Type in your Chrome browser "**chrome://settings/content/clipboard**" and press **Add** to allow the use of the clipboard extension for your EVE Server: https://your\_ip:443

Settings × +		
← → C       O Chrome   chrome//settings/content/clipboard		
≡ Settings		
	← Clipboard	
	Ask when a site wants to see text and images copied to the clipboard (recommended)	
	Block Add	
	No sites added	
	bb. wolfa

dom.events.testing.asyncClipboard		modified	boolean	true

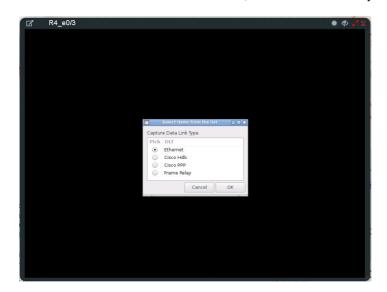

### 6.2.3 HTML5 Console: Wireshark

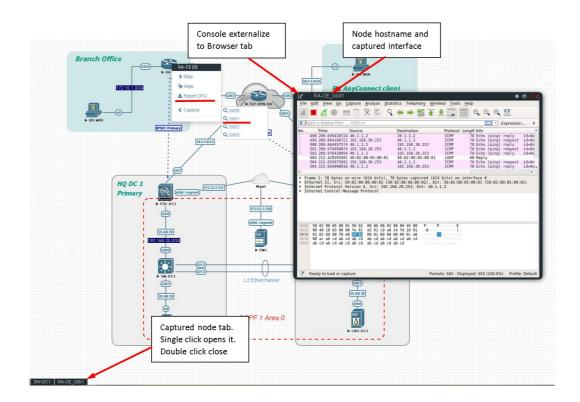

Right click on the node you wish to capture, choose capture and the interface. Capture Session will open in a new browser window.

EVE-PRO supports packet captures on ethernet and serial interfaces. Select the interface frame type which will be captured:

- Ethernet for Ethernet, Fast Ethernet, Gigabit Ethernet.
- Serial interface frames: HDLC, PPP or Frame Relay.

To save captured file to your local PC, please refer section 11.2

### 6.2.4 HTML5 Console: VNC

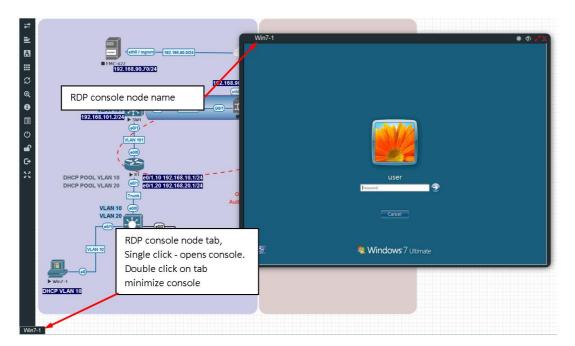

HTML5 VNC console is integrated and opens VNC sessions in the browser.

### 6.2.5 HTML5 Console: RDP

HTML5 RDP console is integrated and opens RDP sessions in the browser. For Windows 7, 8, 10, Windows Server 2012, 2016 please mind the note below.

IMPORTANT NOTE: For all Windows nodes, the console type must be set to RDP-TLS in the node template. RDP-TLS node console option is actually only used with HTML5 RDP sessions.

The username and the password can be configured in the node edit settings. This will allow you resize HTML RDP console without re-login in the windows host.

Example below, Edit node, Win10, Console type rdp-tls, username: user and password: Test123

# 6.3 HTML5 Desktop console

EVE PRO HTML5 Desktop provides a full-featured clientless solution for managing labs and node sessions. Management is achieved directly through the browser by using an integrated docker desktop that is accessed through the Apache Guacamole HTML5 Engine. The docker contains a full featured Linux desktop and is very convenient for corporate users with restricted workstation rights (locked telnet, vnc, rdp).

## 6.3.1 Login to HTML5 Desktop console

Step 1: On your first login to the EVE HTML5-Desktop console, EVE will open a new HTML window session to an integrated Docker management station. On the Desktop you will see another EVE login icon.

Step 2: Double-click the "Link to EVE | Login" icon and log into EVE using NATIVE console.

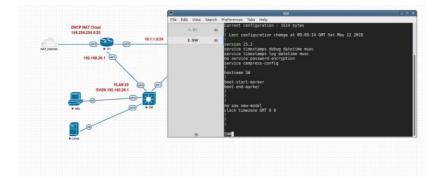

Inside of the integrated docker station, it will open another session to EVE. All features inside of the Docker Desktop will work as you are used to with the Native console.

## 6.3.2 HTML5 Desktop Console: telnet

The integrated management docker station telnet client allows you to telnet to nodes. Telnet sessions are in a tabbed style as shown below.

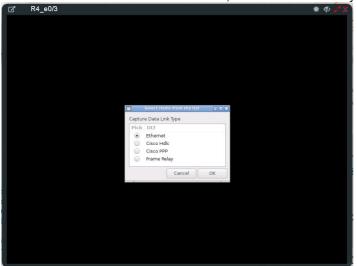

## 6.3.3 HTML5 Desktop Console: Wireshark

Right click on the node you wish to capture, choose capture and select the relevant interface. The capture will open in an RDP session window.

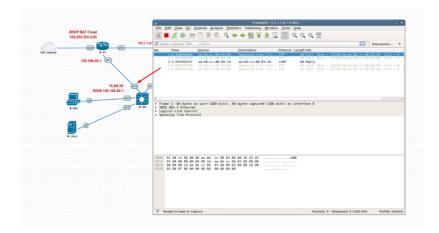

EVE-PRO supports packet captures on ethernet and serial interfaces. Select the interface frame type which will be captured:

- Ethernet for Ethernet, Fast Ethernet, Gigabit Ethernet.
- Serial interface frames: HDLC, PPP or Frame Relay.

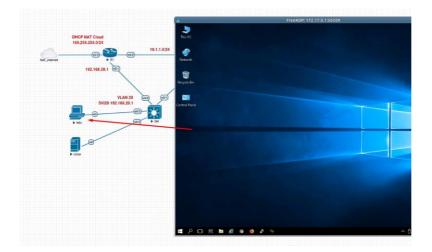

The integrated management docker station Wireshark client allows you to capture and save captured files onto the docker station. For instructions on how to save files to your local PC, please refer to section 11.3

## 6.3.4 HTML5 Desktop Console: RDP

The integrated management docker station RDP client allows you to open Remote Desktop sessions to Windows nodes. For directions on how to transfer files to the local PC, please refer to section 12

## 6.3.5 HTML5 Desktop Console: ThinClient Files exchange

The HTML5-Desktop console offers an amazing feature that allows you to exchange files between your host PC and the EVE management Linux host. Please refer to section 12 for detailed instructions.

# 7.2 Folders and Lab files management

This section will explain how to manage folders and labs on the EVE management page.

## 7.2.1 Folders Management

EVE Professional has three default folders used for various operations. These must not be deleted or renamed (see below).

🗆 🖿 Running	
🗆 🖿 Shared	23 Mar 2018 02:41
🗆 🖿 Users	18 May 2018 12:48

- Admins can create additional folders for any user.
- Editors can create or manage folders in their own profile/folder or within the Shared folder

#### 7.2.1.1 Default folder Running

EVE professional allows a single user to run multiple labs and switch between them with the Running folder.

Example:

- Start a lab and close it
- Open and start another lab and close it

When you open your Running folder, you will see both running labs in it. It is easy to switch between labs.

The example below is showing two running labs in the Running folder.

File manager Current position / root / Running	
New Name	Add folder
<b>b</b>	
test_lab1	18 May 2018 12:58
test_lab2	18 May 2018 13:36

#### 7.2.1.2 Default folder Shared

To manage the Shared folder an Admin or Editor user account is required.

The EVE Professional Shared folder is visible to all EVE users. Admin and Editor Accounts can create folders or labs and place them into the Shared folder.

Shared	18 May 2018 15:16
🔲 🖿 Users	18 May 2018 14:31

Example: An Admin creates a lab and places it into the Shared folder.

The Shared Lab is recommended to set "any" Cluster Satellite

Step 1: Create a lab, refer to section 8.1

Step 2: Select the lab you wish to move to the Shared folder and press **Move to** (or create it in the Shared folder from the start).

<b>File manager</b> Current position / root		Move files to	
	Add folder	Files selected to move:	
Running		test_lab2.unl	
🗆 🖿 Shared	23 Mar 2018 02:41	Current files position /	
🗆 🖿 Users	18 May 2018 12:48	New path	
✓☑ Lest_lab1.unl	18 May 2018 12:58	/ tFolder/	~
test_lab2.unl	18 May 2018 13:36	Running troutery Shared	
		Users	Move Cancel

Step 3: Another user account can use the lab placed by the Admin in the Shared folder

<b>e</b> ∨e		🖶 Main	🗜 Management 🗸	🖴 System 👻	Information +	€2018 Eve-NG	11:45	🛔 test2	🕒 Sign out
👍 File mana	ger Current po	sition / roo	t / Shared						
New Name					Add folder				
• • /	× 8 ¥	± 0	Ø						
•						Choose a lab for more info			
🗆 📑 test_	lab1.unl			18 May 2	2018 12:58				

NOTE: Every user has its own profile; this means that every user has an independent Running folder where this lab runs independently from other users.

- NOTE: Labs can be created and modified (e.g. settings and preconfigs) by an Admin or an Editor user. The User role can use the lab only exactly the way it was configured by an Admin or Editor and is unable to change any settings.
- A NOTE: Admins and Editors can create folders and labs inside the Shared directory

#### 7.2.1.3 Default folder Users

To manage the Users folder, an Admin user account is required.

The Users directory is a default EVE folder where Editors and Users have their personal folders stored.

- mytabi olaci	10 May 2010 14.01
🔲 🖿 Shared	18 May 2018 15:16
🔲 🖿 Users	18 May 2018 14:31

Once an Admin has created a new Editor or User account, EVE will automatically create a folder with the user login name under the default directory Users.

**Example:** Below you can see the folders for the users with the following login names: **test2**, **test3 and test4** 

🛔 File manager	Current position / root /	Users
New Name		Add folder
• • *	* * * * *	3
<b>b</b>		
🗆 🖿 test2		18 May 2018 14:30
🗆 🖿 test3		18 May 2018 14:29
🗆 🖿 test4		18 May 2018 14:31

A NOTE: An Admin can manage any user's folder or place labs in it.

#### 7.2.1.4 Create folder

La File manager Current position / root An Admin or Editor user account is required. Myfolder 🗸 Type the new folder name and click "Add Folder" 🗆 🖿 Running NOTE: Editors can only create folders 🗆 🖿 Shared 18 May 2018 13:49 within their own profile folder or in the Shared folder 7.2.1.5 Delete folder An Admin or Editor user account is required. File manager Current position / root Delete selected items Select the folder you wish to delete and press Delete. 🗆 🖿 Running 🗸 🔄 MyLabFolde 18 May 2018 14:07 NOTE: All folder content will be deleted as 🗆 🖿 Shared 18 May 2018 13:49 🗆 🖿 Users 18 May 2018 12:48 well. test\_lab1.unl

test lab2.unl

NOTE: Editors can only manage their own or the Shared folder

18 May 2018 12:58
18 May 2018 13:36

#### 7.2.1.6 Move Folder

An Admin or Editor user account is required.

Select the folder you wish to move and press the Move to button.

NOTE: Editors can only manage their own or the Shared folder

File manager Current position / root	
New Folder Name Move to	Add folder
🗆 🖿 Running	
🖅 🖿 MyLabFolder	18 May 2018 14:07
🗆 🖿 Shared	18 May 2018 13:49
🗆 🖿 Users	18 May 2018 12:48
test_lab1.unl	18 May 2018 12:58

#### 7.2.2.3 Clone Lab

The Admin or Editor user account is required to clone labs.

A NOTE: An Editor can create labs only within his personal folder or in the Shared folder

The cloning feature provides a very convenient way to duplicate original labs to share with others or base another lab on it.

Cloned labs will copy exported configs (on supported nodes) but will not copy saved states/configurations in Qemu nodes like Windows hosts, Cisco ISE, or other Qemu nodes. Please refer to section **10.3** for more information on configuration export for labs.

Step 1: Select the lab you wish to clone and move the mouse pointer (blue) to that lab, an extra option will appear. Click on Clone.

Step 3: If your user will be Radius authenticated, please Select Radius from Authentication menu. Passwords will be stripped off, because authenticator will look Radius server for user password. How to setup radius server IP and Shared secret please follow Section:16.1

Add New User	
User Name*	
testuser	83
Use only [A-Za-z0-9@]chars	
Authentication radius	
Password	
•••••	( <del>j)</del>
Password Confirmation	
•••••	

Step 4: If your user will be Active Directory (LDAP) authenticated, please enable Active Directory from Authentication Menu. Passwords will be stripped off, because authenticator will look Active Directory server for user password. How to Active Directory server IP please follow

NOTE: Username for Active Director must contain domain at the end of username. Example: labuser@eve.lab

Add New User	
User Name*	
labuser@eve.lab	83
Use only [A-Za-z0-9@]chars	
Authentication active directory $\checkmark$	
Password	
•••••	
Password Confirmation	
•••••	٩

Step 5: If you have bought other EVE licenses, you can choose the preferred user role. For licensing and user roles please refer to section **4** 

JOI	hn Tester				
Role	Administrator 🗸	 _			
	Administrator				
Acco	Editor				
From	User	0	to	-1	0
rion					

Step 6: Set the Console type for the user. If Console type is set exact: Native, HTML or HTM5 Desktop, user after login in the EVE will be forced to use selected Console Type. If Console Type is set to "any", user is able to choose Console type on Login page which Console will be used.

Role La	o User 🗸 🗸	
Console	any 🗸	1
	any	
Lab Nor	native	$\sim$
Satellite	html5	
Satellite	Desktop	

Step 7: **Sticky Lab.** Applies for User role only. Set the specific Lab for the user "sticky lab". After login in the EVE User will directed only to this lab. He cannot close the lab to get in main Lab management page. User can Start/Stop/Wipe lab, as well save his lab work on the lab devices. Follow Section: **7.3.1.5** 

Lab	None 🗸												
	None												
Sate	/Shared/A1.unl												
Acco	/Shared/F SD-WAN Kids Lab.unl												
Fror	/Shared/RS CCNP TS Lab_test.unl	to											
FIO	-1 0	_10	-1			0	0	0	0	0	0	0	0

Step 8: Satellites assignment per user (Editor or User) require Administrator account

#### Satellites

any ×			
any			
master			
SAT01B			

The User Cluster Server value "any" is set by default.

Set the Cluster Satellites for the Lab Editor. This applies for Lab Editor roles. Lab Editor will stick to selected Satellites. Lab Editor will be forced and allowed to use only selected Satellite server or choose between the Satellite servers if it is assigned more than one server. If the Lab has set to use any satellite server, then Lab Editor will be assigned to use lowest satellite ID.

Example: Lab Editor has assigned to use SAT1 (ID1) and SAT2 (ID2). The Lab has set to use "any" satellite. This Editor lab will be automatically assigned to use first available Satellite with lowest ID1, SAT1.

Editor has rights to change Satellite per node for own created Labs.

Editor cannot change satellite assignments for Shared Lab. The Shared Lab is recommended to set "any" Cluster Satellite,

If the Lab is created on the Satellite servers which are NOT in the Lab Editor allowed Satellites list, this lab will not start.

Example: Lab is created to use Master server only, but Lab Editor is allowed to use only SAT1 Server. Lab Editor will not be allowed to start this Lab.

If the Lab contains nodes which are assigned to run on the Satellite server which is NOT in Lab Editor allowed Satellites list, this node will not start.

Example: Lab several nodes are assigned to use Master server only, but Lab Editor is allowed to use only SAT1 Server. Lab Editor will not be allowed to start these nodes.

Set the Cluster Satellites for the Lab User. This applies for Lab User roles. Lab User will stick to selected Satellites. Lab User will be forced and allowed to use only selected Satellite server or servers.

Example: Lab User has assigned to use SAT1 (ID1) and SAT2 (ID2). The Lab has set to use "any" satellite. This Lab User lab will be automatically assigned to use first available Satellite with lowest ID1, SAT1.

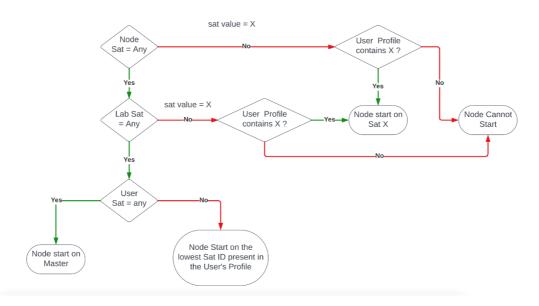

If the Lab is created on the Satellite servers which are NOT in the Lab User allowed Satellites list, this lab will not start.

Example: Lab is created to use Master server only, but Lab User is allowed to use only SAT1 Server. Lab User will not be allowed to start this Lab.

If the Lab contains nodes which are assigned to run on the Satellite server which is NOT in Lab User allowed Satellites list, this node will not start.

Example: Lab several nodes are assigned to use Master server only, but Lab User is allowed to use only SAT1 Server. Lab User will not be allowed to start these nodes.

User Profile and Lab nodes Satellite use hierarchy

Step 9: User time access to the EVE server.

 EVE-NG Users time database is using UTC time zone. To convert user time zone to the UTC, please use online time convert <u>https://dateful.com/convert/utc</u>

#### UTC Time Zone Converter

08:09	NEXT DAY	22:09	
UTC		Honolulu	HST *

- Set the access date and time in UTC timezone From To. If the fields are left empty (untouched), your user will have no time restrictions for accessing the EVE Server. Account validity with time settings is available for Editor and User roles only.
- Admin accounts have no time limit for account validity and resource, and Account Validity time or resource cannot be set.
- To remove date: Delete date, esc, type value "-1"

Account	: Validity					
From	-1		0	to	-1	0
POD*						
1						
Quotas						
CPU	-1	RAM (GB)	-1			

Step 10: The POD number is a value assigned to user accounts automatically. POD numbers are like user profiles inside of EVE and are a unique value for every user Think of PODs like a virtual rack of equipment for each user. Admins can assign a preferred number between 1-128. Please keep POD numbers unique between users!

Step 11: Set user limitation to use eve resources. "-1" value is unlimited EVE resource. Only Editor and User roles can be set for EVE resource limitation, Quota.

**Example:** editor user is allowed to run/create labs for x4 CPU and 8Gb RAM.

Quotas CPU RAM 4 8 (GB) × Success 0 Error 1 v vIOS1: User's CPU quota violation × Cancel Step 12: Press ADD Add

In case of violation these settings, user will receive alert message in the notification area:

7.3.1.2 Edit EVE User

Step 1: Open the User management submenu. Management -> User management and choose which user you want to edit.

Jser managemer	er management here you can manage DYE-NG users										
Database of users							+Add user More Info +

#### 7.3.1.5 User role sticky lab

**Sticky Lab.** Applies for User role only. Set the specific Lab for the user, "sticky lab". After login in the WEB, EVE User will direct only to this lab. He cannot close the lab to get in main Lab management page. User can Start/Stop/Wipe lab, as well save his lab work on the lab devices.

Pre-requisites for this feature: The user must be created before. It must exist in EVE database. Only then use Edit user and set desired Sticky lab. For Lab selection from the list, the Lab must be upload in the Shared folder by admin first. If Lab Menu is selected to "None", User can close the Lab and open another shared Lab for him.

The value "None" is set as default.

## 7.3.2 EVE Node management

essional	者 Main	<del>بر</del> M	lanagement 🗸	🗐 Sj	ystem 👻	i Informa	tion 👻	<li>Li</li>
Current po:	sition / roo		User managem Node managen					
		A	Lab manageme	nt		Add folder		
ê 🛓	± 🗉	C						

The Management dropdown has a submenu called "Node Management." The Node management menu displays all currently running nodes within EVE. Within this menu, an Admin account can manage or even console to any user's nodes.

- NOTE: Editor and User accounts are able to see and open console sessions to their own running nodes only
- NOTE: Admin accounts are able to see and open console session to all users running nodes

le management here you can	manage EVE-NG running nodes				$\Psi > FM$	nagement > @Nodes mar

- Cluster Network. EVE-NG cluster members VPN network, used for intercommunication between EVE-NG cluster members. Customizable, please, change the first three octets to your preferred network. Format of network A.B.C.0/24. The mask /24 is hardcoded. (Value example: 192.168.90.0). The master EVE server IP of wg0 interface will be assigned: A.B.C.254. Rest Cluster members IPs of wg0 interface will be assigned accordingly EVE satellite ID, First EVE satellite ID1 IP will be A.B.C.1. NOTE, after changes of this network, the whole EVE cluster members reboot is required!
- **Docker Network**. EVE-NG Dockers network. Used for dockers and docker consoles. Customizable, please, change the first two octets to your preferred network. Format of network A.B.0.0/24. **The mask /16 is hardcoded**. (Value example: 172.18.0.0). The master EVE server IP of docker0 interface will be assigned: A.B.C.1 NOTE, after changes of this network, the whole EVE cluster members reboot is required!
- NAT Network. EVE-NG NAT Network, "Natting" internal EVE NAT network to the management pnet0/cloud0 EVE management interface IP. Used to have Internet in the labs with different network. DHCP service is enabled on this interface automatically. Customizable, please, change the first three octets to your preferred network. Format of network A.B.C.0/24. The mask /24 is hardcoded. (Value example: 192.168.100.0). The gateway and DNS IP of the NAT network interface will be assigned: A.B.C.254. NOTE, after changes of this network, the master EVE server reboot is required!
- External Radius Server, IP port and shared secret key
- Active Directory Authentication support
  - ✓ IP address of AD and port 389 or 3268 (TLS)
  - ✓ For TLS Active directory communication option, select TLS
  - ✓ DN: Example if domain is eve.lab, then DN syntax is: dc=eve,dc=lab
  - ✓ EVE-NG Active Directory Group: Example: EVE Users. EVE will search Your Group name in whole domain folder tree.

• **CPU/Memory Settings** dedicated cores for EVE services. Suitable for EVE machine with more than 8 vCPU cores. Select the dedicated amount of CPU cores for system use.

Dedicated CPU for Services (Reboot required) 2 💲

 CPU NUMA Balancing enables or disables CPU NUMA balancing settings. Suitable for EVE machines with up to x6 vCPU cores. If your EVE has 8 or more vCPU cores disabling this option will force to use of CPUs if full scale and you will achieve better and more nodes to start in your labs.

Numa Balancing 🗌

## 7.4.2 Cluster Management

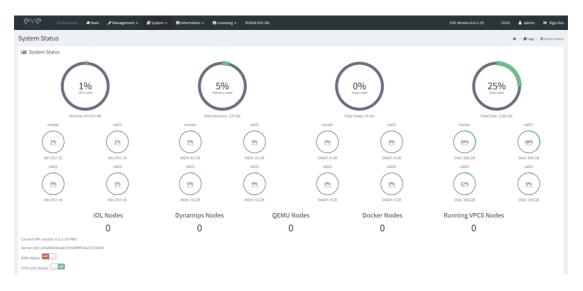

The Cluster Management page, under the System Dropdown, will show Cluster Management options, and cluster members resources utilization. Please refer to Chapter EVE Cluster System 14

## 7.4.3 System status

The System Status page, under the System Dropdown, will show EVE server resource utilization, the number of running nodes per template, current running versions of EVE and the current status of the UKSM and CPU Limit options.

KSM – "KSM (kernel same-page merging) is a Linux kernel feature that allows the KVM hypervisor to share identical memory pages among different process or virtual machines on the same server." It can be disabled globally for EVE on this page. It is recommended to keep KSM **enabled**.

Template		
Cisco vIOS		*
Number of nodes to add	Image	
1	vios-advente	erprisek9-m-15.6.2T 🔹
Name/prefix		
vIOS		
lcon		
睯 Router.png		*
UUID		
CPU Limit 🛛 🗸		
СРИ	RAM (MB)	Ethernets
1	1024	4

CPU Limit – CPU limit is used to limit CPU overloads during the nodes run time. It acts like a smart CPU usage option. If a running node reaches 80% CPU utilization, the CPU Limit feature throttles CPU use for this node to 50% until process usage drops under 30% for a period of 1 minute.

It is recommended to keep the Global CPU Limit option enabled.

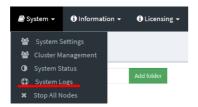

CPU Limit can be turned for individual nodes in a lab. EVE node templates are set, by default, with the recommended CPU limit settings. An Unchecked CPU Limit option means that this node will boot without CPU

limit.

Reference:

https://searchservervirtualization.techtarget.com/definition/KSM-kernel-samepage-merging

## 7.4.4 System logs

The System logs page, under the System Dropdown, will display EVE server log information

In the menu you can select a specific log file for inspection.

ystem logs					# Blogs	O System lo

* - Required Fig	dele					

This page allows you to fill out important information about the lab. The red numbers in the picture correlate with the numbers listed below

- 1. Lab name.
- 2. Version: Version numbers allow a lab author to assign a value to a unique state of a lab. Increase the number to correspond to new developments in the lab. If left unfilled, EVE will assign a value of 1 automatically.
- 3. Author: You can add a lab author name in this field

- 4. EVE Cluster Satellite choice. By default, EVE will assign a value of "any" automatically. For cluster hierarchy please follow: Chapter 14.9
- 5. Lab sharing Feature, please follow Chapter 8.11
- 6. Config Script Timeout: It is the value in seconds used for the "Configuration Export" and "Boot from exported configs" operations. Refer to section 10.3 for more information.
- 7. Lab Countdown Timer: It is the value in seconds to provide a time limit (countdown timer) for completing a lab. Refer to section 10.4 for more information. Default Lab
- 8. Links width, you can set default thickness of links for whole lab.
- 9. Topology background grid on/off.
- 10. Description: In the Description field you can write a short description of the lab.
- 11. Tasks: In the Tasks field you can write the task for your lab.

The Lab details window can be opened from the Topology Canvas page sidebar during labbing, to read the Tasks for the lab.

Here are tasks for your lab. Task 1, Please configure Routers with IP addressing Task 2. Configure IGP, EIGRP routing on all nodes Task 3. Configure windows Host to receive DHCP IP address	

## EVE WEB Topology page

Once you open a lab, the topology page for that lab will open.

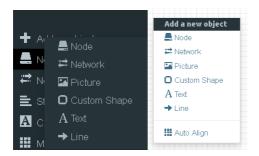

## 7.9 Side bar functions

Move your mouse pointer over to the left on top of the minimized sidebar to expand the interactive sidebar as shown in below screenshot

## 7.9.1 Add an object

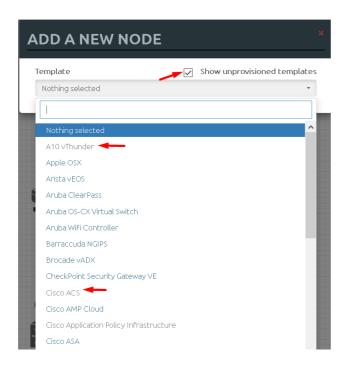

The "Add an object" menu can be accessed in two different ways, from the sidebar and by rightclicking on the Topology Page

## 7.9.1.1 Node object

The Node object opens the "Add a new node" window. Only nodes that appear blue in the dropdown menu can be added. A grey image name signifies that you have not yet properly uploaded an image to the proper folder. A blue image name means that at least one image exists in the proper folder for this template. If the "Show unprovisioned templates" is checked, EVE will display unloaded image templates. To hide it, uncheck "Show unprovisioned templates" checkbox or follow section 7.4.1

## 7.9.1.2 Network object

The Network object opens the "Add a new network" window. This function is used to add any kind of network (Cloud, Bridge or NAT). For details on these, please refer to section 9

ADD A NEW	NETWORK	×
Number of networks to add	1	
Name/Prefix	Net	
Туре	bridge 👻	
Left	0	
Тор	0	
	Save Cancel	

#### 7.9.1.3 Picture object

The picture object opens the "Add Picture" window and allows you to upload custom topologies in jpg or png format. After uploading, you can edit these pictures and map selected areas to nodes from the topology to use your own designs as a lab topology from which you can directly connect to the nodes. For details, refer to section 10.2

ADD PICTUR	RE	×
Name	MyTopology	
Picture	Browse anycon_lab.PNG	
	Add Cancel	

## 7.9.1.4 Custom shape object

The Custom shape object allows you to add shape elements onto the topology; these currently include squares, round squares and circles. For details, refer to section 10.1

ADD CUSTOM SHA	PE	×
Туре	square ~	
Name	Name	
Border-type	solid ~	
Border-width	5	
Border-color		
Background- color		
Save Cancel		

#### 7.9.1.5 Text object

The Text object allows you to add MS Office elements onto the topology. For details, refer to section 10.1.3

Add a new object	
📥 Node	
## Network	
Picture	
Custom Shape	B I U S X₂ X²   ✔ I <sub>x</sub>   ≔ ≔   ⊕ ⊕   ♀ ♡   ≡ ≡ ≡   ⋅ ¶ № ∰   ∞ ∞ ∞   ■   ∞ ⊞ ≣ Ω ③ ⊡
A Text	Styles • Format • Font • Size • 🛕 🖏
→ Line	New Text
🚻 Auto Align	

#### 7.9.1.6 Line object

The Line object allows you to add line elements onto the topology; these currently include single arrow, double arrows and simple lines. For details, refer to section 10.1

ADD LINE		
Width	2	٢
Arrow Style	→ single arrow	•
Paint Style	Solid	•
Line Style	Straight	•
Line Color		
Line Label		
Save Cancel		

# 7.9.2 Nodes

📕 Nodes

The Nodes object in the sidebar opens the "Configured Nodes" window.

Con	figure	d node	S																• •
\ssigr	signed resources to the Lab (Total/ Running) vCPU 9/8 - RAM 20/19 GB									EVE-NG System total ava	ilable resources: v	CPU <b>112</b> - RAM	504

In this window, you can make changes for nodes that are on the lab topology. More options can be found in the detailed node specific menu, for details refer to section 8.1.2.

▲ NOTE: Running nodes are highlighted in Blue, their settings cannot be changed. You can only change settings of nodes that are not currently running.

You can change the following values:

- Node Name
- Boot image
- Number of CPUs for the node
- Live CPU usage
- Enable or disable CPU Limit (Refer to section 7.4.3)
- IDLE PC for Dynamips node
- NVRAM in Kbyte
- RAM in Mbyte
- Live RAM usage
- Ethernet quantity. **NOTE:** The Node must be disconnected from any other nodes to make this change. You cannot change the interface quantity if the node is connected to any other node.
- Serial interface quantity, IOL nodes only. You cannot change Serial interface quantity if the node is connected to any other node.
- Type of Console
- Node Icon that appears on the Topology
- Startup configuration to boot from

#### Actions Buttons (Stopped node):

- Console to the node
- Stop node
- Wipe node
- Export the nodes config
- Edit node
- Delete Node

#### 7.9.3 Networks

Hetworks

The Networks object in the sidebar will open the "Configured Networks" window.

The "Configured Networks" window will only show networks that were specifically added to the topology; it will not show node interconnections. The example below is showing information for networks on the Topology. For Cloud networks and how to connect EVE labs to a network external to EVE, please refer to section 9

CONF	IGURED NETWORKS			• x
ID	NAME	түре	ATTACHED NODES	ACTIONS
1	TAN	nat0	1	C 1
2	Mgmt	pnet0	1	0° fi

#### ACTIONS

c î

- Edit Network
- Delete Network

#### 7.9.4 Startup-configs

🖹 Startup-configs

The Startup-configs object in the sidebar opens the "Startup-configs" window.

This window will show you startup-config for each node (for PRO it shows the startup configs of the current config set) and if the node is set to boot from it (ON) or not (OFF).

The "Startup-configs" window in the EVE Professional version contains additional features, please refer to section 10.3.

STARTUP-C	ONFIGS		* ×

#### 7.9.5 Logical Maps

Pictures NOTE: The Logical Maps object will only appear in the sidebar after you have uploaded a custom topology picture to the lab EVE lab (Please refer to section 7.9.1.3). The Pictures object in the sidebar opens the "Picture Management" window.

For details on the Picture / custom topology feature, refer to section 10.2

### 7.9.6 Configured Objects

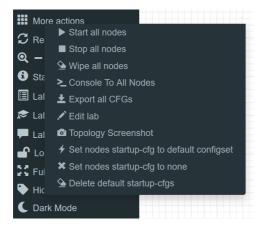

A Configured objects The "Configured Objects" window will display a list of all objects that are added onto the topology. For details on different objects, refer to section 10.1

NOTE: You will not see any objects in this window if none have been added to the lab yet.

CONF		DBJECTS		
ID	NAME	TYPE	TEXT	ACTIONS
1	bit 1	text	Tepology xtx	8
2	square2	square		ii.

### 7.9.7 More actions

The More actions menu in the sidebar has a submenu with the following functions.

#### 7.9.7.1 Start all nodes

Start all nodes

The "Start all nodes" action will start all nodes on your topology, taking the (configurable) startup delay of each node into consideration.

IMPORTANT. Starting many nodes at once can seriously spike your CPU utilization. Please make sure that you are not using the "Start all nodes" option for heavy labs or that you have configured a proper delay between the nodes. For heavy nodes and large quantities, it is recommended to start them in smaller groups, wait for them to finish booting and then start another small group of nodes.

#### 7.9.7.2 Stop all nodes

Stopping all nodes will power off all nodes on your topology.

NOTE: It is recommended to save your (running) configurations on the nodes in your lab before you stop the lab if you want to continue where you left off the next time. Stopping the nodes will leave the images in a temporary folder and will take up space on your drive until they have been wiped.

#### 7.9.7.3 Wipe all nodes

∕⊆ Wipe all nodes

The "Wipe all nodes" action will wipe the NVRAM or currently saved image of all your nodes in the current lab.

Example: You have saved the nodes configuration by saving the running configuration to the startup configuration. The Wipe command will delete the saved NVRAM startup configuration and on the next boot it will boot from factory defaults.

The same applies to images without configurations, e.g. a linux node. If you make modifications to the system and afterwards wipe this node, the next time it will boot from the original base image again as the modified image was deleted.

The "Wipe node" action is commonly used with initial startup configuration modifications. The Wipe node action does not delete configured startup configurations or sets. Please refer to section 10.3

#### 7.9.7.4 Console to All Nodes

Console To All Nodes "Console to all nodes" will open a console to all of your running nodes in the current lab. This includes all different kinds of configured console types for lab nodes like VNC, Telnet and RDP.

#### 7.9.7.5 Export all CFGs

🛓 Export all CFGs

The "Export all configurations" action will export current configs to the EVE startup-configs.

Export configurations are supported for:

Cisco Dynamips all nodes	Juniper VRR
Cisco IOL (IOS on Linux)	Juniper VMX
Cisco ASA	Juniper vMX-NG
Cisco ASAv	Juniper vQFX
Cisco CSR1000v	Juniper vSRX
Cisco Catalyst 9000v	Juniper vSRX-NG
Cisco Catalyst 8000v	Mikrotik
Cisco Nexus 9K	PFsense FW
Cisco Nexus Titanium	Timos Alcatel
Cisco vIOS L3	vEOS Arista
Cisco vIOS L2	Aruba CX Switch
Cisco Viptela vEdge, vSmart, vBond, till	
version 18.4 only, version 19.x and later is	
not supported due implemented password	
setup feature on the first boot.	
Cisco XRv	
Cisco XRv9K	

For a full explanation of exporting configurations, please refer to section 10.3

#### 7.9.7.6 Edit lab

🖍 Edit lab

Opens the Edit lab window. Refer to section: 7.8.4

Edit lab						×
Path'	/A1 Test Lab	s/002-TEST-0001.u	nl	Description		
Name*	002-TEST-00

#### 7.9.7.8 Set node's startup-cfg to default configset

\* Set nodes startup-cfg to default configset will boot from factory default instead. This is commonly used with the wipe nodes function so the node will boot from the configured startup-config on next boot and not from the startupconfig in its NVRAM in case the node was started before already.

Please refer to section 10.3

#### 7.9.7.9 Set node's startup-cfg to none

Setting all lab nodes to boot from factory default. Used commonly with the wipe nodes function. The example below shows the steps to set a lab to boot from factory default.

Step 1: Wipe all nodes Step 2: Set all nodes to startup-cfg none

Please refer to section 10.3

#### 7.9.7.10 Delete default startup-cfgs

🕒 Delete default startup-cfgs

▲ WARNING: this action will delete all configurations saved to your saved default config set. Please make sure that is what you want to do before you execute this.

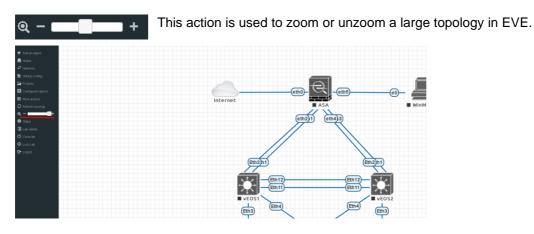

#### 7.9.8 Refresh Topology

 ${\cal G}$  Refresh topology

Sometimes it is necessary to refresh the topology if many objects are added on the topology.

#### 7.9.9 Lab page zoom/unzoom

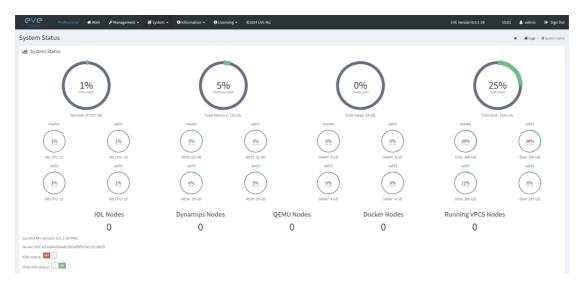

Opens the EVE Status window.

Especially useful while working with labs to monitor your EVE's resource utilization. It shows EVEs CPU, RAM and disk utilization in real time. You can also see the number of running nodes per node type. For details on KSM and CPU Limit, please refer to section 7.4.3

#### 7.9.11 Lab details

🔳 Lab details

Lab details display information about a lab, its UUID, description and lab tasks. To edit the lab description and lab tasks, please refer to section 7.8.4 and 7.9.7.6

# 7.9.12 Lab Tasks

Copens a Lab Task feature. The EVE LabTasks is a feature that allows users (including admins and editors) to to create task or workbook for the Labs. Detailed how to create lab workbooks please refer Secton 10.5

### 7.9.13 Lab Chat

Lab Chat

Opens a Lab chat session between users on the same EVE server. To activate the chat, click "Lab Chat"

on the sidebar. To close and exit from the chat, click "Lab Chat" on the sidebar again. The EVE Lab chat is a feature that allows users (including admins/teachers) to communicate with each other during lab sessions.

LAB CHATROOM	
[10:42:52] uldis joined	
[10:43:19] admin joined	
[10:43:24] admin: hello uldis	
[10:43:34] uldis: hello admin	

#### 7.9.14 Lock Lab with password

"Lock Lab" disables some of the functions on the lab topology. If the lab is locked, you cannot move any node or object nor edit any node settings. Basically, the whole lab will be in readonly mode except for the lab settings itself, which you can still edit as Administrator or Editor from the main menu. The Lock Lab function is also used in conjunction with the countdown timer function, for details on this please refer to section **10**.4

Lock Lab	LOCK LAB X
Lab is unlocked and all operations are working	Password Confirm password Look Cancel
	Enter and confirm your lab lock password

To unlock a Lab, simply press on the red "Unlock Lab" button with an Administrator or Editor account.

🔒 Unlock Lab		UNLOCK LAB *
Lab is locked and all operations restricted	are	Enter password to unlock lab Password UnLock Cancel
		Enter lab unlock password to unlock lab.

Warning: Please remember your Lab lock password. In case of a lost password, you will not be able to recover it. Unlocking a lab / removal of password can be done by EVE-NG support only.

### 7.9.16 Fullscreen

"Fullscreen" Fullscreen function is stretching your lab to the full monitor screen. To get back to normal web screen hit "ESC" or press

#### 7.9.17 Hide interface labels

Hide labels	Show labels	
Hide interface labels for lab nodes	Show interface labels for lab nodes	

# 7.9.18 Dark mode or Light mode

C Dark Mode	🏟 Light Mode	
Sets your lab background to the dark mode	Sets your lab background to light mode	

### 7.9.19 Close lab

Close lab Close lab topology. The lab can be closed while the nodes in the lab are still running as well. It will appear as running lab under the Running folder. Please refer to section 7.2.1.1

#### 7.9.20 Logout

🕒 Logout

Log out from the EVE WEB GUI session.

# 7.10 EVE Lab topology menus

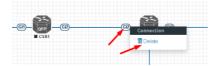

Right-clicking within the EVE topology can open new menus with various functions and options for managing nodes.

#### 7.10.1 Lab topology menu

Right-clicking on the (free/unused) canvas of the EVE topology opens a new menu. (Add-) Node, Network, Picture, Custom Shape and Text are the same functions referred to in section 7.9.1.

**Auto Align.** This function will help align objects on the topology. The lab creator does not need to worry about small displacements of objects. AutoAlign will align all objects to a virtual grid with a single click and can make neatly arranged labs look even neater.

# 7.10.2 Connection menu

Right-clicking on the connection between nodes allows you to delete this connection.

# 7.10.3 Network Adding

Add a new object
Ande Node
Retwork

When you have chosen Add a Network, the ADD A NETWORK window will open where you can change the placement, **network type** or name/prefix.

NOTE: You can add multiple networks (clouds) on your EVE topology, which will act as same cloud but in different locations on your EVE. Literally, like, the ethernet socket in the wall.

ADD A NE	W NETWORK	
Number of networks to add	1	
Name/Prefix	MyNetwork

	Cloud1	
	Cloud2	
	Cloud3	

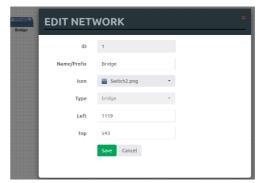

### 7.10.4 Bridge or Internal network menu

в	Bridge
	🖸 Edit
	🗲 Manage
	Delete

Right-clicking on a Bridge or Internal network allows you to Edit, Manage or Delete it.

If you have chosen Edit, the Network edit window will open a window where you can change the placement, name/prefix or icon.

For details on how to operate EVE Cloud networks and external connections, please refer to section 9

BRIDGE						×
ID	1					
Smart B	ridge (Exp	erimental)				
Enable 80	2.1ad (Exp	erimental)				
NODE ID NO	DE NAME	INTERFACE	D INTERFA	CE NAME	VLAN ID	
	Save	Cancel				

If you have chosen Manage, the Network Manage window will open a window where you can change Port assignments or protocol used for the bridge network.

For details on how to operate EVE Cloud networks and external connections, please refer to section 9

# 7.10.5 Cloud and Private network menu

When you have chosen Add a Network, the ADD A NETWORK window will open where you can change the placement, **network type** or name/prefix.

NOTE: You can add multiple networks (clouds) on your EVE topology, which will act as same cloud but in different locations on your EVE. Literally, like, the ethernet socket in the wall.

For details on how to operate EVE Cloud networks and external connections, please refer to section 9

Right-clicking on a Cloud or Private network allows you to edit or delete it.

### 7.10.6 Stopped node menu

Right-clicking on a stopped node also opens a menu:

Start node: This will start the selected node in this lab

**Wipe node:** Wiping a node will erase the NVRAM (running config) or the temporary image snapshot depending on the type of node. This option is used to clean up a node in order to boot it from factory defaults or a custom set of configurations.

**Edit node:** Opens the Edit node window (picture on the right). For details, please refer to section 8.1.2

**Delete node**. Deletes the node from the lab. It is recommended to disconnect (delete connections to it) the node before you delete it.

# 7.10.7 Running node menu

Right-clicking on a running node also opens a menu:

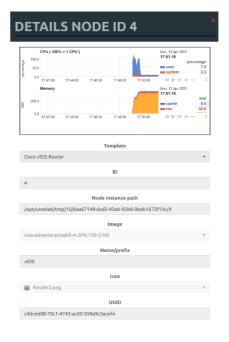

**Stop.** Blue arrow: clicking on Stop will stop the node depending on the method the node supports (power off / shutdown are autoselected based on the template)

**Stop menu.** Red arrows: There are more options to stop a node, clicking on the chevron on the left side of "Stop" opens a submenu.

- **Shutdown**: Perform an orderly shutdown of the node if that node supports it (shutdown signal is sent down to the node)
- Power off: Kills the running nodes process within EVE (hard poweroff).
- **Hibernate.** Save Node state (Disk and Memory are saved in an internal snapshot). Used for fast boot of a node. The hibernation process can take some time. Once the hibernation process is completed, the node will turn grey (shutdown state).

**Details**: Details of running node template and graphical resource usage.

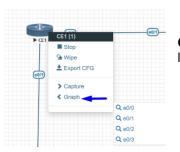

**Wipe node**: Wiping a node will erase the NVRAM (running config) or the temporary image snapshot depending on the type of node. This option is used to clean up a node in order to boot it from factory defaults or a custom set of configurations.

**Export CFG:** This function is used to export the saved running configuration to the EVE startup configuration sets. Reference section 10.3

**Capture**. Integrated live Wireshark capture. Select the interface which you wish to capture. Reference section **11** 

#### 7.10.8 Selected nodes menu and features

It is possible to select many objects or nodes at once in EVE. Using your mouse, you can select an area which will cover your nodes and/or you can click on nodes while holding the CTRL key on your keyboard.

60	60	
G11G12	Gi2Gi1	6
CSR1	► CSR2	Mgmt
	Gi3	

A right-click on any of the selected nodes opens a group menu:

311-	QFP	Gi2		Gi2	QFF	Group of CSR1, CSR2
	CSR1				► C5 Gi3	Start Selected Shutdown Selected Wipe Selected
			/	/	vswit	<ul> <li>≿ Console To Selected Nodes</li> <li>★ Export all CFGs</li> <li>★ Set nodes startup-cfg to default configset</li> </ul>
			Git OFP CSR3			Set nodes startup-cfg to none  Horizontal Align  Vertical Align  Circular Align
						Delete nodes startup-ofg     Delete Selected

Start Selected: This will start the selected nodes in this lab.

**Stop Selected:** This will stop the selected nodes in this lab

**Wipe Selected**: The Wipe Selected nodes action will wipe the NVRAM or currently saved image of the selected nodes in the current lab.

Example: You have saved the nodes configuration by saving the running configuration to the startup configuration. The Wipe command will delete the saved NVRAM startup configuration and on the next boot it will boot from factory defaults.

The same applies to images without configurations, e.g. a linux node. If you make modifications to the system and afterwards wipe this node, the next time it will boot from the original base image again as the modified image was deleted.

The Wipe node action is commonly used with initial startup configuration modifications. The Wipe node action does not delete configured startup configurations or sets. Please refer to section 10.3

**Console To Selected Nodes:** Console To Selected Nodes will open a console to all selected running nodes in the current lab. This includes all different kinds of configured console types for lab nodes like VNC, Telnet and RDP

**Export all CFGs:** The Export all configurations action will export current configs of selected nodes to the EVE startup-configs.

For a full explanation of exporting configurations, please refer to section 10.3

**Set nodes startup-cfg to default configset:** Sets nodes to Default startup config, used commonly with the wipe nodes function. NOTE: If you have nothing saved in the default config set for any node, that node will boot from factory default instead. This is commonly used with the wipe nodes function so the node will boot from the configured startup-config on next boot and not from the startup-config in its NVRAM in case the node was started before already.

Please refer to section 10.3

**Set nodes startup-cfg to none.** Setting selected lab nodes to boot from factory default. Used commonly with the wipe nodes function. The example below shows the steps to set selected nodes to boot from factory default.

Step 1: Wipe selected nodes Step 2: Set nodes startup-cfg to none

Please refer to section 10.3

Horizontal Align. Aligns the selected nodes in one horizontal line.

Step 1: Select the nodes you wish to align.

Step 2: Right click on one of the selected nodes and choose Horizontal align, this will align all nodes to the selected node.

#### Picture before:

Picture after:

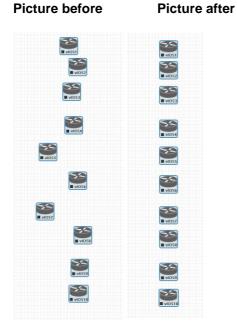

Vertical Align: Aligns the nodes in one vertical line.

Step 1: Select the nodes you wish to align.

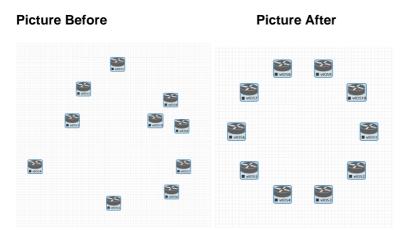

Step 2: Right click on one of the selected nodes and choose Vertical align, this will align all nodes to the selected node.

Circular Align: Aligns the nodes in a circle.

Step 1: Select the nodes you wish to align.

Step 2: Right click on one of the selected nodes and choose Circular Align, this will align all nodes in a circle, the midpoint of the circle will be at the coordinates the selected node was at before.

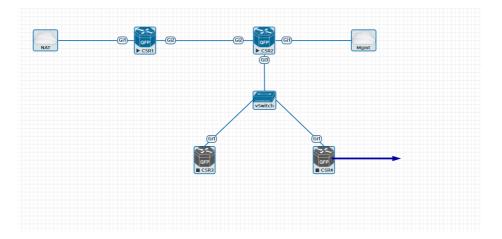

#### Delete nodes startup-config.

WARNING, this action will delete the configurations of the selected nodes that are saved to your Default config set. Please make sure that is what you want to do before you execute this.

Delete selected: This will delete the selected nodes from your current lab.

Selected nodes can be moved as a group across the topology.

Example: You can select nodes and objects to better position them on the Topology.

# 7.11 EVE Lab node states and symbols

#### 7.11.1 Stopped (non-running) nodes

Grey colour and a square symbol below a node means that the node is stopped and not running. Once you will start it, the node will change to one of the running states below.

A grey node with an exclamation mark inside a triangle below the node means that there was a problem during the boot process, this could be a corrupted boot image, insufficient resources or problems with the initial configuration. A node in this state cannot be started again.

**Workaround**: Right-click on the node and wipe it, the symbol will then change to a grey colour with a square symbol below it. Then edit the node and make sure you have configured sufficient resources and the correct settings for this node, if it has startup-configs you can check them as well. Afterwards start the node again.

#### 7.11.2 Running nodes

The blue color and black Play triangle symbol means that the node is started and running, the node is in a working/functional state.

A running node with a clock symbol below the node means that the node is waiting to finish loading from the set exported/startup configuration. Once the configuration has been successfully applied, the node symbol will change to a Play triangle symbol. If the node has finished booting but the clock symbol does not change to

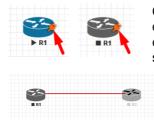

the Play triangle symbol, the problem could be in the uploaded startup configuration. For how to use exported configurations and boot nodes from them, please refer to section 10.1

A running node with a turning red gear symbol means that the node is either in the process of hibernating the node or it has sent the shutdown signal to the node and is waiting for it to turn off. Once this process has successfully finished, the symbol will turn into a grey node with a black square symbol below it (stopped state).

A NOTE: If the node does not support a system shutdown or does not recognize the shutdown signal (example: Cisco router), after clicking on Shutdown, the node can stay with a turning red gear symbol below it indefinitely. Workaround: Use Stop or Stop/PowerOff to stop the node.

Example nodes where Stop/Shutdown is supported: Microsoft Windows and most Linux nodes as well as a lot of appliances based on linux.

#### 7.11.3 Node connector symbol

Connector symbol: If you move your mouse pointer on top of a running or stopped node, an orange connector symbol appears. It is used to connect nodes on the topology in a drag and drop style. Drag the symbol from one node and release the mouse pointer on the second node. A new window will appear where you can select the interfaces the link should connect to.

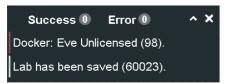

#### 7.12 Other

#### **Notifications area** 7.12.1

~ X Success 1 Error 1

The Notification area in the top right is displaying informational or error messages.

Unwrapped notifications:

The Notification messages bar appears automatically for any EVE-PRO activity made on Topology.

Success 4	Success message counter. For review, click on green ball to unwrap notifications. To wrap notifications, click to the ball again or click at any point of topology
Error 1	Error message counter. For review, click on red ball to unwrap notifications. To wrap notifications, click to the ball again or click at any point of topology

~	Unwrap or wrap notifications bar.
×	Close notifications bar. Note: Notifications bar appears automatically on any EVE topology activity.

# 8 Working with EVE labs

IMPORTANT NOTE: You must prepare and upload at least a couple of images to start building your labs. Refer to section 17

# 8.1 Creating a lab

Step 1: Click Add new lab. For more information on creating new labs, please refer to section 7.2.2.1

Step 2:

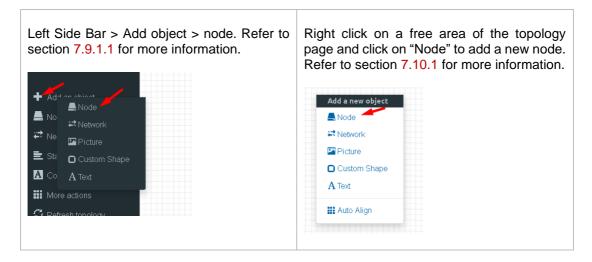

Fill out the lab information. Name and Version are required fields. Next hit Save. Refer to section 7.8.4 for more information about the different fields in the Edit lab window.

# 8.1.1 Adding nodes to the lab

The new Topology page will open. There are two different ways to add nodes to the topology canvas:

Step 1: Object/Add Node

Step 2: The Add new node window will appear. You can scroll down to choose which node you wish to add to the lab topology, or you can type the node name to filter through the node list.

NOTE: It will only be possible to select and add nodes that have images preloaded in EVE. These nodes will be displayed in a blue font. To prepare images for EVE, refer to section 17

8.1.1.1 Node values Table

Number		Description
1.	ADD A NEW NODE	Template menu. Choose which node template to add to the topology

2.	Number of nodes to add Chose the number of nodes of this type you want to add to the topology
3.	Image csr1000v-universalk9.03.17.04.S.156-1.S4 csr1000v-universalk9.03.17.04.S.156-1.S4 Choose your preferred version from preloaded images list (if you have more than one image loaded for a single template).
4.	Name/prefix       Type your preferred node name. If you are adding more than one, EVE will automatically append numbers to the nodes name.         Example. We are adding 5 CSR nodes with the name R. On the topology they will appear as R1, R2, R3, R4, R5. Later using the Nodes window, you can edit the node names per your needs. Refer to section 7.9.2 or edit the node individually, refer to section 8.1.2.
5.	<ul> <li>CSMM000.png</li> <li>Arbs.crt.png</li> <li>Arbs.crt.png</li> <li>CSMM000.png</li> <li>Node icons can be changed from the default per your preference, simply choose the preferred icon from the dropdown list. Node icons can be changed later per your needs. Refer to section 7.9.2</li> </ul>
6.	The UUID number is assigned automatically after a node is created. You may also set it manually in case you are using a license that is tied to a particular UUID.
7.	CPU Limit CPU Limit per node. This option is already set (checked/unchecked) per EVE recommendations. Refer to section 7.4.3
8.	CPU       Each node template has a pre-set CPU value that aligns with vendor requirements. This value can be changed per your needs.
9.	RAM (MB)Each node template has a pre-set RAM value that aligns with vendor requirements. This value is displayed in MB and may be changed per your needs.
10.	Ethernets       4       The number of ethernets interfaces.

	▲ NOTE for IOL nodes:
	Ethernet interfaces for IOL nodes are placed into groups of 4. A value of 1 for Ethernet means your node will have 4 interfaces.
	The serial interface option is available for IOL nodes only and follows the same grouping structure as ethernet interfaces. A value of 1 for Serial means your node will have 4 serial interfaces.Ethernet portgroups (4 int each)Serial portgroups (4 int each)interfaces.
11.	Custom MAC address for Qemu nodes only. You can define your own MAC address for first interface:          First Eth MAC Address         aa:bb:cc:00:de:ad
12.	QEMU VersionEVE will pre-set the best recommended QEMU version for each node template. This value can be changed per your needs.
13.	QEMU Arch
14.	QEMU Nic         tpl(vmxnet3)         vrtio-net-pci r e1000 e1000-82545em vmxnet3    Type of Qemu NIC is pre-set per image vendor recommendations. This value can be changed per your needs.
15.	QEMU custom options -machine type=pc-1.0,accel=kvm -cpu Nehalem -serial mon:stdio -nographic-r recommendations. This value can be changed per your needs
16.	Startup configuration       Startup configuration: Value can be changed to set your node to boot from saved configurations. Refer to section 10.3 for more details.
17.	The Delay value is set in seconds and can be used to delay a node from booting after it is started. Example: if the value is set to 30, the node will wait 30 seconds before processing its boot sequense. This feature is useful in conjunction with the "Start all nodes" function if your lab requires certain nodes to start up before others or to avoid a mass-start of very heavy nodes.

	<b>Console</b> telnet	<ul> <li>Console types for each</li> <li>template are pre-set with recommended settings.</li> </ul>
18.	<ul> <li>The setting can be changes per your needs.</li> <li><b>NOTE:</b> The Docker template contains a therefore, please refer to section 14.1.3 types for each docker image. Windows VNC but RDP needs to be enabled in W</li> </ul>	a wide variety of images, for recommended console nodes can use either RDP or
19.	First Eth MAC Address manually set the MAC address for the first ether the use of licenses that are tied to a particular M MAC Address format must be like: 00:50:0a:00:	IAC address.

#### 8.1.2 Edit node

EVE provides two ways to edit nodes after being added to the topology canvas.

- A NOTE: A node must be wiped each time an image or startup configuration has been changed.
- 8.1.2.1 Edit nodes globally

From the Topology page. Click "Nodes" from the left sidebar to bring up the nodes list. Refer to section 7.9.2 for more details.

8.1.2.2 Edit node individually.

Right click on the node and click Edit

The "Edit node" window will appear. It is very similar to the window that is displayed when you add a new node. To change values for the node, refer to the nodes value table in section 8.1.1.1.

#### **EDIT NODE** Template Cisco vIOS ID 1 Image vios-adventerprisek9-m-15.6.2T Name/prefix VIOS lcon 睯 Router.png UUID b5fa3320-98ed-4ea4-ad21-627d427b8a6a CPU Limit CPU RAM (MB) Ethernets 4 1 1024 QEMU Version QEMU Arch QEMU Nic tpl(default 2.4.0) 🔹 tpl(i386) tpl(e1000) QEMU custom options -machine type=pc-1.0,accel=kvm -serial montstdio -nographic -nodefconfig -nodef Startup configuration None Delay (s) 0 Console telnet Left Тор 839 218 Cancel

#### 8.1.3 Wipe Node

54		
I VI	vIOS (1)	
	Start	
	실 Wipe	
	🕑 Edit	
	î Delete	

The "Wipe node" function will clear the NVRAM of the node. Each time a node setting is changed (CPU, RAM, boot image or startup configuration) a wipe must be issued on that node. For more information refer to section 10.3

#### 8.1.4 Interconnecting nodes

To connect nodes on the lab, use the drag and drop style method

Connector symbol: Moving the mouse over a node will make an orange male plug appear. The male plug is used to connect nodes on the topology, drag and drop style. Release the mouse pointer on the second node.

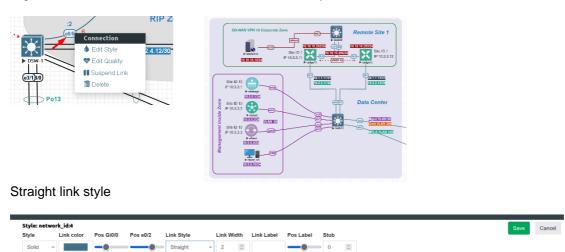

66		<b>5</b> 3	
R1	R2	▶ vios	NAT

The connection window will appear. Choose the interface you want to use to interconnect the nodes. Click Save when finished.

# 8.1.5 Edit connection link style

Right click on the connection link and choose Edit Style

Bezier link style

ancel

Style: network_id:4	
Style Link color Pos Gi0/0 Pos e0/2 Link Style Link Width Link Label Pos Label Curviness	irviness
Solid v Bezier v 2 0 150 3	150 0

Flowchart link style

Style: net	work_id:4												
Style	Link color	Pos Gi0/0	Pos e0/2	Link Style		Link Widt	th	Link Label	Pos Label	Rou	nd		Midpoint
Solid	~	-0		Flowchart	×	2	$\hat{\boldsymbol{\boldsymbol{\cdot}}}$			25		$\hat{\cdot}$	

**Style**: Allows you to choose solid or dashed style for link. This can be edited later in the "Shape Edit" menu.

**Link colour**: Allows you to choose a colour for the link. This can be edited later in the "Shape Edit" menu.

Pos "interface" label: Allows move and position interface label

**Link Style**: Allows you to choose a style Straight, Bezier, Flowchart or StateMachine for the link. This can be edited later in the "Shape Edit" menu.

Link Width: Allows you to choose a thickness for the link. Default thickness of liniks is 2.

Link label: Allows you to add a label on the link. This can be edited later in the "Shape Edit" menu.

Pos Label: Allows move and position Link label, position it on the link

Curviness: Link curviness feature for Bezier style link

Midpoint: Link mid point change, Flowchart style only

Round: Link round angles, Flowchart style only

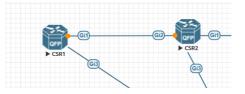

Stub: Stub link connection beside node, Straight style only

For edit Link style use mouse right click on link to call out link style editor.

#### 8.1.6 Edit connection link quality

Right click on the connection link and choose Edit Quality. This function will allow apply on live connection Delay in ms, Jitter in ms, Packet loss in % and rate in kbs. If the Link quality is in use, then Orange indicators on the link will report where it is applied,

It is recommended to apply value divided by 2 on both link interfaces to achieve precise connection quality. In the example below is applied 25% and 25% packet loss, which gives result of 50% packet loss in connection between nodes.

Link Quality:	vEdge2	1 - SW2																
Interface	Delay (	ms)	Jitter (	ms)	Loss (	(%)	Rat	e(kbps)	Interface	Delay	(ms)	Jit	tter (ms)	Los	is (%)	1	Rate(kb	ps)
ge0/2	0	٠	0	٠	25		0		e0/0	0	٠		0	25	5 8	E	0	٠

#### 8.1.7 Suspend or resume link connection

The EVE-Pro has integrated feature to detect connection state on the interface.

For IOL nodes please select enable L1 Keepalive under Edit node to allow suspend feature.

Template	Show unprovisioned templates
Cisco IOL	•
Number of nodes to add	Image
1	x86_64_crb_linux_l2-adventerprisek9-msJ 👻
Name/prefix	
R	
Icon	
Router.png	*
Enable L1 keepalive	

Right click on the connection link and choose Suspend Link. This function will suspend connection between the two nodes. Literally, it will act like disconnected cable from the node, and interface will detect it as no connection. Suspended link will be marked with red dots.

To resume link connection, right click on the link connection and choose Resume Link.

2 .6 Connection	Suspended link connection	Connection

#### Supported nodes with suspend/resume feature:

Supported nodes for Link Suspend/resume	Not supported
IOL vIOS XRv9K CSR CSR SD-WAN ASAv Firepower FTD Juniper vSRX 12.1X47 Juniper vSRX NG Juniper vMX VCP/VFP Juniper VRR Nokia Timos SR 19.5.1 Windows All Linux All Apple OSX Mikrotik Palo Alto F5 Fortigate Checkpoint Cumulus Cyberoam FW Sophos FW SonicWall FW Viptela Velocloud Versa Networks sd-wan pfSense Brocade vADX Barracuda NGFW HP VSR1000	Arista NXOS 9k ASA ported XRv Old Juniper vMX Juniper vQFX Dynamips Titanium Nexus 7.x

**NOTE**: Avoid use Link suspend feature if you have configured:

#### IOL L3 router image with:

If the IOL L3 node interface is configured as DHCP client (ip dhcp), IOL node is attempting to bring up interface in up/up state. If you have enabled Link suspend feature on such configured interface, the node will flap link connection up/down/up.

Same behave is observed if your Serial interface is configured with PPP encapsulation.

#### Other observations:

vIOS L2 image has minor internal issue. LACP protocol does not detect interface state as down/down

#### 8.1.8 Delete connection between nodes

To delete a connection, right click on it and hit "Delete."

#### 8.1.9 Delete Node

To delete a node, right click it and hit "Delete." This is a non-reversable function

NOTE: It is strongly recommended to delete connections from a node before deleting the node itself.

# 8.2 Running labs

#### 8.2.1 Starting lab

Nodes inside a lab may be started individually, in groups, or all at once.

Start all nodes The Start all nodes option will start all nodes on your topology.

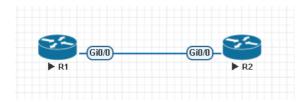

▲ IMPORTANT. Starting all the nodes at once can result in major spikes in CPU utilization. Please make sure you are not using the "Start all nodes" option for heavy labs. Instead, it is recommended to start nodes in small groups.

Starting a node or group of nodes:

Right click on single node or node group and hit "Start."

R1 (1) -G00				
Start	50	50		
Se Wipe		Gi0/0	Group of R1, R2	
🖸 Edit		RZ	Start Selected	
🛅 Delete			Shutdown Selected	
			A	

Running nodes will turn blue. Refer to section 7.11 for node states

# 8.2.2 Interconnecting running nodes (hotlinks)

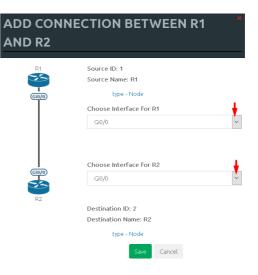

Eve Professional offers the hotlinks feature which allows you to interconnect node in the running state.

Connector symbol. Moving the mouse over a node will make an orange male plug appear. The male plug is used to connect nodes on the drop and drop at lo Polosoc the

topology, drag and drop style. Release the mouse pointer on the second node

22	-1-
▶ R1	▶ R2

### 8.2.3 Link quality delay, packet loss, jitter and rate feature

Please refer to Section 8.1.6

# 8.3 Saving labs

To save a running lab, refer to the vendor recommended save commands for each node.

Example: Cisco: "copy run start" Juniper "commit"

Your current work will be saved in the nodes' NVRAM and the lab can be stopped safely. Starting the lab again will allow you to pick up from where you left off.

**WARNING:** Using the wipe action on a node will clear its NVRAM. This is similar to doing a factory reset on a device.

The configurations of nodes can be exported and used as initial or startup configurations for your labs. To export configurations and configuration sets for labs refer to section **10.1** 

# 8.4 Stopping labs

The Stop all nodes option will stop all nodes on your topology.

NOTE: It is recommended to save your running configurations before you stop your nodes.

Stopping a node or group of nodes:

Right click on single node or node group and hit "Stop."

For individual node Stop options refer to section 7.10.7

# 8.5 Start saved lab

Select the lab you want to start and click "Open". To start Lab refer section 8.2.1

# 8.11 Shared Project/Lab

EVE-NG provide an option to share single running lab between users. It is designed to run single lab for many users who can participate in lab session and configure it.

Note: Lab sharing option can be used between any of EVE NG User roles.

- ✓ Administrator can share lab for other Administrators, Lab Editors or Lab Users.
- ✓ Lab Editor can share lab for Administrators, other Lab Editors or Lab Users

#### ✓ Lab User can share lab for Administrators, Lab Editors or other Lab Users.

#### 8.11.1 Create Project Lab share

Step 1. Navigate to EVE main Lab tree and select which lab you want to share with others. *Do not create shared Project lab from Shared folder to avoid lab names duplication.*

Accordingly, permissions of user roles:

- ✓ Administrator can start, stop or edit lab.
- ✓ Lab Editor can start, stop or edit lab.
- ✓ Lab user can start and stop lab

When you join in the shared lab, on the top of left side bar menu, you will notice the name of lab owner.

Note: If the Lab is been edited by Administrator, changed links connections or nodes, other shared lab users must refresh this lab topology to obtain changes.

#### Note: Parallel Consoles

Telnet Consoles: can be opened parallelly for any user

VNC Console: can be opened parallelly for any user

RDP Console: Only one user at same time can use RDP console to the node

# 8.12 Sticky lab

Pre-requisites for this feature: For Lab selection from the list, the Lab must be upload in the Shared folder by admin first. If Lab Menu is selected to "None", User can close the Lab and open another shared Lab for him.

Applies for User role only. Set the specific Lab for the user "sticky lab". After login in the EVE User will directed only to this lab. He cannot close the lab to get in main management page. User can Start/Stop/Wipe lab, as well save his lab work on the lab devices. Follow Section: 7.3.1.5

# 9 EVE Clouds and Networks

### 9.1 Bridge Network

The EVE Bridge interface acts like an unmanaged Switch. It supports passing along tagged dot1q packets.

**Example:** We have to connect many nodes in a flat (dot1q) network

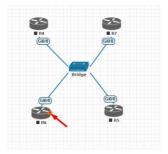

Step 1: Add a Bridge Network onto the topology. There are two ways to do this: Right-clicking on the topology area and selecting "Add Network" or in the sidebar click "Add an Object" and then select "Network." Please refer to sections 7.10.5 and 7.9.1.2

Step 2: Name/prefix can be changed in order to rename your Bridge network. Make sure your network type is set to bridge.

ADD A NEW NETWORK					
Number of networks to add	1				
Name/PreFix	Net 🚽				
Туре	bridge				
Left	1089				
Тор	476				
	Save Cancel				

Step 3: Connect your nodes using the drag and drop connector. Refer to sections 8.1.4 and 7.10.5

### 9.2 The experimental Smart Bridge feature.

Smart bridge feature is available for EVE *Bridge and Internal Networks*. Using smart bridge feature, you are able to assign connected bridge ports with VLAN ID.

5W3					×
	ID 6				
Sm	art Bridge <mark>(</mark> Ex	perimental)			
Enabl	e 802.1ad <mark>(</mark> Ex	perimental)			
NODE ID	NODE NAME	INTERFACE ID	INTERFACE N	AME VLAN ID	
9	SW-IOL1	0	e0/0	0	]
10	SW-IOL2	0	e0/0	0	]
11	R-IOL1	0	e0/0	101	]
	Save	Cancel			

VLAN ID 0 – untagged port with native VLAN 1, used for trunk assignment.

Smart Bridge, enables 802.1q option.

Enable 802.1ad option allows to use bridge for QinQ mode.

### 9.3 Internal Network

Internal cloud network is used as an extended connector between nodes inside of one lab. It is isolated cloud which not visible for other labs or users.

EVE Pro is offering 3 independent Internal clouds/domains. It is isolated from each other. Inside of single lab you can have up to 3 isolated cloud/domain networks. Example of Internal cloud usage below:

Step 1: Add two internal cloud networks onto the topology.

ADD A NEW NETWORK						
Number of networks to add	2					
Name/Prefix	internal					
Туре	internal 🔹					
Left	1345					
Тор	306					
	Save Cancel					

Step 2: Connect your lab nodes to internal cloud. Your configured nodes will work like being connected to the same switch (or the same bridge

in EVE). CDP works. It is convenient if it is necessary to have connections across the lab and you don't want to have connections going from one end of the lab to the other.

### 9.4 **Private Network**

Private cloud network is used as an extended connector between labs in the one user POD. Private cloud is isolated and not visible for other users.

EVE Pro is offering 3 independent Private clouds/domains. It is isolated from each other. Inside of single user POD you can have up to 3 isolated Private cloud/domain networks. Example of Private cloud usage below:

ADD A NEW NETWORK					
Number of networks to add	1				
Name/Prefix	Private				
Туре	private •				
Left	1345				
Тор	306				
	Save Cancel				

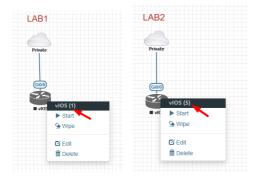

**Example**: Single user is running multi labs (Lab1 and Lab2), and want interconnect it.

Step 1: Add private cloud network onto the topology Lab1.

Step 2: Add private cloud network onto the topology Lab2.

Step 3: Connect your lab node to Private cloud. Your connected nodes in Lab1 and Lab2 will work like being connected to the same network. CDP works. It is convenient if it is necessary to have connections across the multi labs.

▲ **NOTE:** Using Private cloud, avoid to connect nodes with same ID to it. It will raise MAC address collision in your connection. Pic below shows correctly interconnected Node ID1 in Lab1 and Node ID5 in Lab2.

### 9.5 NAT Network

EVE-NG PRO has an embedded NAT interface with the subnet 172.29.129.0/24. This feature is similar to the VMWare NAT interface, but EVE is translating the 172.29.129.0/24 (this subnet is hardcoded in EVE and is not configurable) subnet to EVE's management interface pnet0. NAT network can be changed per your needs, please refer 7.4.1

To add a NAT Cloud onto the EVE topology:

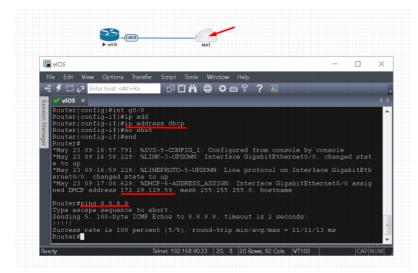

ADD A NEW NETWORK						
Number of networks to add	1					
Name/Prefix	NAT					
Туре	NAT					
Left	935					
Тор	340					
	Save Cancel					

Step 1: Add A New Network onto the topology. There are two ways to do this: Right-clicking on topology area and selecting "Network" or in the sidebar, "Add an Object" and then select "Network."

Step 2: Name/prefix can be changed in order to rename your NAT network. Make sure your network type is set to NAT.

Step 3: Connect your nodes using the drag and drop connector. Refer to sections 8.1.4 and 7.10.5

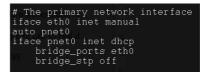

If your EVE management is connected to the Internet, adding a NAT cloud onto the EVE lab enables you to have internet access from within your EVE lab using NAT.

EVE NAT Gateway IP is: 172.29.129.254/24

DHCP is enabled on the EVE NAT Cloud.

### 9.6 Management Cloud0 interface

EVE management interface is also known as the Cloud0 network for labs. The Cloud0 interface is bridged with your EVEs first NIC. "Cloud" is used as an alias to pnet. Pnet is the bridge interface name inside of EVE.

Cloud0 is commonly used inside EVE labs to get management access to nodes running inside EVE from a host machine external to EVE.

- ▲ **IMPORTANT NOTE:** For EVE VMs running on ESXi, with NIC Teaming Network, please follow the steps below to edit the reverse path settings
  - From the Navigator window select Manage > System > Advanced settings.
  - Scroll down or use the search bar to go to the Net.ReversePathFwdCheckPromisc option.
  - Select Net. ReversePathFwdCheckPromisc and click Edit option.
  - In the Edit option Net. ReversePathFwdCheckPromisc window update the New value field to 1 and click Save.
- IMPORTANT NOTE: For EVE VMs running on ESXi, make sure your management interface bridged with the vSwitch (Port group) has the security settings set to Accept. Any port group or vSwitch used to connect an external network to an EVE Cloud network needs to have the:

- Promiscuous mode: "Accept"
   MAC Address changes: "Accept"
   Forged transmits: "Accept"

### vSwitch Settings

🥒 Edit standard virtual switch - vSv	itch0

### EVE Cloud0 bridging table.

Lab name	EVE interface name (inside)	Туре	Notes
Cloud0	pnet0	Bridged	Cloud0/pnet0 is bridged with your primary EVE ethernet port. It is assigned a management IP address used for WEB GUI access. The EVE management subnet can be used as a management network in labs.

Question: How can I obtain my Cloud0 subnet and gateway IP. Many EVE VMs only have a DHCP address assigned on the pnet0 interface.

**Answer:** SSH to EVE and type the following from the CLI:

ip r							
root@eve-nq:~#	# route <sup>packets:146</sup>	errors:0_dropped:t	overru	is U can	rier:O		
Kernel IP rout							
Destination	Gateway	Genmask	Flags	Metric	Ref	Use	Iface
default	192.168.90.1	0.0.0.0	UG	0	0	0	pnet0
172.17.0.0	*	255.255.0.0	U	0	0	0	docker0
172.29.129.0	ateway IP type:	255.255.255.0	U	0	0	0	nat0
192.168.90.0		255.255.255.0	U	0	0	0	pnet0
root@eve-ng:"#	Ŧ						

**Example:** We want to use Cloud0 as a management network for an ASAv node in an EVE lab. From the above-obtained information, we know that our Cloud management subnet is 192.168.90.0 with a mask of 255.255.255.0 and the Gateway IP is 192.168.90.1.

ADD A NEW NETWORK						
1						
Mgmt						
Management(Cloud0)						
737						
163						
Save Cancel						

Step 1: Add A New Network onto the topology. There are two ways to do this: Right-clicking on topology area and selecting "Network" or in the sidebar, "Add an Object" and then select "Network."

Step 2: Name/prefix can be changed in order to rename your Cloud0 network. Make sure your network type is set to Management(Cloud0).

Step 3: Connect your ASAv using the drag and drop connector to the Cloud0 network. Refer to sections 8.1.4 and 7.10.5

Step 4: Start the node and configure the interface connected to Cloud0 with an IP address from the management subnet (192.168.90.0/24 in this example). Make sure you do not assign duplicate IPs.

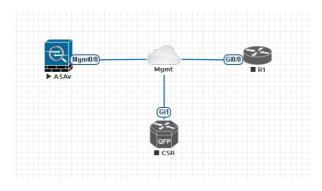

The native management host (home PC) can be used to manage nodes in the EVE lab over https. Example below showing http connection to Fortigate FW node in the EVE lab from native PC using Chrome browser.

	FIT Com	<ul> <li>← → C △ ○ No</li> </ul>		•	3/system/dashboard/1	- x 0 (	□ ×

**NOTE:** Cloud interfaces can be used to connect multiple nodes to a single cloud instance on the topology.

## 9.7 Remove cloud interfaces

For security reasons you can make cloud (Cloud0-9) interfaces invisible for the Lab Editors and Lab Users.

echo -n 2	1 > /opt,	/unetlab/	natonly
ADD A NE	EW NETWO	ORK	×
Number of networks to add	1	E	
Name/Prefix	Net		
lcon	💧 cloud.png	•	
Туре	bridge	•	
Left			
Тор	bridge internal internal2 internal3 private private2	~	
	private3		

To set back Clouds0-9 visible:

```
echo -n 0 > /opt/unetlab/natonly
```

All Clouds 0-9 will remain visible for Admin users.

### 9.8 Other cloud interfaces

Other cloud interfaces can be used to extend a lab connection inside of EVE or bridged with other EVE interfaces to connect external networks or devices.

### EVE Cloud bridging table.

Lab cloud name	EVE interface name (inside)	Туре	ESXi VM corresponding interface	VMware Workstation corresponding interface	Bare HW Server	Notes
Cloud0	Pnet0	bridged	Network adapter 1	Network Adapter	First ethernet Eth0	Cloud0/pnet0 is bridged with your primary EVE ethernet port. It is assigned a management IP address used for WEB GUI access. The EVE management subnet can be used as management network in the labs.
Cloud1	Pnet1	bridged	Network adapter 2	Network Adapter 2	Second ethernet Eth1	Cloud1 can be bridged with your EVE second ethernet port to achieve connection to another network or device. The IP address is not required to be configured on it. It will act like a pure bridge your external connection with EVE lab node.
Cloud2	Pnet2	bridged	Network adapter 3	Network Adapter 3	Third ethernet Eth2	Same as Cloud1
Cloud3	Pnet3	bridged	Network adapter 4	Network Adapter 4	Fourth ethernet Eth3	Same as Cloud1
Cloud4-9	Pnet4-9	bridged	Network adapter 5-10	Network Adapter 5-10		Same as Cloud1

If some of the clouds (e.g. Cloud1) are bridged to another ethernet (VMnet) you can connect your EVE lab to an external VM or physical device (like e.g. a switch, IP phone or access point).

▲ For ESXi make sure that you have set Promiscuous mode security settings on the vSwitch and Port group to Accept. Please refer to section 9.6

¢

The next sections will explain how you can use Cloud networks in EVE to connect to other external (e.g. VMWare) VMs or physical devices.

### 9.9 Connecting external VM machines to the EVE Lab

### 9.9.1 ESXi VM machines

External ESXi VM machines can be connected to EVE labs using cloud interfaces.

NOTE: A single Cloud interface can be used to connect more than one external VM to the EVE lab.

**Example:** Connecting a Web Security Appliance (WSA) to the lab using the Cloud1 interface.

Step 1: Create a new or use an existing portgroup on your ESXi and assign it to EVE and WSA VMs as shown below. Make sure you have set Promiscuous mode on the vSwitch (portgroup WSA-MGMT) to Accept.

A NOTE: VM machines must be in a powered off state to assign network interfaces.

#### Portgroup WSA-MGMT (with vSwitch5 as parent) settings:

WSA-MGMT

### EVE Lab connected to the WSA (Cloud1)

- NOTE: ESXi WSA VM obtained the IP 192.168.10.3 from the DHCP pool on the lab switch. The gateway is 192.168.10.1
- ▲ NOTE: The Firefox Docker node user for management obtained the IP 192.168.10.2 from the DHCP pool configured on the lab switch.

### 9.9.2 VMWare workstation machines

External (meaning not running inside EVE) VMWare workstation machines can be connected to EVE labs using cloud interfaces.

NOTE: A single Cloud interface can be used to connect more than one external VM to the EVE lab.

**Example:** Connecting Web security Appliance (WSA) to the lab using **Cloud2** interface.

**NOTE:** VMs must be in a powered off state to assign network interfaces.

Step 1: Open your VMWare Workstation Virtual Network Editor and configure the VMnet interface for the Cloud and WSA VMs. If necessary add a new VMnet. The example below is showing VMnet2 Settings in VMWare workstation. DHCP must be disabled for VMnet2.

#### Virtual Network Editor settings:

### 9.10 Connecting EVE Lab to a physical device

### 9.10.1 ESXi EVE

To connect a physical device (e.g. router, switch) to an EVE lab over a cloud interface, we have to bridge the ESXi NICs ethernet port to a VMnet interface.

- **IMPORTANT NOTE:** Make sure that you have set Security Policy (Promiscuous mode, forged transmits and MAC changes) settings on the vSwitch and Port group to Accept.
- IMPORTANT NOTE: If you are building trunk between EVE lab node to real Switch, please make sure you have set your ESXi vSwitch interface to accept all vlans. Reference: <u>https://kb.vmware.com/s/article/1004074</u>
- IMPORTANT NOTE: For EVE VMs running on ESXi, with NIC Teaming Network, please follow the steps below to edit the reverse path settings
  - From the Navigator window select Manage > System > Advanced settings.
  - Scroll down or use the search bar to go to the Net.ReversePathFwdCheckPromisc option.
  - Select **Net**. **ReversePathFwdCheckPromisc** and click Edit option.
  - In the Edit option Net. ReversePathFwdCheckPromisc window update the New value field to 1 and click Save.

**The Example** below is showing ESXi Server settings of the virtual network bridged to the physical interface.

Logical chain of the networking bridge:

EVE Lab Cloud0 →Portgroup "Management 90 UD"→vSwitch 1→Physical Adapter eth1

### 9.10.2 VMWare workstation EVE

Similar to the ESXi connection, it is recommended to have a second ethernet interface on your PC. It can be a USB ethernet extender as well. Not all ethernet adapters fully support a layer2 connectivity over it. MS Windows OS itself strips off any tags added to the packet. Even if your NIC supports 802.1q VLAN tagging, Windows 10 strips these tags off. The example below will show a Windows 10 host connected to a physical 3750G-24 switch. The Windows 10 Host has an Intel (R) PRO/1000 PT Dual port server adapter and is bridged with VMWare workstation (version 14) VMnets.

Virtual Network Editor Settings, Bridged VMnet interfaces with Real NIC Ports

The following solution allows Windows hosts to transmit tagged packets over ethernet. This has been used in the example above.

Warning. You are making changes to your Windows registry files! This is at your own risk.

https://www.intel.co.uk/content/www/uk/en/support/articles/000005498/network-and-io/ethernet-products.html

### 9.10.3 Bare metal server EVE

A physical server usually has more than one ethernet port, free ports can be bridged with EVE clouds and used for external connections. EVEs internal interface settings are already bridged in order, pnet0-9 are mapped to eth0-9. Refer to the bridging table in section 9.7

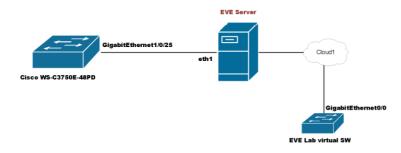

cat /etc/network/interfaces

Basically, your servers physical port eth0 is bridged to pnet0 which is Cloud0 in your labs, eth1 is bridged to pnet1 which is Cloud1 in your labs (and so on). Refer to the bridging table in section 9.7

The example below shows how to connect a bare-metal EVE server with a physical Cisco 3750E switch.

### Physical connection topology:

The EVE lab switch's CDP neighbour is the 3750E switch's port Gig 1/0/25: A trunk has been configured between the EVE lab switch and the physical 3750E switch.

# **10 Advanced EVE Lab features**

### 10.1 Lab design objects

EVE Pro has drawing elements integrates to add drawings and text information to the lab topology. Objects can be placed on the topology in two ways.

Example below, EVE lab with design elements:

### 10.1.1 Custom shape

There are three custom shapes that can be added to the topology: square, round square and circle (sphere).

#### Type: Square, round square or circle

**Name**: This field can be filled with your preferred shape's name. If the field is left empty, EVE will generate a name for the shape.

Border type: Two options: line or dashed

ADD CUSTOM S	НАРЕ	×
Туре	square	~
Name	Name	
Border-type	solid	~
Border-width	5	۲
Border-color		
Background- color		
Save Cancel		

**Border width**: Increase or decrease the width of the border. This can be edited later in the "Shape Edit" menu.

**Border colour**: Allows you to choose a colour for the shape's border. This can be edited later in the "Shape Edit" menu.

**Background colour**: Allows you to choose a colour to fill your shape with. This can be edited later in the "Shape Edit" menu.

Example: Added a circle and square on the topology. Shapes can be moved around the topology drag and drop style (click and move with mouse).

### 10.1.2 Resize square or circle objects

Move your mouse over the right bottom corner of the object until a corner symbol appears. Left click and drag your mouse to change object size or style (rectangle, sphere)

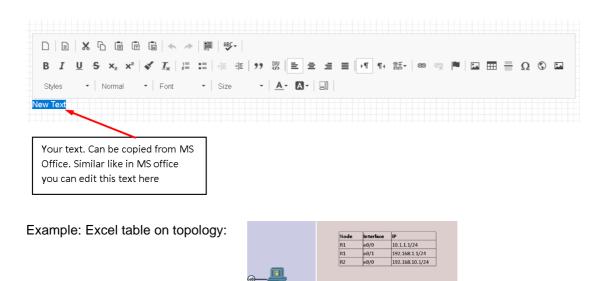

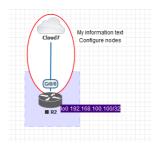

### 10.1.3 Text

It is also possible to add text or other MS Office objects to your EVE topology. Rich HTML Office option allows you to copy texts from MS Word, Excel or Visio.

Example: text objects added to the topology.

Example: Visio object added to the topology

### 10.1.4 Add picture to the topology

Custom images may be added by using HTML editor:

Step 1: Add a text object to the topology and press Image button for import.

Step 2: User browse to import your image.

BIUS	<ul> <li>○ 圖 圖   ◆ →   罪   麥·  </li> <li>5 ×, ×<sup>i</sup>   ✓ I<sub>x</sub>   二 二   = =   ○ 茨 [ ▶] ≤ 三 ≡</li> <li>Normal ·   Fort ·   Size ·   ▲· 집·   副  </li> </ul>	
	lmage	New Text
	General Advanced	
	Upload: Browse No fie selected.	
	OKCanc	el

Step 3: Double click on object you wish to resize, then change width and height.

D   B   X PD   B   B     - B I <u>U</u> S × <sub>s</sub> × <sup>s</sup>   √ I <sub>x</sub> Styles →   Normal →   For	:= :=   本   9:		· [•¶ ¶• ☷•   ∞ ∞  ■   ⊑	⊞≣Ω©⊠⊡
			d Virtual Envir Next Generation	ronment
Image		×		``
General Advan	ced			
Alternative Text				
Width Height 240 96	ock Ratio			
Align VSpace	HSpace	Border		
<not set=""> V 0</not>	0	0		
		OK Cancel		

### **10.1.5 Custom object linking with telnet or other protocol**

This feature allows you to link your eve topology object with external source. It can be web site or other protocol like Telnet to call out console for external object.

Step 1. Add the text or picture using HTML editor. Sections 10.1.3 or 10.1.4.

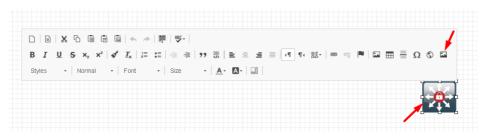

Example: Custom icon added from MS Visio.

Step 2. Position your object in place where you want it to be.

### Step 3. Highlight text or activate object.

Step 4. Use link button to assign custom protocol for your object. Example: Protocol Other, type in URL: telnet://10.1.1.10

Step 4. Tab Target, Example: Target/New Window

	I   ∳-	
B I <u>U</u> S ×₂ ײ   🖋 I <sub>×</sub>   ≟≣ ∷≣	ﷺ ⋕   99 號   主 主 ☰   •¶ ¶+ 話+   ∞ ∞	
Styles - Normal - Font -	Size - A. A. 31	
	Link	×
	Link Info Target Advanced	ůůů
	Target New Window (_blank)	

Step 5. OK for Save.

**NOTE** to edit picture object assigned with link, use mouse mark area of object and it and double click on area beside object.

### 10.1.6 Line object

Line object allows you to draw and design lines on the topology.

Step 1. Add a Line object to the topology

ADD LINE			
Width	2	\$	
Arrow Style	→ single arrow	•	
Paint Style	Solid	-	
Line Style	Straight	•	
Line Color			
Line Label			
Save Cance	el		

**Width**: Increase or decrease the width of the line. This can be edited later in the "Shape Edit" menu.

**Arrow Style**: Allows you to make arrows to your Line object. Single arrow, Double arrows or no Plain. This can be edited later in the "Shape Edit" menu.

**Paint Style**: Allows you to solid or dashed style for line. This can be edited later in the "Shape Edit" menu.

**Line Style**: Allows you to choose a style Straight, Bezier, Flowchart or StateMachine for the line. This can be edited later in the "Shape Edit" menu.

**Line colour**: Allows you to choose a colour for the line. This can be edited later in the "Shape Edit" menu.

Line label: Allows you to add a label on the line. This can be edited later in the "Shape Edit" menu.

Example, Dashed, Bezier, double arrow line with label:

**Positioning and moving line object.** Line object has invisible connection points at the ends. Use mouse to find that point, drag and drop move line connection point to your preferred lab location. Use mouse to move other line endpoint on lab location.

To move all line, use CTRL to mark line endpoint and move line over topology to position it.

Edit Line object. Right click on line to call out edit window:

Style: iface:node23:1										
Style		Link color	Pos ge0/0	Pos n/a	Link Style		Link Label	Pos Label	Curvine	155
Solid	$\sim$				Bezier	$\sim$			150	٠

### **10.1.7 Nodes connection links design**

#### Refer Section 8.1.5

Edit: 2 Duplicate Send To Back Send To Fron Edit Delete

10.1.8 Cloning objects and overlay positions

Right click on the object you want to clone and choose "Duplicate". You can also change the object's overlay position using the "Send to Back" or "Send to front" options.

At the bottom of the "Topology Canvas" page, additional object options will appear

**Z-index**: Used to change the object's overlay position on the "Topology Canvas." An object with a higher numerically valued z-index will cover an object with a lower numerically valued z-indexed.

**Example**: The blue object has a z-index of -1 and the orange object's z-index is 0. Orange object is top over blue object.

Border width: Used to change the object's border width.

Border type: Used to change the border style of the object between solid and dashed.

Border colour: Used to change the colour of the object's border

Background colour: Used to change the background colour of the object

**Transparent:** Turns off background colour (filling) and makes the object transparent.

Save Cancel

Rotate: Used to rotate the object on the	topology.
Name: Used to change the object's name	e.
To save the object, press Save (green bu	utton).

### 10.1.10 Lock objects movement

The "Lock Lab" feature prevents objects from being moved around on the canvas (among other things). For more information about this feature, refer to section 7.9.14.

### 10.2 Custom design logical topology

EVE Pro includes a feature to upload your own custom topology picture and map nodes to it for easy access.

### 10.2.1 Custom design upload

Before you upload a custom picture in the lab, make sure it is in .png or jpg format with resolution 130-150x130-150 pixels.

TIP: It is best is to create a topology in the MS Visio and after convert it to the .png picture format with resolution 140x140.

Step 1: Open "Add an Object" and then "Pictures" from the left sidebar or right click on a free area on topology canvas and hit "Add Picture."

↓ Trar

Step 2: Browse your PC for a .png or .jpg file and hit "Add".

ADD PIC	TURE
Name	Topology
Picture	Browse Arista-MLAG_lab EVE2.png
	Add Cancel

Once the picture is added to the topology canvas, the sidebar will display a new option: "Logical maps"

© EVE-NG LTD

Step 3: Open the "I	Logical maps" menu item.
---------------------	--------------------------

Pictures window	management
ць	Delete uploaded pictu

	Delete uploaded picture from the lab				
C	Image Map: Map nodes to places in the picture				
Topology	Display uploaded picture. Work with lab and custom topology				
	Zoom/unzoom uploaded custom topology				
*	Makes the window transparent to see the "Topology Canvas" behind it. Clicking again returns to the normal view.				
*	Close "Pictures" window.				

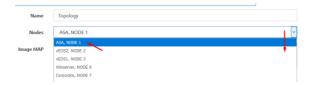

### 10.2.2 Custom topology mapping

This feature allows you to map the lab nodes to your custom topology picture.

Step 1: Open the Image Map window:

Step 2: Select a node, from the dropdown menu, that you want to map to the topology.

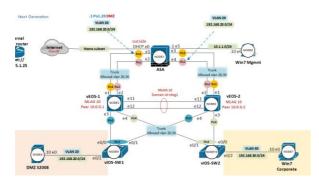

Step 3: Move your mouse over a node icon on the "Image Map" and click to map it. The grey circle means that the node is mapped.

Step 5: OPTIONAL. You can also add a mapping for a device external to your EVE server in order to telnet, VNC, or RDP to it. This way you can open sessions to all your devices (whether external or internal) in one place.

Select from r	Menu: Nodes	CUSTOM , NODE outside lab	~			
And map with node on topology.						
Change imag	ge map adding prot	tocol, IP and port.				
Image MAP	<area alt="i&lt;/th&gt;&lt;th&gt;mg" coords="102,286,30" href="proto://CUSTOM_IP:CUSTOM_PORT" shape="circle"/>	.:				
Image MAP	<area alt="ir&lt;/th&gt;&lt;th&gt;ng" coords="102,286,30" href="telnet://172.22.7.18:23" shape="circle"/>					
Step 6: Save	e your mapping and	refresh the browser with F5. Save Cancel				

### 10.2.3 Delete topology or mapping

To delete a single node mapping, right click on node mapping circle and click "Delete."

To delete the entire custom topology, click delete.

î ci	Гороlоду
Delete	

### 10.3 Multi-configuration sets export feature

Eve Professional/Learning Center includes a "Multi-configuration Set" feature that allows you to save and manage multiple sets of configurations in a single lab. The "Configuration Export" and "Startup-configs" features will allow you to set these saved configurations as startup configs for your nodes when they boot.

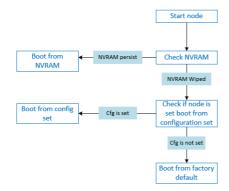

IMPORTANT NOTE: Before you start using the "Multi-configuration Set" feature, you must complete at least one configuration export.

STARTUP-CONFIGS			
		Config Set	Default v
8	R1	QFF	
3	R2	OFF	
۵	SW1	CFF	
۵	SW2	OFF	

Nodes will be greyed out without the option to enable "Startupconfigs" until you complete at least one configuration export for each node.

### Node boot order:

**NVRAM**: NVRAM is used as writable permanent storage for the startup configuration. During the boot process, the node will always check NVRAM for a saved configuration. Saving the configuration to NVRAM requires a vendor specific command. Cisco: copy run startup (wr), Juniper: commit, etc. It is MANDATORY to save a node's configuration before you can export it.

**Exported configuration**: A node configuration that has been exported from the node. It can be used to backup configurations or to set them as startup-configs.

**Wipe node**: Wiping a node will erase the NVRAM (running config) or the temporary image snapshot, depending on the type of node. Upon a successful wipe, the node will boot with the factory default configuration or the configuration included in the base image you are using. If you have the "Startup-config" feature enabled for the node, then it will boot with the chosen config set. You must wipe a node after changing certain node template settings like the image or startup-config. You also must wipe the node the first time you want to enable the "Startup-config" feature.

Factory default configuration: The base configuration that is applied from the manufacturer.

### **10.3.1 Supported nodes for configuration exports**

Cisco Dynamips all nodes Cisco IOL (IOS on Linux) Cisco ASA Cisco ASAv Cisco CSR1000v Cisco Catalyst 8000v Cisco Catalyst 9000v Cisco Nexus 9K Cisco Nexus Titanium

Cisco vIOS L3 Cisco vIOS L2 Cisco Viptela vEdge, vSmart, vBond, till version 18.4 only, version 19.x and later is not supported due implemented password setup feature on the first boot. Cisco XRv Cisco XRv9K Juniper VRR Juniper VMX Juniper vMX-NG JunipervQFX JunipervSRX Juniper vSRX-NG Mikrotik PFsense FW **Timos Alcatel** vEOS Arista Aruba CX Switch

### 10.3.2 Startup config management

#### 10.3.2.1 Global commands

Configurations can be managed via the "Startup-configs window which can be accessed from the sidebar menu while on the Topology page.

### Topology page, More Options:

### 10.3.2.2 Individual node commands

### Select node, right click

Wipe: Wipes the NVRAM for a single node

**Export CFG**: Exports the configuration for a single node

### 10.3.2.3 Multiple selected nodes commands

\$10	(\$1/0)	Group of R1, R2
0		Start Selected
×	E	Stop Selected
$\backslash$	/	Selected

P Cisco-IOS V & Dark V I 12px V Ace Editor OF	Ace Editor. Different vendor configuration
	edit option. Just Text visual format.

### **10.3.3 Export Default configuration set**

NOTE: The default configuration set is hardcoded. It is mandatory to export a nodes config before you can start building custom configuration sets.

#### Example:

Step 1: MANDATORY: Configure your nodes and make sure you applied the vendor specific command to save the running configuration to NVRAM. If you do not save the configuration, it will not be exported and in the notification area, you will receive an error message stating the node cannot be exported.

In this example the nodes have been configured with hostnames only and the configurations have been saved to NVRAM.

Step 2: Chose any method to export configurations to the Default Config Set. You can use export a single node, a group of nodes, or all nodes. Only supported nodes configurations will be exported.

S10 - S10	Group of R1, R2, SW1, SW2	Export All: done
▶R1	► R ✓ ► Start Selected	
e0/0	(e0/0)	R1: config exported
	Stop Selected	
\	Selected	R1: Starting export, please wait
	Console To Selected Nodes	RT. Starting export, please wait
60/0		
	LExport all CFGs	R2: config exported
	Set nodes startup-cfg to default configset	
• 5W1 (e3/3) (e3/3) (e3/3) (b 5W2)	Ref nodes startup-cfg to none	R2: Starting export, please wait
	P Horizontal Align	
	Vertical Align	SW1: config exported
	⊙ Circular Align	
		SW1: Starting export, please wait
	Delete nodes startup-cfg	
	Delete Selected	SW2: config exported
		SW2: Starting export, please wait

Step 3: In the example below a group of nodes were selected to export configurations.

Default configuration set is completed. The notification area will display "Export All: done" when complete.

NOTE: you can configure your nodes with your preferred configuration and make it the default configuration set.

Export Selected: Starting

### 10.3.4 Boot nodes from exported Default config set

Step 1: Stop all nodes

Step 2: Open sidebar and click Startup-configs. Make sure your config is set to default and the nodes config switch is green (switch on/off beside node). Press the green "Apply Config Set" button (Set all nodes to selected config set) and all your nodes will boot with the default config set after wiping them.

STARTUP-CONFIGS				
	Config Set	Default ~	+ 🛛 🗙 ± ±	<u>, po</u>
2 R1	4 ON			
29 R2	4 ON			
SW1	4 ON			
SW2	4 ON			

Step 3: Wipe nodes. For more information refer to section 8.1.3

Step 4: Start nodes

10.3.5 Export new custom config set

This section will describe how to create a new custom configuration set for the same example above.

A Make sure your nodes are running and booted from the default set.

Step 1: Create new custom named (e.g. "IP Addressing") configuration set, Press Add new config set.

Config Set	Default ~	+ 🛛 🗴 ±
Name it ar	nd press Add.	
CONFIG SET		
Name	IP Addressing	

The new configuration set is created.

Add Cancel

NOTE: It will duplicate the default configuration set under your IP Addressing config set.

Step 2: Select newly created Config set IP Addressing and hit the green confirm button (Set all nodes to selected config set) on the right.

Step 3: Make sure your nodes have the Startup-config slider switched to "ON" and verify the config set menu has the "IP Addressing" set selected.

	Config Set IP Addressing 🛁	+ 0 I ± ±	
🌁 R1	∱ _ ON _ ≛ _ ▲		Ace Editor
🚳 R2	✓ ON no ip address shutdown		^
SW1	✤ ow serial restart-delay 0		
SW2	★ ON ip forward-protocol nd		

Step 4: Return back to your lab and continue configuring nodes until your preferred configuration is complete. In this Example, the IP addresses are configured on the nodes.

Step 5: **IMPORTANT**: YOU MUST save the configuration on all nodes, even if the configuration was not changed.

Step 6: Use any method (individual, group or all) to export the new configurations to the IP Addressing set.

Step 7: You can verify that the configs were exported by re-opening the "Startup-config" window.

Make sure the correct config set is selected, and check if the configuration is exported for the node or nodes.

STARTUP-CONFIGS							
		Config Set	IP Addressing 🗸	+ 0	× ± ±		
25 R1	4 ON	± 4					
😂 R2	4 ON	1					
<ul> <li>SW1</li> </ul>	4 ON	interface Ethernet0/ no shutdown	3				
SW2	4 ON	no ip address shutdown					
		1					
		interface Serial1/0 no shutdown					
		ip address 10.1.1.1 2	255.255.255.252				
		serial restart-delay 0					
		1					
		interface Serial1/1					
		no shutdown					
		no ip address					
		shutdown					
		serial restart-delay 0	3				

Repeat steps 1-7 of this section for the next configuration set.

### **10.3.6 Edit exported configurations**

It is possible to edit your configurations for the nodes manually.

Step 1: Select a config set and apply it with the green confirm button (Set all nodes to selected config set) on the right.

Config Set	Default 🗸		+ 🛛 🗙 🛓	*	
	Default	_			
	IP Addressing				/

Step 2: Select the node you want to edit the configuration of and make your changes. Click "Save" when you are finished.

To set your lab nodes to boot from the exported configuration, follow the steps below:
Step 1: Wipe nodes. Refer to section 8.1.3 for information about wiping nodes and the order of
operations during boot.

Step 2: Open the "Startup-configs" window from the left sidebar.

Step 3: Select your preferred config set and apply it by pressing the green "Apply Config Set" button on the right (Set all nodes to selected config set).

Step 3: Apply the config set to all nodes with the green "Apply Config Set" button

Step 4: Start nodes.

10.3.8 Set lab to boot from none

on the right (Set all nodes to selected config set).

10.3.7 Set lab to boot from config set

interface names.

To reset your lab nodes' configuration to factory default follow the steps below:

Step 1: Wipe nodes. Refer to section 8.1.3 for information about wiping nodes and the order of operations during boot.

Step 2: Open the "Startup-config" window from the left sidebar

Step 3: Press the red "Config Reset" button on the right (Set all nodes to no startup-config).

Step 4: Start nodes

A NOTE: you can manually copy/paste any configuration into the config set editor and apply it to your node. Make sure your configuration interfaces match the lab node's

## 10.3.9 Delete a config set

Select the config set you want to delete and click the "Delete" button. You cannot delete the default config set.

Config Set	IP Addressing	+ 🛛 🗴 🛎

## 10.3.10 Rename a config set

Step 1: Select the config set you want to rename. Change the name and hit "Save." You cannot rename the default config set.

Config Set	IP Addressing V	+	<u>*</u>
CONFIG SET Name IP Addressing new Critic Crince	×		

# 10.3.11 Export a config set to your local PC

It is possible to export configuration sets to your local PC.

Step 1: Select the config set you wish to export.

Config Set	IP Addressing V	+ 🛛 🗙 ± ±
Opening IP Addressing.zip	×	
You have chosen to open: IP Addressing.zip which is: WinRAR ZIP archive (5.7 kB) from: blob:		
What should Firefox do with this file? Qpen with WinRAR archiver (default Save File Do this automatically for files like this 1		
_ too ons gotomatically for files like this i	OK Cancel	

Step 2: Save it on your local PC.

NOTE: You can open this archive and edit your node configs manually. Archived configs are saved in txt format. After editing you can archive it back to .zip format and import it in EVE.

## 10.3.12 Import config set from local PC.

It is possible to import config sets to your lab.

+	Ø	×	±	*

Option 2: Stop the node, right-click on the node and click "Edit." Select your preferred config set for the node and click "Save."

Default	*.
None	
IP Addressing	
NEW IP addressing	

## 10.3.16 Lab config script timeout

Lab config script timeout is used when nodes are waiting to boot from a config set. The node will literally wait during boot until the configuration is applied from the config set.

Hit "More actions" and then "Edit lab" from the sidebar. Set the config script timeout in seconds. By default, this timer is set to 300 seconds for new labs.

NOTE: For heavy labs and nodes with			
long configurations, you can raise this	Config Script Timeout	800	Seconds
timer to 600 seconds or higher.			

# 10.4 Lab Timer

For self-controlled lab timing, EVE Pro has integrated a "Lab Timer" feature.

#### **10.4.1** Set the Lab Countdown Timer

Step 1: Click "More Options" and then "Edit Lab" from the sidebar.

Step 2: Set the "Lab Countdown Timer" in seconds for the time you wish to display on the topology and confirm by clicking "Save". 7200 seconds = 120 minutes.

Config Script Timeout	800	Seconds
Lab Countdown Timer	7200	Seconds

Step 3: To start your lab, be sure all nodes are running.

Step 4: Hit "Lock Lab" from the sidebar. A red sign means that the lab is locked.

Step 5: When ready to start, click "Refresh Topology" from the sidebar. The countdown timer will be displayed on the "Topology Page" in the top left corner.

# **10.4.2** Stop the Lab Countdown Timer

Step 1: Click "Unlock Lab" Grey means that the lab is unlocked.

O Lock Lab

Step 2: Hit "Refresh Topology" from the sidebar

**MOTE:** The lab timer does not stop nodes or disconnect sessions from the lab.

# 10.5 Lab Tasks

Lab task or workbook creation feature.

## **10.5.1** Creating a new simple task

Step 1: On the side bar click on "Lab Task(s)" to open the Lab Task(s) management window.

C Defecte to a classe
S Refresh topology
ଵ – – – +
<li>Status</li>
🔲 Lab details
🔊 Lab Task(s)
🟴 Lab Chat
😃 Close lab
🚅 Lock Lab

Step 2: Click on the "+" sign to create a new task. Enter the name of the task name and click on "Add" to create the task.

LAB TASK	(S)		
+ New Task

# 10.5.8 Delete a task

Step 1: From the Side bar click on "Task Management":

Step 2. Click on the delete symbol next to the task name which you want to delete.

# **11 Wireshark capture**

All EVE-NG Professional and Learning Centre console types have the integrated Wireshark capture feature. This means that it is not necessary to have Wireshark installed on the client machine you are using to access EVE with.

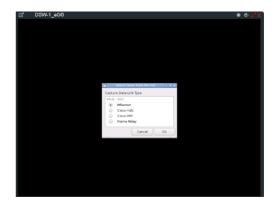

EVE-NG Professional currently supports ethernet interface capturing only.

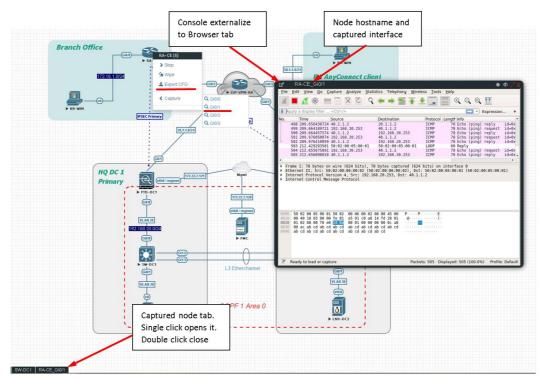

# **11.1 Native Console Wireshark capturing**

Step 1: Right click on the node you wish to capture, choose "Capture" and then the relevant interface. The capture will open in an HTML session. EVE-PRO supports capture for ethernet and serial interfaces.

Select the interface frame type which will be captured:

- Ethernet for Ethernet, Fast Ethernet, Gigabit Ethernet.
- Serial interface frames: HDLC, PPP or Frame Relay.

Step 2: To save the captured file to your client PC, stop the capture and choose File/Save As

Apply a display filter .	<ctrl-></ctrl->

Step 4: Chose the path to save the captured file,

#### **IMPORTANT**:

/nobody/thinclient\_drives/media/nobody/thinclient\_drives/GUACFS/Download/

Enter a name for captured file. Press Save.

Step 4: A window will open that will allow you to save your captured file on your client PC. If the client PC's browser is set to download automatically, your captured file will be saved in the default browser download folder.

# **12 Thinclient File Exchange**

**NOTE:** Thinclient file exchange feature is available for HTML5 or desktop HTML5 consoles only. Make sure you are logged in EVE with one of it.

The Thinclient file exchange feature allows you to transfer files between your native client workstation and the integrated Docker Desktop. It is used when managing EVE via HTML5 consoles. This feature eliminates the need for file transfer software on your client workstation and makes it very easy to import/export labs or download Wireshark captures.

# 12.1 Thinclient files downloading

The Thinclient file exchange feature allows you to download files from your EVE Server over an HTTP/HTTPS session to your client PC. Examples below will show you how to download exported lab files. This feature is not restricted to just lab files or Wireshark captures. It can be used to download or upload any miscellaneous files you may need.

Example: HTML5 console to server-gui Docker node: We want to export our test.txt file and download it to our client PC over HTML5.

# 12.2 Thinclient File upload

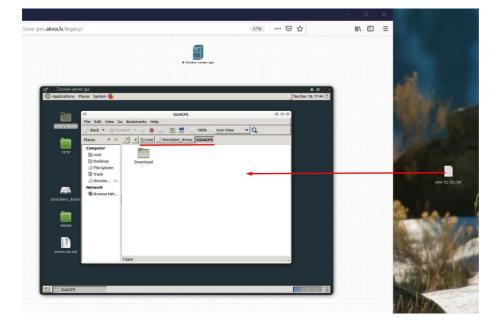

Sometimes it is necessary to upload files to your EVE labs. The Thinclient file exchange feature allows you to upload files from your client PC to the EVE HTML5 server-gui station. The

example below will show you how to upload a text file to the EVE HTML5 server-gui station. Any other files can be uploaded the same way.

Step 1: Adjust your browser so that you can see it and the file that you want to transfer.

Step 2: On the EVE HTML5 Desktop navigate to: thinclient\_drives/GUACFS/ and drag and drop the file from your client PC to opened location on HTML5 Desktop.

Step 3: Next you will see a notification in the bottom right corner.

# **12.3** Other Thinclient file operations

Files that have been uploaded via the thinclient feature can also be transferred to nodes inside your EVE labs via TFTP. In the example below we have uploaded a config file (sw.txt) and would like to transfer it to node R1.

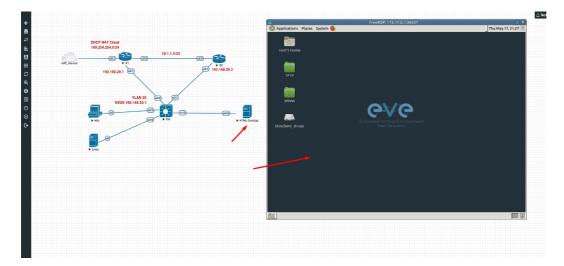

Step 1: Add the **eve-gui-server** docker node to your lab and edit its settings. Set the console type to RDP and configure the IP address settings (DHCP or static) accordingly so that the

docker node can reach the destination node (R1 in this example). For Docker IP addressing please refer to section 13

Step 2: Click on the **eve-gui-server** docker node to open an RDP session.

Step 3: Open the thinclient\_drives location where you uploaded your file to:

/thinclient\_drives/media/nobody/thinclient\_drives/GUACFS/

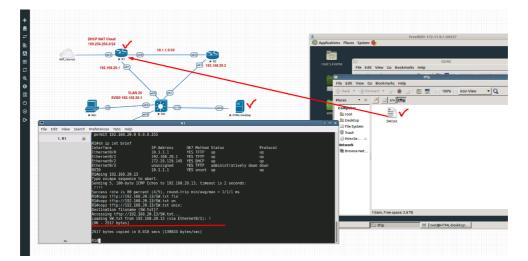

Next, drag and drop your file to the desktop folder named TFTP.

# **13 Dockers**

# 13.1 EVE integrated docker stations

EVE-NG Professional and Learning Centre edition have integrated Docker stations that allows your server to use its resources more efficiently. Dockers offer the advantage of not having to duplicate processes already running on the host system. With a Docker, you run only the processes you need for the hosted application. In comparison, virtual machines have to run a complete guest operating system, including many of the same processes that are already running on the server host.

▲ IMPORTANT NOTE: EVE Docker stations for html console access are using network 172.17.0.0/16. Please avoid use this network on the EVE management or other clouds or interfaces.

# 13.1.1 Docker Machines

#### eve-gui-server (default)

- Fully featured Linux workstation with integrated Thinclient. For more information on the Thinclient operation please refer to section 12.
- napalm
- ansible
- python
- iperf3
- RDP console
- DHCP or Static IP address
- WWW Server (web page home directory www is located on desktop)
- TFTP Server (for access to TFTP server, root/eve or nobody/eve, home directory TFTP is located on desktop)
- FTP server (for access to FTP server, root/eve, home directory for ftp is root)
- Java Integration for ASDM access to Cisco ASA/IPS. For access to ASDM where Java is required, please follow this reference link:

https://192.168.100.5/admin/public/asdm.jnlp

Where 192.168.100.5 is the ASA IP for ASDM connection

NOTE: Older ASA require to configure extra SSL encryption to communicate with Java on the docker station. ASA 9.1.5 CLI:

ssl encryption aes256-shal

Example: Access to ASAv ASDM from Docker server-gui station

# 13.1.2 Docker DHCP IP address setup

EVE integrated Docker stations have two options for setting an IP address.

### DHCP IP address option.

Step 1: Add the node to the topology and make sure the DHCP option is **enabled** under the edit node window. Refer to section 13.2 for the correct console type.

Step 2: Ensure the docker's DHCP request can reach a DHCP server either in your lab or externally through a Cloud Network like Cloud0.

# 13.1.3 Docker Static IP and MAC address setup

Step 1: Add the node to the topology and make sure the DHCP option is **disabled** under the edit node window Reference section 13.2 for the correct console type.

Step 2: On the left sidebar menu open Startup-config and use the example syntax below to set the ip for your Docker node. Make sure you are using the exact syntax for your static IP setup:

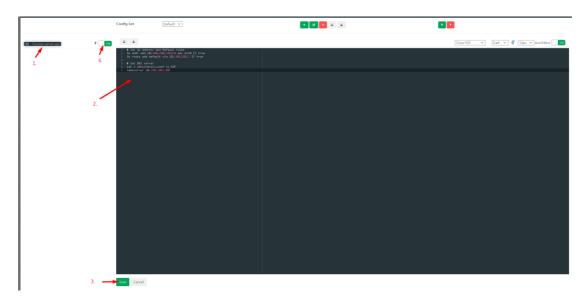

```
# Set ip address and Default route
ip addr add 10.100.100.103/24 dev eth0 || true
ip route add default via 10.100.100.1 || true
```

# Set DNS server
cat > /etc/resolv.conf << EOF
nameserver 8.8.8.8
EOF</pre>

Step 2.1 (Optional): On the left sidebar menu open Startup-config and use the example syntax below to set the custom MAC for your Docker node. Make sure you are using the exact syntax for your static MAC setup:

```
# Set ip address and Default route
ip link set dev eth0 address XX:XX:XX:XX:XX || true
ip addr add 10.100.100.103/24 dev eth0 || true
ip route add default via 10.100.100.1 || true
# Set DNS server
cat > /etc/resolv.conf << EOF
nameserver 8.8.8.8
EOF
```

Step 3: Press the Save button below and switch the node to boot from the startup-config.

## 13.1.4 Docker multi interfaces setup

Step 1: Add the node to the topology and make sure the DHCP option is **disabled** under the edit node window Reference section 13.2 for the correct console type.

Step 2: On the left sidebar menu open Startup-config and use the example syntax below to set the ip for your Docker node. Make sure you are using the exact syntax for your static IP setup. It is recommended to add static routes under interfaces to reach specific networks if required.

# Set ip address eth0

```
ip addr add 192.168.1.200/24 dev eth0 || true
ip route add default via 192.168.1.1 || true
# Set ip address eth1
ip addr add 172.16.1.201/24 dev eth1 || true
# Set static route for eth1
ip route add 10.100.100.0/24 via 172.16.1.1 dev eth1 || true
# Set ip address eth2
ip addr add 10.1.1.10/24 dev eth2 || true
# Set static route for eth2
ip route add 10.10.10.0/24 via 10.1.1.1 dev eth2 || true
```

```
# Set DNS server
cat > /etc/resolv.conf << EOF
nameserver 8.8.8.8
EOF</pre>
```

## 13.1.5 Docker server-gui custom WEB page

Step 1: Add the node to the topology and make sure the DHCP option is **disabled** under the edit node window Reference section 13.2 for the correct console type.

Step 2: On the left sidebar menu open Startup-config and use the example syntax below to set the ip and html page for your Docker node. Make sure you are using the exact syntax for your static IP setup and custom HTML values:

```
# Set ip address and Default route

Step 3: Press the Save button below and switch the node to boot from the startup-config.

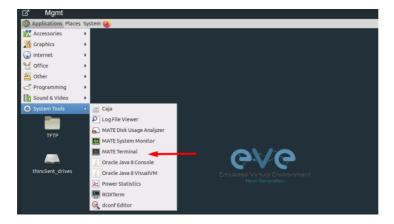

# 13.1.6 Docker server-gui SSL WEB page

Following previous chapter, you can enable on the server-gui node SSL/HTTPS certificate.

Step 1: Open Applications/System Tools/MATE Terminal

```
openssl req -x509 -nodes -days 365 -newkey rsa:2048 -keyout
/etc/ssl/private/apache-selfsigned.key -out /etc/ssl/certs/apache-
selfsigned.crt
```

Step 3: Enable SSL certificate for web page.

```
/usr/sbin/a2enmod ssl
```

/usr/sbin/a2ensite default-ssl

#### Step 4: Restart apache2 service

sv stop apache2

sv start apache2

# 13.1.7 Docker server-gui SSH root access activation

Step 1. Use Mgmt\_Server MATE Terminal, type:

vi /etc/ssh/sshd config

Step 2. Navigate and find PermitRootLogin and uncomment. (delete #). Locate cursor under # sign and press "x". Then press ESC and type: ":wq", Enter

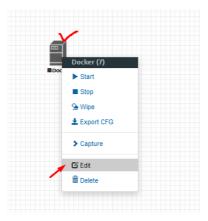

```
#LoginGraceTime 2m
PermitRootLogin yes
#StrictModes yes
#MaxAuthTries 6
#MaxSessions 10
```

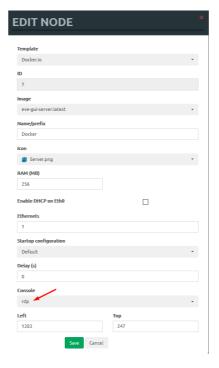

#### Step 3. Restart SSH service

/etc/init.d/ssh restart

# **13.2 Docker Consoles**

To set consoles for EVE Docker stations, right click on node and click Edit. Set the required console type

Docker Station	Console type
eve-gui-server (napalm, ansible)	RDP/Telnet
eve-chrome (optional)	RDP
eve-wireshark	RDP
eve-firefox	RDP
eve-ostinato (optional)	RDP

# 13.3 Docker cli root access

All EVE docker stations have the following configured CLI root account.

#### Username: root

#### Password: eve

**NOTE**: The root login for SSH can be commented in sshd file. Use vi to edit and remove comment "#" for PermitRootLogin

```
vi /etc/ssh/sshd_config
PermitRootLogin yes
```

Regular user (root user) SSH access to EVE Docker:

#### Username: nobody

Password: eve

# 13.4 Dockers re-install/update

To install or fix docker stations in the EVE Pro issue the following commands from the CLI of EVE.

When dockers are properly installed, your EVE CLI command dc images output must show:

root@eve-ng:~# do	: images			
REPOSITORY	TĀG	IMAGE ID	CREATED 50 GB	SIZE
eve-desktop	latest	ca1333621bd7	12 hours ago	3.65GB
eve-gui-server	latest	9db19c879a17	2 days ago USB 2.0	3.84GB
eve-firefox	latest	0266d108a1bb	7 weeks ago	2.12GB
eve-wireshark	latest	82a009773e89	17 weeks ago VM Mana	ger1956GBC
root@eve-ng:~#				

If you still see some docker line with <none>

root@eve-ng:~# dc ima REPOSITORY	ges TAG	IMAGE ID	CREATED	SIZE
<none></none>	<none></none>	cc286e6ac274	16 seconds ago	1.87GB
eve-qui-server	latest	f3aa6e0e9a56	3 minutes ago	3.04GB
eve-wireshark	latest	638ed7cf5b80	12 minutes ago	887MB
eve-firefox	latest	259293d73b07	13 minutes ago	1.49GB
eve-desktop	latest	78e9c2e618a5	15 minutes ago	2.79GB

please use reinstall dockers command:

```
apt install --reinstall eve-ng-dockers
```

Reference for Dockers reinstall and upgrade: <u>http://www.eve-ng.net/documentation/eve-ng-upgrade</u>

# 13.5 Extra docker packages

NOTE: Not included in the default EVE Pro installation. This can take some time depending on your Internet connection and disk speed.

Chromium Linux http, to install issue CLI command:

```
apt update
apt install eve-ng-chrome
```

Ostinato docker, to install issue CLI command:

```
apt update
apt install eve-ng-ostinato
```

Docker-in-docker (DinD) docker. This docker is dedicated for complex docker stacks. Refer section: 13.6.2. To install issue CLI command:

```
apt update
apt install eve-ng-dind
```

To verify Installed dockers, issue CLI command

dc images				
root@eve-ng:~#	dc images			
REPOSITORY	TAG	IMAGE ID	CREATED	SIZE
eve-dind	latest	6e067b53b145	3 days ago	747MB
eve-gui-server	latest	0c764bb836f9	2 months ago	3.69GB

dockergui-rdp	latest	be03f3b46439	4 months ago	1.29GB
root@eve-ng:~#				

# **13.6 Third parties dockers**

Starting EVE-NG Pro version 2.0.6-52, the third party dockers can be installed on the EVE. However, some limitation still exists. You are free to evaluate by yourself if a specific one is working.

Two main categories of dockers require each a specific method for EVE integration:

Simple Docker

Docker's Stack

#### 13.6.1 Simple docker installation

Simple docker is the classic docker running in a standalone mode. You could find large choice of docker images on https://hub.docker.com or create the Docker by yourself.

Complete guide about dockers can be found on https://docs.docker.com/

Note: Internet access is a must. For simple docker, you only have to use:

dc pull <dockername>

Note: "dc" is EVE-NG alias for docker -H tcp://127.0.0.1:4243 which simplify docker operations in the EVE.

Once your new docker is pulled, you are able to use it in EVE-NG topologies. EVE-NG will start it using correct parameters automatically.

Example: SSH to your EVE. Install adosztal AAA docker:

root@eve-v6-maste	er:~# <b>dc p</b>	ull adosztal/aa	a	
root@eve-v6-maste	er:~# <b>dc i</b>	mages		
REPOSITORY	TAG	IMAGE ID	CREATED	SIZE
registry	2	9363667f8aec	4 weeks ago	25.4MB
eve-ostinato	latest	5e74596c24b0	5 weeks ago	4.22GB
eve-gui-server	latest	d819486ab729	5 weeks ago	7.07GB
eve-desktop	latest	aaab99abf9b9	5 weeks ago	6.88GB
eve-firefox	latest	01c3151ae759	5 weeks ago	4.69GB
eve-wireshark	latest	030d66992f3d	7 weeks ago	4.24GB
adosztal/aaa	latest	6e12e4096083	3 years ago	314MB
root@eve-v6-maste	er:~#			

New docker use: Open a new lab, add docker and select adosztal/aaa with console in tenet mode.

ADD A NEW	/ NODE
Template Docker.io	Show unprovisioned templates
Number of nodes to add	Image Adosztal/aaa:latest
Name/prefix Docker	
Icon  Server.png	•
<b>CPU</b>	RAM (MB) 1024
Enable DHCP on Eth0	
1 Startup configuration	
None	•
<b>Delay (s)</b> 0	
Console telnet	•

## 13.6.2 Docker stack installation

Docker's Stack is a complex structure of multi intercommunicating dockers. For example, a Web service docker is using another Database Docker service.

To avoid involve EVE host internal process and network, the new add-on docker is provided: "eve-dind". This add-on is a dedicated docker container allowing to build complex stack. The classic method is based on docker-compose.

The example below illustrates how to build complex docker LibreNMS, Network Management System.

Note: Internet access is a must. SSH to your EVE as root.

Sample: Step 1: On eve cli, type:

apt update apt install eve-ng-dind

Note: install eve-ng-dind add-on docker and is required only once.

Step 2: Create a new lab

Step 3: Add on the lab:

- a. NAT network
- b. Docker eve-dind (set console to 'telnet' and enable dhcp)

Step 4: Connect docker to NAT network

Step 5: Start Docker

Step 6: Open Docker Console

Step 7: Type in console:

git clone https://github.com/librenms/docker.git librenms-src

cp -r librenms-src/examples/compose librenms

rm -fr librenms-src

cd librenms

docker-compose up -d

Commit your created docker with new name.

Step 8: Open a cli access to your EVE server

Step 9: Type within the EVE cli: Find your current running container ID using eve-dind image

dc ps -a

root@eve-ng:~#	de ps -a			
CONTAINER ID	IMAGE	COMMAND9: Type within t	CREATED	STATUS
PORTS	NAMES			
b96743436dd8	eve-dind:latest	"dockerd-entrypoint.…"	About a minute ag	go Up About a minute
	9a4f9db1-4ab2-46	e8c-b066-0d25ceeb540b-10-4		
7d83609410aa	eve-gui-server:lates	st "2sbin2my2init"-> TINC	10 hours ago [ []	IN Upcion hours rusing eve
	9a4f9db1-4ab2-4e8	-b066-0d25ceeb540b-10-2		
13ee6dc804ae	eve-qui-server:lates	st "/sbin/my_init"	8 days ago	Exited (0) 16 hours ago
	dd700ee7-f03b-4fd5	5-8ed8-40d1ad2e6f4f-10-14		

Step 10: *IMPORTANT:* On the Lab UI stop docker. Do not wipe, but stop. Step 11: Commit your created docker with custom name.

dc commit <containerid> eve-librenms

Step 12: On LAB UI: Stop all nodes, Close Lab, Delete Lab

Note, when you add newly created docker in lab, use vendor advised settings, x4 CPU and 8GB Ram for librenms docker. Console: Telnet. Graphic Interface https.

# 13.7 Customize docker image with your own changes.

Step 1. Connect your existing docker node to the internet

Sometimes you may have your own packages to be installed on the docker and kept for future labs. For this connect your docker to the Internet. It can be achieved connecting docker to Management Cloud0 or NAT cloud. **Example below**, Sever-gui docker is connected to Cloud NAT.

		WORK
<b>a</b>	ID	2
-otto	Name/Prefix	NAT
× ×	Type	NAT
⊠* Docker	Left	462
Applications Places System     for root@Docker: -	Тор	219
E: Unable to locate package geniso root@pocker:-# Building dependency tree Reading state information Done Building dependency tree Reading state information Done Suggested packages: The following NED packages will be installed: genisoinage 0 uggraded, 1 newly installed, 0 to remove and 81 not uggraded. Need to get 316 80 af archives. After this operation, 1,598 kB of additional disk space will be used. After this operation, 1,598 kB of additional disk space will be used. After this operation, 1,598 kB of additional disk space will be used. After this operation, 1,598 kB of additional disk space will be used. Fiched 316 kB in 68 (1,66 kB/s) Selecting previously unselected package genisoinage. Step 2. Make your installs, packages. Example:

In the screen above I did install genisoimage package

```
apt install genisoimage
```

Step 3. Obtain your RUNNING docker container ID:

From EVE CLI issue command:

dc ps

Step 4. Commit your prepared docker image with new name. example below I called it evegeniso

dc container commit <containerid> <newimagename>

dc container commit 0d4b3f8c314c eve-geniso

Step 5 check if new Docker image is created

dc images

root@eve-ng:~# dc	images			
REPOSITORY	TĀG	IMAGE ID	CREATED	SIZE
eve-geniso	latest	e6dd56c3b26c	4 seconds ago	3.19GB
eve-kali 🥆	latest	d1fda568e8a0	3 weeks ago	4.77GB
eve-nso	latest	f2a7a3d6a423	8 weeks ago	3.95GB
eve-ostinato	latest	e89cad6b1813	2 months ago	1.34GB
eve-gui-server	latest	a13cb401c8dd	3 months ago	3.11GB
eve-firefox	latest	8900664e9f3b	4 months ago	1.49GB
eve-chrome	latest	51fd92216b99	4 months ago	1.61GB
eve-wireshark	latest	0c49fe2dc6bb	7 months ago	888MB
eve-desktop	latest	c285d1ec833c	7 months ago	2.39GB
dockergui-rdp	latest	a65b62fa69b6	9 months ago	553MB
phusion/baseimage	0.9.22	877509368a8d	2 years ago	225MB
root@eve-ng:~#				

Step 6. Optional, If you want to keep this image and later load in other EVE installs, then you must create exportable .tar image.

dc image save -o /root/mysuperimage.tar <image name>

Step 7 Optional, upload your .tar file in new EVE root, and install it in Dockers location.

dc image load -i /root/mysuperimage.tar

### **13.8Custom docker name tags**

For different docker containers you may need to set different rights for your custom docker development. EVE-NG Supports 3 levels of dockers' privileges. To achieve it, rename your deployed docker image.

Standard Docker Name Tag:

dc tag <yourdockername>:latest <yourdockername>:latest

#### Privileged Docker Tag:

or

dc tag <yourdockername>:latest <yourdockername>:privileged

dc tag <yourdockername>:latest <yourdockername>-privileged:latest

#### DinD Docker Name Tag:

dc tag <yourdockername>:latest <yourdockername-dind:latest</pre>

Example to create gui-server docker in privileged mode:

dc tag eve-gui-server:latest eve-gui-server-privileged:latest

### 13.9 Delete docker image from EVE

Step 1. From EVE CLI issue command to check docker ID to be removed.

dc images

root@eve-ng:~# do	: images			
REPOSITORY	TÃG	IMAGE ID	CREATED	SIZE
eve-geniso	latest	e6dd56c3b26c	4 seconds ago	3.19GB
eve-kali	latest	d1fda568e8a0	3 weeksEago <sup>T</sup> GF	professio4al7.7GBb
eve-nso	latest	f2a7a3d6a423	8 weeks ago	3/95GB
eve-ostinato	latest	e89cad6b1813	2 months ago	1.34GB
eve-gui-server	latest	al3cb401c8dd	3 months ago	3.11GB
eve-firefox	latest	8900664e9f3b	4 months ago	1.49GB

Step 2. Use command: dc rmi -f <id of docker image>.

dc rmi -f e6dd56c3b26c

Step 3. Check with dc images if docker is removed.

Step 4. Finish removal with apt remove --purge eve-ng-chrome, where eve-ng-chrome is your docker repository name.

# 14 EVE Cluster System

The EVE-NG cluster refers to a group of EVE-NG nodes working together as a single entity to provide users with better scalability and availability.

The EVE-NG cluster model is designed to work as a one + many systems, the EVE-NG management server is acting as "Master" node, EVE-NG installations as "Satellite" can be members of this cluster.

One "Master" EVE-NG can have several satellites joined into its cluster but each satellite can only be joined to one Cluster/Master.

Any existing EVE-NG Pro installation is already a EVE-NG "Master", cluster members will need to be installed as "satellite" and can then easily be joined.

## **14.1 EVE Cluster Licensing**

EVE-NG Cluster system only the Master node is required to have a license. It is classic EVE Professional or LC/Corporate license.

Satellite nodes has special light EVE-NG Agent installation described below in Chapters: 14.5, 14.6 and 14.7. The Satellite nodes need not special EVE-NG License

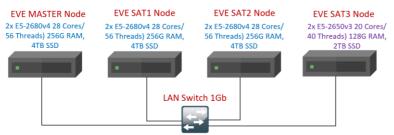

One "Master" EVE-NG can have several satellites joined into its cluster but each satellite can only be joined to one Cluster/Master.

## 14.2 EVE Cluster design models

#### 14.2.1 Bare metal servers cluster

#### Design 1 EVE-NG Cluster Bare HW servers, recommended

EVE Cluster 208 vCPU, 896GB RAM, 16TB SSD. Cluster members can be different HW configuration. The 1GB LAN connection or better is required

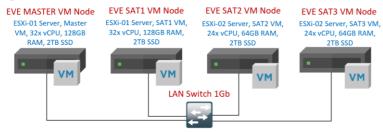

### 14.2.2 ESXi Virtual Machines cluster

#### Design 2 EVE-NG Cluster VM Ware ESXi Virtual Machines

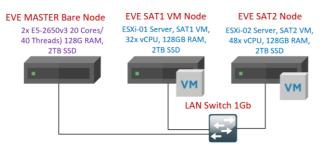

EVE Virtual ESXi Cluster 112 vCPU, 384GB RAM, 8TB SSD. Cluster members can be different VM configuration and located on same or different ESXi servers

### 14.2.3 Hybrid cluster

#### Design 3 Hybrid EVE-NG Cluster Bare metal and VM Ware ESXi Virtual Machines

EVE Hybrid Bare HW and ESXi Cluster 120 vCPU, 384GB RAM, 6TB SSD. Cluster members can be different VM configuration and located on same or different ESXi servers

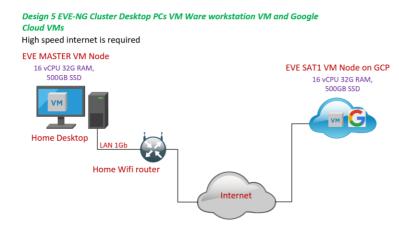

### 14.2.4 VM Ware workstation light cluster

### 14.2.5 Google Cloud cluster

NOTE: Your EVE Master must have Public IP address to join GCP satellite

# 14.3 EVE Cluster pre-requisites

1431	Firewall	rules	between	Master	and	Satellite I	nodes
17.3.1	I II C Wall	i uico	Derween	Master	and	Satemite	loues

Node	Protocol	Port	Direction	Source	Destination
MASTER	ТСР	22	ingress and egress	MASTER node IP	SATELLITE nodes IPs
MASTER	UDP	60569	ingress and egress	MASTER node IP	SATELLITE nodes IPs
SATELLITE	ТСР	22	ingress and egress	SATELLITE node IP	MASTER Node IP
SATELLITE	UDP	60569	ingress and egress	SATELLITE node IP	MASTER Node IP

### 14.3.2 EVE Cluster interface MTU settings

**IMPORTANT:** The management interface MTU for all EVE-NG Cluster members MUST have the same value. The default ethernet MTU value is 1500.

14.3.3 EVE Cluster internal management network

An EVE Cluster for internal management is using network 172.29.130.0/24. Please avoid use it in your network.

### 14.3.4 EVE Cluster Member's hardware requirements

Any suitable Hardware or virtual device. Please refer Chapter 2

### 14.3.5 NTP Synchronization requirements

It is mandatory that during install your cluster Satellite member have same time NTP synchronization as the Master server.

### **14.4 EVE Cluster MASTER Node Installation**

- Mandatory Prerequisites: Internet must be reachable and DNS must resolve from your EVE Server. EVE ISO installation requires internet access and DNS to get updates and install the latest EVE-PRO version from the EVE-NG repository, to check it, do a named ping, for example ping www.google.com
- ▲ It is mandatory that during install your cluster Satellite member have same time NTP synchronization as the Master server.

Any existing EVE-NG Pro installation is already a EVE-NG "Master", cluster members will need to be installed as "Satellite" and then can be easily joined. Please refer Chapter 3

## 14.5 ESXi EVE Satellite VM installation

Download EVE-NG Professional Full ISO distribution image: <u>https://www.eve-ng.net/index.php/download/</u>

IMPORTANT NOTE: If your Network interfaces order has been changed, please follow instruction to section 16.6

# 14.7 Google Cloud EVE Satellite installation

Pre-Requisites: Your EVE Master server must have Public IP address or static NAT to public IP to join GCP satellite.

### 14.7.1 Preparing Ubuntu boot disk template

Step 1: Open the google cloud shell and press: "START CLOUD SHELL"

Compute Engine	VM instances	MPORT VM CREFRESH		
Marketplace	INSTANCES OBSERVABILITY INSTANCE	SCHEDULES		
Release notes	VM instances			
CLOUD SHELL Terminal (eve-tes	st-276509) × + •	_	🖍 Open editor 🔤 🔅	○ ☑ >

Step 2: Create a nested Ubuntu 22.04 image. Copy and paste the below command into the shell. Use copy/paste. crtl +c/ctrl +v. **It is single line command**. Confirm with "enter":

14.7.2 Network MTU settings and firewall rules for GCP

NOTE: GCP VM by default has MTU 1460 set for the interfaces by default. You may require to set VM machine custom MTU (1500) which is commonly known default setting for ethernet. The MTU settings on the GCP interface must be adjusted if you want it to use as the part of EVE-NG cluster system.

Open the google cloud shell and press: "START CLOUD SHELL"

Copy the following commands in SHELL Cloud console:

###### Create 1500 MTU subnet #####
gcloud compute networks create mtu1500 --subnet-mode=auto --mtu=1500
--bgp-routing-mode=regional
###### Create 1500 MTU firewall rules #####
gcloud compute firewall-rules create wireguard-in --direction=INGRESS
--priority=1000 --network=mtu1500 --action=ALLOW --rules=udp:60569 -source-ranges=0.0.0.0/0

gcloud compute firewall-rules create wireguard-out --direction=EGRESS --priority=1000 --network=mtu1500 --action=ALLOW --rules=udp:60569 -destination-ranges=0.0.0.0/0 gcloud compute firewall-rules create ssh-in --direction=INGRESS --

```
priority=1000 --network=mtu1500 --action=ALLOW --rules=tcp:22 --
source-ranges=0.0.0.0/0
```

```
gcloud compute firewall-rules create ssh-out --direction=EGRESS --
priority=1000 --network=mtu1500 --action=ALLOW --rules=tcp:22 -
destination-ranges=0.0.0.0/0
```

#### Firewall rules summary:

Name	Туре	Targets	Filters	Protocols/ports	Action	Priority	Network 个	Logs
ssh-out	Egress	Apply to all	IP	tcp:22	Allow	1000	mtu1500	Off
<u>wireguard-</u> out	Egress	Apply to all	IP	udp:60569	Allow	1000	<u>mtu1500</u>	Off
ssh-in	Ingress	Apply to all	IP	tcp:22	Allow	1000	mtu1500	Off
<u>wireguard-</u> in	Ingress	Apply to all	IP	udp:60569	Allow	1000	<u>mtu1500</u>	Off

14.7.3 Optional: GCP MTU 1500 Firewall rules for native console use

NOTE: If your Master EVE-NG server is installed on the GCP, then, you might need to allow incoming TCP connection for native console use.

Open the google cloud shell and press: "START CLOUD SHELL"

Copy the following commands in SHELL Cloud console:

```
###### Create MTU 1500 firewall rules for native console use #####
gcloud compute firewall-rules create allow-all-in --direction=INGRESS
--priority=1000 --network=mtu1500 --action=ALLOW --rules=tcp:0-65535
--source-ranges=0.0.0.0/0
```

```
gcloud compute firewall-rules create allow-all-out --direction=EGRESS
--priority=1000 --network=mtu1500 --action=ALLOW --rules=tcp:0-65535
--destination-ranges=0.0.0.0/0
```

#### Summary FW rules.

Name	Туре	Targets	Filters	Protocols/ports	Action	Priority	Network 个	Logs
allow-all- out	Egress	Apply to all	IP	tcp:0-65535	Allow	1000	<u>mtu1500</u>	Off
allow-all- in	Ingress	Apply to all	IP	tcp:0-65535	Allow	1000	mtu1500	Off

### 14.7.4 Creating VM

Step 1: Navigate: Navigation Menu/Compute Engine/VM Instances and press "CREATE INSTANCE"

Step 8: Allow https traffic.

#### Identity and API access @

Service accounts ?	
Compute Engine default service account	•
Requires the Service Account User role (roles/iam.serviceAccountUser) to be set if who want to access VMs with this service account. Learn more	for users
Access scopes 😧	
Allow default access	
Allow full access to all Cloud APIs	
O Set access for each API	
Firewall 🛛	
Add tags and firewall rules to allow specific network traffic from the Internet	

Allow HTTPS traffic

Step 9: Select Advanced Options. Expand Networking/Network Interfaces Edit network interface and select previously created network: mtu1500 Create VM.

Network interfaces

Network interface is permanent

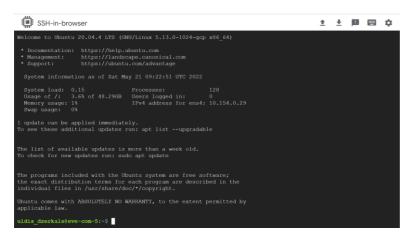

Edit network interface	<b>i</b> ^
Metwork *	- Q
Subnetwork *	

### 14.7.5 EVE-NG Satellite installation

Step 1: Click VM Instances to get access SSH to your VM, Connect to the VM with the first option "Open in browser window"

Step 2: Launch installation with:

Type the below command to become root: sudo -i

Start EVE-PRO installation

```
wget -0 - https://www.eve-ng.net/jammy/install-eve-agent.sh | bash -i
```

Step 3: Update and upgrade your new EVE-Pro apt update

apt upgrade **Confirm with Y** 

Step 4. Reboot EVE. Allow some time for reboot and then press "Reconnect"

### Step 5: IMPORTANT: Setup IP

Once the IP wizard screen appears, press ctrl +c and type the below command to become root: sudo -i

	Root         Password         k           Type the Root         X         1           10002000000000000000000000000000000000
eveproscyêeve-pros-8 sudo =1	

Now follow the IP setup wizard. **IMPORTANT**: set IP as **DHCP**!

Step 6: Reboot

### 14.7.6 GCP Firewall rules for Cluster

If your EVE-NG Master server is behind the firewall, make sure it has allowed access to the GCP VM with following firewall rules

Node	Protocol Port Direction		Direction	Source	Destination
MASTER	ТСР	22	ingress and egress	MASTER node IP	SATELLITE node IPs
MASTER	UDP	60569	ingress and egress	MASTER node IP	SATELLITE node IPs

## 14.8 Cluster Management

14.8.1 Join Satellite nodes to the Master

Step 1: Make sure that you have reachability between Master and Satellite nodes and firewall rules are configured in your network if FW is set between them. Firewall rules Section 14.3.1

Constant Vy Tout Environment		🕷 Main	🗲 Management 👻	🗐 System 🛨	i Information -	i Licensing 🗸	©2021 Eve-NG
击 File manager	Current po	sition / root		警 System S	-	-	
New Name				<ul> <li>Gystem st</li> <li>Gystem lo</li> </ul>	Add fo	der	
- <b>-</b> >	: 🕆 🗄	± 🛡 ;	3	🗙 Stop All N	odes		

### Step 2: Press Add Member

Cluster managemen	it here you can manage EVE	-NG Cluster							🗰 🗁 🗡 System 🗆	- Mustermanagemer
Cluster members										+Add member
Id Name	CPUs	CPU Usage (%)	Memory (GB)	Memory Usage (%)	Swap (GB)	Swap Usage (%)	Disk Size (GB)	Disk usage	Action

2	sat2 •	32		63		1		308	11	8 0 C	
											>

### 14.8.2 Remove Satellite nodes from the Master

Step 1: Navigate: System/Cluster Management

Cluster manageme	ent here you can manage EVE-	-NG Cluster							# - ÆSystem	- MCluster man agemen
Cluster members										(Add member
Id Name	CPUs	CPU Usage (%)	Memory (GB)	Memory Usage (%)	Swap (GB)	Swap Usage (%)	Disk Size (GB)	Disk usage	Action	
o master •	48		157	4	1		1689	56		^
1 sat1.	32	8	63		1		308	16	8 0 C	
2 sat2.	32		63		1		308		800	$\checkmark$
<									Remove memb	>

14.8.3 Re-join Satellite nodes from the Master

Step 1: Navigate: System/Cluster Management

Step 2: Press Remove Member

uster managem	ent here you can manage EVE-	NG Cluster							n → 🗲 System →	₩Cluster man z
Cluster members										(Add member
Id Name	CPUs	CPU Usage (%)	Memory (GB)	Memory Usage (%)	Swap (GB)	Swap Usage (%)	Disk Size (GB)	Disk usage	Action	
o master •	48		157				1689	55		
1 sat1.	32	8	63		1		308	18	8 0 C	
2 sat2•	32		63		1		308	11	8 0 C	
¢									Remove membe	× >

Step 3: Go to Satellite node CLI and reset IP address. It is necessary to refresh SSH key for re-join Satellite to the Master.

CLI: Login as root to the Satellite node and type:

```
rm -fr /etc/wireguard/*
rm -f /opt/unetlab/go/eve-agent.yaml
ip link set wg0 down
ip link del wg0
rm -f /root/.ssh/authorized_keys
```

Step 4: Join Satellite accordingly Section 14.8.1

14.8.4 Change Satellite IP address

Step1: Remove satellite from cluster system accordingly chapter 14.8.2

Step 2: Login as root to the Satellite node and type:

```
rm -f /opt/ovf/.configured
su -
```

EVE Satellite will initiate IP setup wizard. Follow Section 3.5.1

14.9 Cluster assignment hierarchy

14.9.1 Single Satellite server assignment

The Cluster Hierarchy depends which of the option is assigned:

Option 1 - User assignment to cluster Option 2 - Lab assignment Option 3 - Individual node assignment

	Cluster assignment Options	Description	Conditions
Option 1	EVE WEB GUI Management/User Management/Edit User/Satellite	Admin, Editor or User is forced to use only Cluster Satellite assigned by Admin. User cannot edit Lab or set individual nodes for other cluster Satellites. This Option can be assigned or edited only by Admin	If User account is set to use specific Satellite server, Users can NOT apply Options 2 and 3. This option applies to Admin user as well until Admin user will set his account to use "any"
Option 2	Lab is set to use Specific Cluster Satellite. Select Lab you want Edit/Select Satellite	If Option 1 is set to "any", then Admin or Editor is allowed to set Lab settings globally to use Lab on specific Cluster Satellite	Admin or Editor user accounts Satellite assignment (option 1) must be set to "any"
Option 3	Set lab nodes individually run-on specific Cluster server	Admin or Editor can assign single Lab nodes run on specific Cluster Satellite servers	Options 1 and 2 must be set to "any"

Lab User is not allowed to use any of options above

### 14.9.1.1 User assignment to the dedicated Satellite (Option 1)

#### Step 1: Navigate to Management/User Management

chris	internal	chris@eve.test	Chris	editor	any	0 GB			Unlimited	Unlimited	1	Car Edit @ Kick 8

Step 3: Choose the Satellite to be assigned for this user.

Satellites assignment per user (Editor or User) require Administrator account

The User Cluster Server value "any" is set by default.

Set the Cluster Satellites for the Lab Editor. This applies for Lab Editor roles. Lab Editor will stick to selected Satellites. Lab Editor will be forced and allowed to use only selected Satellite server or choose between the Satellite servers if it is assigned more than one server. If the Lab has set to use any satellite server, then Lab Editor will be assigned to use lowest satellite ID.

Example: Lab Editor has assigned to use SAT1 (ID1) and SAT2 (ID2). The Lab has set to use "any" satellite. This Editor lab will be automatically assigned to use first available Satellite with lowest ID1, SAT1.

Editor has rights to change Satellite per node for own created Labs.

Editor cannot change satellite assignments for Shared Lab. The Shared Lab is recommended to set "any" Cluster Satellite,

If the Lab is created on the Satellite servers which are NOT in the Lab Editor allowed Satellites list, this lab will not start.

Example: Lab is created to use Master server only, but Lab Editor is allowed to use only SAT1 Server. Lab Editor will not be allowed to start this Lab.

If the Lab contains nodes which are assigned to run on the Satellite server which is NOT in Lab Editor allowed Satellites list, this node will not start.

Example: Lab several nodes are assigned to use Master server only, but Lab Editor is allowed to use only SAT1 Server. Lab Editor will not be allowed to start these nodes.

Set the Cluster Satellites for the Lab User. This applies for Lab User roles. Lab User will stick to selected Satellites. Lab User will be forced and allowed to use only selected Satellite server or servers.

Example: Lab User has assigned to use SAT1 (ID1) and SAT2 (ID2). The Lab has set to use "any" satellite. This Lab User lab will be automatically assigned to use first available Satellite with lowest ID1, SAT1.

If the Lab is created on the Satellite servers which are NOT in the Lab User allowed Satellites list, this lab will not start.

Example: Lab is created to use Master server only, but Lab User is allowed to use only SAT1 Server. Lab User will not be allowed to start this Lab.

If the Lab contains nodes which are assigned to run on the Satellite server which is NOT in Lab User allowed Satellites list, this node will not start.

Example: Lab several nodes are assigned to use Master server only, but Lab User is allowed to use only SAT1 Server. Lab User will not be allowed to start these nodes.

#### Satellites

#### Option to assign cluster nodes for single lab devices.

Lab Side bar/Nodes, column SATELLITE, Select your cluster satellites for devices in the lab.

### 14.9.3 Master images synchronization with Satellites

Once you have assigned certain lab device to use cluster Satellite node and start it, the automatic rsync process is initiated from Master node copy necessary image to the Satellite cluster member. During rsync process between Master and Satellite lab device will display "Clock" sign beside device. After image rsync process is completed, Lab device will turn sign to "Play", running state.

Large size lab devices/images, rsync process can take some time. It depends of the network speed between the cluster members.

Once the image is copied into Satellite node, lab device will start immediately. RSYNC process initiates only once if particular device image does not exist on Satellite node.

### 14.10Cluster system monitoring

### 14.10.1 Cluster Monitoring page

#### Navigate: System/Cluster Management

Information columns displaying live information about cluster members utilization Satellite nodes have option to reboot or shutdown.

If the cluster is healthy and fully functional, the Status column will display "GREEN" dot beside the cluster members.

### 14.10.2 Satellite disaster recovery

Use case: If a satellite node crashed, was powered off while lab devices were running on it or the connection to the satellite was lost, the Master node will still have these nodes in a running state even if this is no longer the case.

To remediate this situation, you have to purge the local state information about the satellite before recovering the satellite, booting it back up or recovering the connection.

#### Step 1: To verify status of lab nodes:

Navigate Management/Nodes management. If you observing that crashed Satellite nodes are still alive and visible follow Step 2

Running node	(s)									
Labname	Lab ID	Username	Sat	Node Name	CPU usage (%)	RAM usage (%)	Disk usage (GB) 🛛 👋	Template	Action

### 14.10.4 Cluster monitoring cli commands

On EVE Master: Cluster System CLI Commands:

SSH to the Satellite node from the Master status: ssh 172.29.130.<satId>

```
#####Example SSH to SAT1#####
root@eve-ng:~# ssh 172.29.130.1
Welcome to Ubuntu 22.04.5 LTS (GNU/Linux 4.20.17-eve-ng-uksm-wg+
x86_64)
* Documentation: https://help.ubuntu.com
* Management: https://landscape.canonical.com
* Support: https://ubuntu.com/advantage
* Canonical Livepatch is available for installation.
- Reduce system reboots and improve kernel security. Activate at:
https://ubuntu.com/livepatch
Last login: Sun Jan 31 22:24:06 2021 from 10.6.6.14
root
root@eve-sat1:~#
```

#### Check Cluster Satellite version:

root@eve-sat03:~# dpkg -l eve-agent
Desired=Unknown/Install/Remove/Purge/Hold

## 14.11 Cluster system upgrade

Pre-requisites: The Master node must reach internet and resolve DNS.

On the EVE Master CLI run commands:

apt update apt upgrade

The cluster Satellites will upgrade automatically with EVE master. There no need any extra upgrade run for Satellite nodes.

To update manually Satellite nodes from Master EVE:

root@eve-ng:~# unl\_wrapper -a updatesat

Feb 01 00:03:24 Feb 01 00:03:24 Online Check state: Valid
Feb 01 00:03:24 update sat 1
ii eve-agent 6.0.1-XX amd64 Agent for EVE-NG Sat
Cluster member
Feb 01 00:03:24 update sat 2
ii eve-agent 6.0.1-XX amd64 Agent for EVE-NG Sat
Cluster member
root@eve-ng:~#

## 15.2 Correct EVE server network interfaces order

NOTE: Sometimes after installation the Ubuntu or ESXi (known reported issue), your system can change network interfaces (NICs) order.

EVE-NG, starting from version PE 5.0.1-77 has implemented NIC order script to fix your network interfaces order.

- 1. Log into your EVE as SSH, or native VNC server console as root user.
- 2. Navigate to cd /opt/ovf/
- 3. Run the script:

```
root@eve-ng-master:~# cd /opt/ovf/
root@eve-ng-master:/opt/ovf# ./nicorder-wizard
```

4. Follow the instructions on the screen to re-order your interfaces.

Reorder Nic	cs can change network
*********	₩
UP/DOWN	Select interface
LEFT/RIGHT	Move interface
ESC	Discard change
ENTER	Accept new order
C	
enx000c29	967dbcb eth0 -> eth0 967dbd5 eth1 -> eth1 967dbdf eth2 -> eth2 967dbe9 eth3 -> eth3

- 5. After correction the initial boot order will be saved on your EVE server
- 6. Reboot your EVE server, the new order settings will be in force now.

NOTE: if you will run order script again, it will show you last saved order.

## 15.3 Expand EVEs System HDD

IMPORTANT NOTE: DO NOT expand your current/existing HDD on your EVE VM!

### 15.3.1 HDD space alert

**Important:** by default, EVE will trigger alerts if there are 3GB or less HDD space available. Additional nodes will not start until more space is added or freed up. A link is provided in the notification bubble on how to properly add an additional HDD.

To edit HDD space threshold for the alert is customizable. please follow section: 7.4.1

Radius Server #1	IP	Port	Secret
	0.0.0.0	1812	******
idius Server #2	IP	Port	Secret
	0.0.0.0	1812	******
	0.0.0.0	8080	
mplate visibility	unprovisioned images Disable	×	
sk critical size	Minimal free space (GB)		

### 15.3.2 Expand HDD on VMware Workstation

Expanding your EVEs system HDD is achieved by adding an additional HDD to your EVE VM.

Step 1: Stop all your labs and shutdown EVE.

Use EVE CLI command: shutdown -h now

Step 2: Go to edit VM settings and add a new Hard drive. Then click Next.

Step 3: Leave the recommended SCSI HDD option and then click Next

Step 4: Make sure you have selected the option "Create a new Virtual disk."

Step 5: Set your desirable HDD Size; example 200GB.

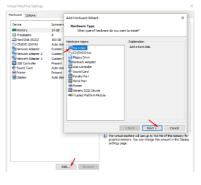

Step 6: Make sure you have set the option "Store Virtual disk as a single file" and then click Next

Step 7: Optional: Specify the location of where your new HDD will be stored, then click Finish.

Step 8: Boot your EVE VM, HDD size will be expanded automatically. To verify, use the command to verify HDD utilization referenced in section 15.1.6

15.3.3 Expand your HDD on ESXi

Expanding your EVEs system HDD is achieved by adding an additional HDD to your EVE VM.

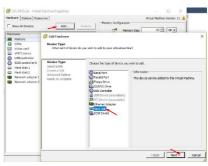

Step 1: Stop all your labs and shutdown EVE.

#### Use EVE CLI command: shutdown -h now

Step 2: Go to edit VM settings and add a new Hard drive. Then click Next

Step 3: Make sure you have selected the option "Create a new Virtual disk." Then click Next

Step 4: Set your desirable HDD Size; example 200GB.

Step 5: It is recommended to set the Thick Provision Lazy Zeroed HDD option.

Step 6: Specify the location of where your new HDD will be stored and then click Next

Step 7: Leave the recommended SCSI HDD option as is and click Finish.

Step 8: Boot your EVE VM, the HDD size will be expanded automatically. To verify, use the command to verify HDD utilization referenced in section 15.1.6

15.3.4 Expand your HDD on a Bare Metal EVE Server

It is a complicated process to expand a HDD for a bare metal EVE server.

<u>https://www.eve-ng.net/wp-content/uploads/2023/03/EVE-Doc-3023-LVM-HDD-systems.pdf</u> Please open a ticket in our Live chat support for advice.

https://webchat.eve-ng.net/login/

Use a google account to join in the Live Chat or create new chat account.

15.4 Reset Management IP

Type the following commands into the CLI followed by enter:

rm -f /opt/ovf/.configured

su -

http://www.eve-ng.net/documentation/installation/bare-installIP address setup wizard. Please follow the steps in section 3.5.1 for Static IP or 3.5.2 for DHCP IP setup.

### **15.5 EVE PRO SQL Database recovery**

Starting EVE PRO version 3.0.1-21 and later, you can recover SQL user database in case of disaster:

unl\_wrapper -a restoredb

Below is SINGLE LINE Command to restore SQL Database.

```
unl_wrapper -a restoredb ; grep -q default_time_zone
/etc/mysql/mysql.conf.d/mysqld.cnf || echo
"default_time_zone='+00:00'" >> /etc/mysql/mysql.conf.d/mysqld.cnf ;
systemctl restart mysql
```

# 15.6 EVE PRO Migration from host to host

Step 1: On newly installed EVE navigate to:

#### cd /opt/unetlab/scripts

Step 2: Run migration script migrate.sh where source IP is your old EVE host IP and root password of old EVE. [./migrate.sh -s <old eve ip> -p <root password>]

Example:

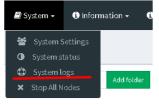

root@eve-ng:/opt/unetlab/scripts# ./migrate.sh -s 192.168.1.100 -p eve

Step 3: After migration is completed, deactivate EVE license on old host, and load license in the new EVE machine.

https://www.eve-ng.net/index.php/documentation/howtos/recover-rehosting-eve-ng/

# **15.7 EVE Log files**

EVE log Files can be obtained from the System Logs page under the System dropdown menu

Use the menu to collect log file data you are interested in.

System log viewer				
elect log file	Number of Lines	Search text		
access.bd	20			View
access.txt				
ipi.txt				
error.txt				
hp_errors.txt				
inl_wrapper.txt				
pulimit.log			Null	

## 15.8 EVE cli diagnostic info

Use EVE cli to obtain your EVE information:

eve-info

# **16 EVE Extras**

## **16.1 EVE Pro Radius server setup for user authentication**

**Mandatory Prerequisites:** Updated EVE-PRO version 2.0.6-30 or later.

Please follow	section: 7.4	.1
---------------	--------------	----

System settings			
Radius Server #1	IP	Port	Secret
	0.0.0.0	1812	*****
Radius Server #2	IP	Port	Secret
	0.0.0.0	1812	•••••

16.1.1 EVE User setup for Radius authentication

Step 1: Open the User management submenu. Management>User management and click Add user

Step 2: The Add New User management window will pop up. Fill in the main information about your EVE user. Make sure that you're the username of the account created in EVE matches with the Radius server database.

Step 3: Enable the External Auth (Radius) checkbox. Any existing password will be removed, because the authenticator will check with the Radius server for credentials.

Add New User
User Name*
test
Use only (A-Za-z0-9)dhars
External Auth ( Radius ) 🗹
Password
•••••
Password Confirmation
*****

Step 4: If you have purchased licenses for different EVE user roles, you can choose the preferred user role. For licensing and user roles please refer to section **4** 

ame					
John Tester					
Role Administrator 🗸	 _				
Administrator					
Accol Editor					
From User	0	to	-1	0	
POD*					
1					
1					

Step 5: Set the access date and time From - to. If the fields are left empty (untouched), your user will have no time restrictions for accessing the EVE Server. Account validity with time settings is available for Editor and User roles only.

Admin accounts have no time limit for account validity, and Account Validity time cannot be set.

rom	2018-05-18	00:00	to	2018-05-20	01:00
POD*					

Step 6: The POD number is a value assigned to user accounts automatically. POD numbers are like user profiles inside of EVE and are a unique value for every user Think of PODs like a virtual rack of equipment for each user. Admins can assign a preferred number between 1-128. Please keep POD numbers unique between users!

Step 7: Press ADD

Step 8. The username created inside EVE must match the username on the Radius server

Cancel

**Example:** EVE user authenticated with ISE 2.1 Radius server.

# 16.5 Windows node settings for Wifi dongle

Using a Wifi USB dongle, you can connect a WiFi-adapter to windows host inside EVE.

Step 1. Connect your USB Wifi dongle to your EVE server.

Step 2. Issue the following command on the EVE CLI to obtain BUS and host numbers which your USB WiFi is connected to:

```
lsusb
```

telnet

_						
root@eve-ng:~#		lsusk	D			
Bus	002	Device	002:	ID	0cf3:9271	Atheros Communications, Inc. AR9271 802.11n
Bus	002	Device	001:	ID	ld6b:0002	Linux Foundation 2.0 root hub
Bus	006	Device	001:	ID	ld6b:0001	Linux Foundation 1.1 root hub
Bus	005	Device	001:	ID	ld6b:0001	Linux Foundation 1.1 root hub
Bus	001	Device	003:	ID	0424:2514	Standard Microsystems Corp. USB 2.0 Hub
Bus	001	Device	001:	ID	ld6b:0002	Linux Foundation 2.0 root hub
Bus	004	Device	001:	ID	ld6b:0001	Linux Foundation 1.1 root hub
Bus	003	Device	002:	ID	04e6:5116	SCM Microsystems, Inc. SCR331-LC1 / SCR3310 Sma
rtCa	ard H	Reader				
Bus	003	Device	001:	ID	ld6b:0001	Linux Foundation 1.1 root hub
root	Geve	e-ng:~#				

Step 3. Add the windows node onto the topology and edit the Qemu line:

Change the type value: **type=q35** Add a comma and then the following line:

#### if=virtio -usb -device usb-host,hostbus=2,hostaddr=2

Where hostbus is your Bus value and hostaddr is your Device ID as seen in the figure above.

Full Windows host qemu line will look like this:

```
-machine type=q35,accel=kvm -cpu
host,+pcid,+kvm_pv_unhalt,+kvm_pv_eoi,hv_spinlocks=0x1fff,hv_vapic,hv
_time,hv_reset,hv_vpindex,hv_runtime,hv_relaxed,hv_synic,hv_stimer -
vga std -usbdevice tablet -boot order=cd -drive
file=/opt/qemu/share/qemu/virtio-win-
drivers.img,index=1,if=floppy,readonly,if=virtio -usb -device usb-
host,hostbus=2,hostaddr=2
```

# **16.6 Master Server NIC ports order change**

Some of the servers has Network interface cards with multi and various ethernet type ports. Example: Some DELL R series servers has first 2 Fibre ports (SFP) and additional 4 Ethernet ports. Requirement is to set EVE management on the 3<sup>rd</sup> port.

Supported starting from version 5.0.1-93.

#### Workaround:

- SSH or use serial console to your EVE CLI as root user.
- Navigate CLI to:
  - cd /opt/ovf/
- Run NIC order setup wizard

./nicorder-wizard

Follow the instructions on the screen to set primary NIC for your EVE

Reorder Nic *********				
UP/DOWN	Select :	interfa	ace	
LEFT/RIGHT	Move int	terfac		
ESC	Discard	change	e	
ENTER	Accept 1	new ord	der	
> enx000c29				
enx000c29	961748b •	ethl -:	> ethl	

# 16.7 Satellite Server NIC ports order change

Some of the servers has Network interface cards with multi and various ethernet type ports. Example: Some DELL R series servers has first 2 Fibre ports (SFP) and additional 4 Ethernet ports. Requirement is to set EVE management on the 3<sup>rd</sup> port.

#### Workaround:

- SSH or use serial console to your EVE CLI as root user.
- Execute link set up command for all interfaces

ls -1 /sys/class/net/ | while read i ; do ip link set \$i up ; done

Detect which interface is up state

ls -1 /sys/class/net/ | while read i ; do ip link set \$i up ; done

Edit netplan yaml file with correct interface name:

nano /etc/netplan/01-netcfg.yaml

```
GNU nano 4.8 /etc/netplan/01-netcfg.yaml

# This file describes the network interfaces available on your system

# For more information, see netplan(5).

network:

version: 2

renderer: networkd

ethernets:

ens160:  Workaround:

addresses: [ "192.168.98.101/24" ]

gateway4: 192.168.98.1

nameservers:

addresses: [ "8.8.8.8", "1.1.1.1" ]
```

- To save netplan settings use: CTRL +o [letter o]; Enter; CTRL +x [for exit]
- Run test the new network settings, enter

```
netplan try
```

```
root@eve-sat01:~# netplan try
Do you want to keep these settings?
Press ENTER before the timeout to accept the new configuration
Changes will revert in 112 seconds
Configuration accepted.
```

Apply new network settings and reboot

```
netplan apply
```

reboot

# 17 Images for EVE

Images must be uploaded and prepared before they can be used in labs. The best way to upload images is to use the WinSCP tool for Windows environment or FileZilla for MAC OSX and Linux.

Link to download WinSCP:

https://winscp.net/eng/download.php

Link to download FileZilla:

https://filezilla-project.org/

To access EVE, use SSH protocol (port 22).

Supported images for EVE are stored in the three locations:

- IOL (IOS on Linux), /opt/unetlab/addons/iol/bin/
- Dynamips images, /opt/unetlab/addons/dynamips
- Qemu images, /opt/unetlab/addons/qemu

## 17.1 Qemu image naming table

▲ IMPORTANT NOTE: Intel VT-X/EPT must be enabled to run Qemu nodes in EVE. For information on how to enable this option, Refer to section 3: EVE Installation.

The directory names used for QEMU images are very sensitive and must match the table below exactly in order to work.

Ensure your image folder name starts as per the table. After the "-" you can add whatever you like to label the image. We recommend using the version of your image.

Folder name examples:

firepower6-FTD-6.2.1 acs-5.8.1.4

The image hdd inside the folder must be named correctly: Example: hda.qcow2 or virtioa.qcow2

Full path Example: opt/unetlab/addons/qemu/acs-5.8.1.4/hda.qcow2 The table of proper folder names is provided in our website:

https://www.eve-ng.net/index.php/documentation/qemu-image-namings/

Supported HDD formats and Qemu versions for the EVE images:

HDD Format	HDD name example
lsi([a-z]+).qcow	lsia.qcow
hd([a-z]+).qcow	hda.qcow
virtide([a-z]+).qcow	virtidea.qcow

virtio([a-z]+).qcow	virtioa.qcow
scsi([a-z]+).qcow	scsia.qcow
sata([a-z]+).qcow	sataa.qcow

Supported Qemu Versions
1.3.1
2.0.2
2.2.0
2.4.0
2.5.0
2.6.2
2.12.0
3.1.0
4.1.0
5.2.0
6.0.0
7.2.9
8.2.1

# 17.2 How to prepare images for EVE

How to add EVE-NG images please refer to:

https://www.eve-ng.net/index.php/documentation/howtos/

# 17.3 How to add custom image template

## 17.3.1 Templates folder choice

▲ IMPORTANT NOTE: Starting from EVE-PRO Version 2.0.6-42, EVE installation is autodetecting what kind of CPU manufacturer has your server: Intel or AMD, to choose proper templates set. You can check it manually on EVE cli: example below, showing that EVE has Intel CPU.

```
root@eve-ng:~# lsmod | grep ^kvm_
kvm_intel 212992 74
root@eve-ng:~#
```

- If you have Intel CPU, then your template files are in "/opt/unetlab/html/templates/intel/"
- If you have AMD CPU, then your template files are in "/opt/unetlab/html/templates/amd/"

## 17.3.2 Prepare template file

**NOTE:** For templates development use templates folder which is matching your EVE server CPU.

Example below will be based for Intel CPU EVE custom image template. Use EVE cli or WinSCP/Filezilla to create template.

Step 1: Navigate to EVE location: /opt/unetlab/html/templates/intel/

Step 2: Choose your most suitable template from which you want to make copy and create own image template. (example: newimage.yml)

Step 3: Make a copy from source template newimage.yml. Example: Using CLI create template and name it ngips.yml.

cp /opt/unetlab/html/templates/intel/newimage.yml /opt/unetlab/html/templates/intel/ngips.yml

You can create new template using WinSCP or Filezilla as well.

ootgeve-ng.zopt	/unetlab/html/te	mplates/intel# ls_

17.3.3 Prepare interface format and name lines

EVE Pro has included option to create various interface names, sequences and numbering. Please refer table below.

Formula	Template example	line	format	Will produce
---------	---------------------	------	--------	-----------------

eth_format: <prefix>{<first example<br="" for="" slot:="" value="">1&gt;}<separator>{<first for="" port="" value="">-<number of<br="">port per slot: example 8&gt;}</number></first></separator></first></prefix>	eth_format: Gi{1}/{0-8}	Gi1/0 Gi1/1 Gi1/2 Gi1/3 Gi1/4 Gi1/5 Gi1/6 Gi1/7 Gi2/0 Gi2/1 
eth_format: <prefix>{<first example<br="" for="" slot:="" value="">0&gt;}<separator>{<first for="" port="" value="">-<number of<br="">port per slot: example 4&gt;}</number></first></separator></first></prefix>	eth_format: Ge{0}/{0-4}	Ge0/0 Ge0/1 Ge0/2 Ge0/3 Ge1/0 Ge1/2 Ge1/3 Ge2/0 Ge2/1 Ge2/2 
eth_format: <prefix>{<first value="">}</first></prefix>	eth_format: Gi{0}	Gi0 Gi1 Gi2 Gi3 
eth_format: <prefix>{<first value="">}</first></prefix>	eth_format: G0/{0}	G0/0 G0/1 G0/2 G0/3 
eth_name: <prefix: custom="" interface="" name=""></prefix:>	eth_name: - M1 - T1 - T2	M1 T1 T2
eth_name: <prefix: custom="" interface="" name=""></prefix:>	eth_name: - MGMT - DATA - TRAFFIC	MGMT DATA TRAFFIC

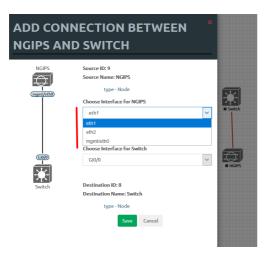

**Combined first named interface following by formatted interfaces Example:** We have to set first node interface name "eth0/mgmt" and next following interfaces must start from eth1 and change sequence accordingly. eth1, eth2,....,ethx

As your node first interface will be custom named (eth0/mgmt), therefore in the template "eth\_name:" must be added before "eth\_format:"

eth\_name:
- eth0/mgmt
eth format: eth{1}

This adding will produce Node interfaces.

## 17.3.4 Edit your new template file:

For edit newly created template you can use WinSCP, FileZilla or cli. Example below shows template edit using cli and *nano* editor

cd /opt/unetlab/html/templates/intel/
nano ngips.yml

Change content, setting for various images can vary depends of vendor requirements. The interface name lines please refer Section: 17.3.3

cpu: 4	Nothing selected					
ram: 8192	NGIPS					
ethernet: 3	Barraccuda NGIPS					
	Cisco FirePower NGIPS					

```
eth_name:
- eth0/mgmt
eth_format: eth{1}
console: vnc
shutdown: 1
gemu_arch: x86_64
gemu_version: 2.4.0
gemu_nic: e1000
gemu_options: -machine type=pc,accel=kvm -serial none -nographic -no-user-config
-nodefaults -display none -vga std -rtc base=utc -cpu host
...
```

**Note:** Qemu options in the line may vary per image requirements. Please check manufacturer advice how to run KVM image

17.3.5 Prepare new icon for your template:

**Step 1** Use Filezilla or Winscp to copy your custom icon IPS.png (icon filename IPS.png used in ngips.yml)

This icon should be about 30-60 x 30-60 in the png format (switch.png is for example 65 x 33, 8-bit/color RGBA)

Step 2 Copy this new icon into /opt/unetlab/html/images/icons/

17.3.6 Template use

Step 1 Create directory /opt/unetlab/addons/qemu/ngips-6.5.0-115

mkdir /opt/unetlab/addons/qemu/ngips-6.5.0-115

Step 2 Upload image NGIPS, Refer Section: 17.2

## 17.4 How to hide unused images in the node list

Please follow section 7.4.1 or 7.9.1.1

# **18 EVE Backup Solution**

EVE NG Software provides full and partial content backup Starting from: EVE Professional 5.0.1-131 with Cluster EVE Community 5.0.1-20 EVE Backup Solution supported transfer protocols: SFTP port 22 or FTP port 23.

EVE Backup solution requires to have an external SFTP/FTP server where the EVE-NG content will be stored. The SFTP/FTP server HDD size must be chosen appropriately.

## **18.1 Backup manager**

## **18.1.1 Backup Manager Installation**

Mandatory Prerequisites: The Internet must be reachable from your server. DNS names must be resolved. This Backup solution installation requires internet access to get updates and install the latest EVE-Professional or Community version from the EVE-NG repository.

SSH to your EVE as root user and execute following commands.

root@eve-ng:~# apt update
root@eve-ng:~# apt install eve-backup-manager
root@eve-ng:~# reboot

## 18.1.2 Setup external SFTP or FTP server

#### SFTP server setup is EVE user's responsibility and not covered under EVE-NG support.

In order to use the backup tool, you are required to set up an external SFTP/FTP server. This part is not supported by EVE-NG support, because every user can install and establish a server in its own way. The main pre-requisite is: The SFTP server must be reachable two ways from the EVE server and back from the SFTP server to EVE.

Examples of external SFTP server setup:

https://www.eve-ng.net/wp-content/uploads/2024/03/EVE-Doc-2024-External-SFTP-Server.pdf

**18.1.3 Backup Manager SFTP/FTP settings** 

IMPORTANT NOTE: It's a must to stop all running labs (nodes) before starting a backup process. If you have satellites, then make sure they are and connected to the Master. Satellites backup will be done automatically.

SSH to your EVE as root user and execute following command.

root@eve-ng:~# backup-manager

Backup Manager Main Menu	
(e) Edit Backup Server required to setup external SFTP/FTP server. This part is out of EVE-	
NC support because every user can install and establish its own way. The main pre-requisite (c) Create Backup is, the Start server must be fully reachable from EVE server and back from SFTP server to	
(r) Restore Backup	
(q). Quits of external SFTP server setup:	
Link to document	
SFTP server setup is EVE user responsibility and not covered under EVE-NG support.	
or in server setup is EVE user responsionly and not covered under EVE-ive support.	

#### Select option (e) Edit Backup Server

		Ĩ
		1
		thesek
		5 40

Username	sftpuser	
Password	***	
tocol SETP		
Submit Quit		
	Server Protocol Server Label Server Address Remote Directory Username Password	Server Label store Server Address 192.168.70.32 Remote Directory /sftpuser/ Username sftpuser Password ***

**Server Protocol**: Select your designated backup server protocol FTP or SFTP **Server Label**: Name your Server Label, free to name it.

Server Address: Put your backup server IP,

**Remote directory**: For Linux servers, specify the target directory. The example above is /sftpuser/. This is the directory where the backup uploads will be stored. On the Windows SFTP server, this part can be left clear. All uploads will be stored in the sftp user-designated directory. **Username**: Put your SFTP server username **Password**: Put your SFTP user password

Submit

# **18.2Create an EVE-NG Backup**

SSH to your EVE as root user and execute following command.

root@eve-ng:~# backup-manager

Select option (c) Create Backup.

## 18.2.1 Backup option All

Every time when you run All backup process, EVE backup manager will create new backup folder **[hostname]-[date]-[backup ID]** with selected backup content.

Select your backup items:

reate Backup========	
Choose item(s) to Backup	
A11	Remote Directory Zeftpurer/
Labs backup	Username aftputer
Lano bachap	
Database backup	X Submit Quit
Images backup	Server Protocol: Select your designated backup server protocol FTP or SFTP
Templates/Icons/Config-s	cripts/backup Xame your Server Label, free to name it.
Tmp Folders backup	Server Address: Put your backup server IP, Remote directory: For Linux server specify target directory, example above is /stipuser/. This
Mirroring	
Create Cancel	

Select All: the backup manager will create directory with all contents of EVE which includes:

- Labs,
- Users Database,
- All images (Dynamips, IOL, Qemu),
- Templates of all images including Custom templates, config scripts and icons,
- TMP Folder (TMP folder contains all of your labs saved configurations and qemu nodes)

## 18.2.2 Backup option custom selected

Every time when you run a custom selected backup process, EVE backup manager will create new backup folder **[hostname]-[date]-[backup ID]** with selected backup content.

Select Custom items: For example, if you want to back up only labs, images and full labs with a tmp directory, your selection should look like the screenshot below.

rCreate Backup Choose item(s) to Backup	ing folders broken Hirroring	
A11		
Labs backup	Select All: the backup manager will create director <ul> <li>Labs.</li> </ul>	y with all content of the EVE which include:
Database backup	Users Patabase,	
Images backup	x	
Templates/Icons/Config-s	cript backup <mark>-</mark>	Page 289 of 291
Tmp Folders backup	XGLID	, ugo 200 0, 20 ,
Mirroring		
Create Cancel		

This backup folder will only contain Lab files (topologies), all images (vendor images) from the EVE in the current stage and the TMP folder (saved labs with all configurations) for all EVE users.

## 18.2.3 Backup option with Mirroring selected

First time when you run Mirror backup process, EVE backup manager will create new backup folder "**[hostname]-eve-ng-mirror**" with selected backup content.

Select Mirroring: The mirroring option creates a single Folder named "[hostname]-eve-ng-mirror".

Using this option will only back up content of the new data added after the first backup. EVE Backup will compare data that already persists in the backup folder and will update only new items which have been changed after the backup is saved in the "[hostname]-eve-ng-mirror". It is recommended to select all items with a mirror option.

Create Backup=========	<ul> <li>Alinhiages (Dynahlips, IOL, Genhu),</li> </ul>
Choose item(s) to Backup	<ul> <li>Templates for all your images also Custom templates, config scripts and icons,</li> <li>TMP Folder (TMP folder holding all your labs saved configurations with gemu nodes)</li> </ul>
A11.	Select Custom items: For example, if you want send to backup only labs, images and full lab, saved work (tmp directory), your items selection will look like below.
Labs backup	X
Database backup	1 Charte (Lan <mark>X</mark> ), to Backet
Images backup	×
Templates/Icons/Config-scr	ipt backup 🗙
Tmp Folders backup	Datahase highrp
Mirroring	
Create Cancel	t Tep Folders backup 8

# 18.3 Restore data from EVE-NG Backup

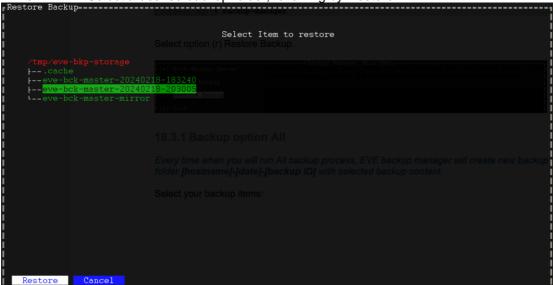

SSH to your EVE as root user and execute following command.

root@eve-ng:~# backup-manager

Select option (r) Restore Backup.

(e) Edit Backup Server	Backup Manager Main Menu
( <mark>c)</mark> Create Backup	
(r) Restore Backup	Croste Backup Choose item(s) to Backup
(q) Quit	

# 18.3.1 Select restore backup folder

IMPORTANT: Select a desired backup folder, following by Restore.

## 18.3.2 Select the items to restore

All: (Mirroring disabled) This option is useful to restore all data from backup to the new EVE installation. Backup manager will compare your existing data on your EVE with backup content and will restore only missing data.

Custom selected items: (Mirroring disabled) This option will restore custom selected items' data from backup to the new EVE installation. Backup manager will compare your existing data on your EVE with backup content and will restore only missing data.

**Important:** Restoring cluster satellite server TMP folder content for the new EVE install. Make sure that the Satellite ID matches your tmp-satellite folder number (ID)

Restore Backup	
Choose item(s) to Restore	18.3.1 Restore content from backup folder
	Select your desired regular (non-mirror) backup folder, following by Restore:
A11 2	Bestore Beckup-error en error en error en error en error er
customs	Select Item to restore
database 2	
image 2	
lab	
tmp-master	
tmp-sat1	
tmp-sat2	
tmp-sat3	4
mirroring	
Restore Cancel	

Careful! Mirroring enabled! This option will restore selected data from backup to the EVE installation. Backup manager will replace all data on your EVE with backup content and will destroy data which does not exist in backup.

Custo from your	backup to the new EVE installation. Backup ma VE with backup <b>Wathing</b> but with backup ma	n will restore custo ager will compare ssed data.
Impo sure Resta	The script will destroy all labs, configurations, and images that are not present on the selected backup. If the mirror option is unchecked, then you can restore needed labs from backup.	folder content for der number (ID)
Cho. All.	OK
