PREFACE ................................................................................................................................. 8

1 INTRODUCTION .................................................................................................................. 9

1.1 WHAT IS EVE-NG? ........................................................................................................... 9
1.2 WHAT IS EVE-NG USED FOR? ....................................................................................... 9
1.3 WHO IS EVE-NG FOR? .................................................................................................... 9

2 SYSTEM REQUIREMENTS .................................................................................................... 10

2.1 HARDWARE REQUIREMENTS ........................................................................................ 10

2.1.1 Minimal Laptop/PC Desktop system requirements .................................................... 10
2.1.2 Recommended Laptop/PC Desktop system requirements ........................................ 11
2.1.3 Virtual Server system requirements ......................................................................... 11
2.1.4 Dedicated Server (bare) system requirements ......................................................... 12
2.1.5 Nodes per lab calculator ......................................................................................... 12

2.2 SUPPORTED VIRTUALIZATION PLATFORMS AND SOFTWARE ................................. 12

2.3 UNSUPPORTED HARDWARE AND SYSTEMS ................................................................. 13

3 INSTALLATION .................................................................................................................... 14

3.1 VMWARE WORKSTATION OR VM PLAYER ..................................................................... 14

3.1.1 VMware workstation EVE VM installation using ISO image (preferred) ............... 14
3.1.1.1 EVE VM Setup and Settings ............................................................................. 14
3.1.1.2 EVE-NG VM Installation steps ...................................................................... 17

3.1.2 VMware workstation OVA deployment .................................................................. 23
3.1.2.1 Deployment and VM machine settings .............................................................. 23
3.1.2.2 OVA VM update to the latest EVE version .................................................... 25
3.1.2.3 OVA VM HDD Size expansion ......................................................................... 25

3.2 VMware ESXi .................................................................................................................... 25

3.2.1 VMware ESXi EVE installation using ISO image (preferred) ............................... 25
3.2.1.1 EVE-NG ESXi VM Setup and Settings ............................................................ 26
3.2.1.2 EVE-NG ESXi VM Installation steps .............................................................. 28

3.2.2 VMware ESXi OVA deployment .............................................................................. 33
3.2.2.1 ESXi OVA VM Setup and Settings ................................................................. 34
3.2.2.2 ESXi OVA VM update to the latest EVE version .......................................... 35
3.2.2.3 ESXi OVA VM HDD Size expansion .............................................................. 35

3.3 BARE HARDWARE SERVER EVE INSTALLATION ......................................................... 35

3.3.1 Ubuntu Server Installation Phase 1 ........................................................................... 36
3.3.2 EVE Installation Phase 2 ......................................................................................... 44
3.3.3 EVE Professional Installation Phase 3 ..................................................................... 44

3.4 EVE MANAGEMENT IP ADDRESS SETUP ................................................................. 45

3.4.1 Management static IP address setup (preferred) ..................................................... 45
3.4.2 EVE Management IP address setup via DHCP ....................................................... 48
3.4.3 EVE Management IP address reset ....................................................................... 50

3.5 EVE-NG COMMUNITY UPGRADE TO EVE-NG PROFESSIONAL ......................... 50

3.5.1 Mandatory Prerequisites ......................................................................................... 50
3.5.1.1 EVE Community disk space ......................................................................... 50
3.5.1.2 Verify current EVE Community version ......................................................... 50
3.5.1.3 Steps to upgrade to the latest EVE Community version ................................ 51

3.5.2 Upgrading EVE Community to EVE-NG Professional ........................................... 51
3.6 NATIVE TELNET CONSOLE MANAGEMENT SETUP .......................................................... 52
  3.6.1 Windows Native Console ......................................................................................... 52
  3.6.2 Linux Native Console ............................................................................................ 53
  3.6.3 MAC OSX Native Console .................................................................................... 54
3.7 LOGIN TO THE EVE WEB GUI ..................................................................................... 56

4 EVE-NG PROFESSIONAL LICENSING ............................................................................. 58
  4.1 EVE-NG PROFESSIONAL BASE LICENSE ............................................................... 58
  4.2 EVE-NG LEARNING CENTRE LICENSES .................................................................. 59
  4.3 EVE-NG CORPORATE LICENSES ............................................................................. 60
  4.4 USER ROLES COMPARISON CHART ......................................................................... 61
  4.5 LICENSE PURCHASING AND ACTIVATION ............................................................... 62

5 EVE-NG PROFESSIONAL UPDATE & UPGRADE .......................................................... 65
  5.1 EVE-NG PROFESSIONAL UPDATE .......................................................................... 65
  5.2 EVE-NG PROFESSIONAL UPGRADE ...................................................................... 65

6 TYPES OF EVE MANAGEMENT CONSOLES .................................................................. 67
  6.1 NATIVE CONSOLE ...................................................................................................... 67
   6.1.1 Native Console: telnet ............................................................................................ 67
   6.1.2 Native Console: Wireshark .................................................................................... 68
   6.1.3 Native Console: VNC ........................................................................................... 69
   6.1.4 Native Console: RDP ........................................................................................... 69
  6.2 HTML5 CONSOLE ...................................................................................................... 70
   6.2.1 HTML5 Console: Telnet ....................................................................................... 71
   6.2.2 HTML5 Console: Wireshark ............................................................................... 71
   6.2.3 HTML5 Console: VNC ......................................................................................... 72
   6.2.4 HTML5 Console: RDP ......................................................................................... 72
  6.3 HTML5 DESKTOP CONSOLE .................................................................................... 73
   6.3.1 Login to HTML5 Desktop console ........................................................................ 73
   6.3.2 HTML5 Desktop Console: telnet ......................................................................... 74
   6.3.3 HTML5 Desktop Console: Wireshark .................................................................... 75
   6.3.4 HTML5 Desktop Console: RDP .......................................................................... 75
   6.3.5 HTML5 Desktop Console: ThinClient Files exchange .......................................... 75

Preface

When I first heard about EVE-NG I was skeptical. Back then I used to Lab mainly with ESX by deploying many virtual Devices and connecting them manually by separate vSwitches for Point-to-Point connections. The Problem with that was, that it was extremely time-consuming and did not scale - for every new Device I had to create multiple vSwitches to interconnect them with the virtual Machines - a Nightmare. I was in the middle of my JNCIE-Exam-Prep when I first saw EVE-NG on Twitter - I downloaded the Community Edition, which was the only Edition back then and I was amazed how easy Labbing all of a sudden was. No more deploying of vSwitches to interconnect nodes and boy did it Scale…

If you follow me on Twitter you know, that I’m one of the hardest Juniper Fanboys and of course my Goal was to "Juniperize" EVE. I started to get in touch with UD and Alain and found myself into the Position as one of the Juniper Test Guys. Meanwhile I added nearly all Juniper related Devices (including vSRX and JATP) and I still test a Lot - but now on EVE-Pro.

The Pro-Edition was a big step forward for the Project. It added some nice Features like "hot-add-interconnect" and the Ability to use EVE-NG with multiple Users. Especially Companies will love EVE as it is THE Solution for Labs and PoC's. I have successfully run over 30 PoC's in EVE and over 100 Labs (Job-Related and Personal Labs) - and I still enjoy it every day thanks to EVE and the amazing Team behind it. When the Guys asked me to write the Introduction I was of course honored and now this Book is finally coming out to help you on your Quest to Setup, Run and Manage EVE-NG in a lot of possible ways.

Well - enough from my Side. I hope you enjoy this Cookbook and use it wisely for your Everyday EVE Work. If you have Problems there is always the EVE-Forum and Live-Helpdesk - you will also find me there from time to time :) 

I wish you happy reading and if you think, that this Product is amazing feel free to support it by buying the PRO-Edition or Donating a bit – it helps to expand this already cool Product even more and it also honors all the work that the Guys spent in it.

Christian Scholz
@chsjuniper
1 Introduction

1.1 What is EVE-NG?

To describe what Emulated Virtual Environment – Next Generation (EVE-NG) is without solely stating dry facts about features, we need to elaborate more on what EVE-NG can be used for and whom it would be useful for.

In some trivial dry words, EVE-NG gives you tools to use around virtual devices and interconnect them with other virtual or physical devices. Many of its features greatly simplify the usabilities, re-usability, manageability, interconnectivity, distribution and therefore the ability to understand and share topologies, work, ideas, concepts or simply “labs”. This can simply mean it will reduce the cost and time to set up what you need or it might enable you to do tasks you would not have thought could be done this simple.

1.2 What is EVE-NG used for?

This is the real question but there is no finite answer, the possibilities are almost limitless and depends on what you want to use it for.

It can be used for studying all kinds of technologies. You can learn about general technologies or vendor specific topics. You can test new technologies like network automation, SDN, etc.

It can be used to recreate corporate networks and test changes before putting them into production. You can create proof of concepts for clients. You can troubleshoot network issues by recreating them and e.g. use Wireshark to inspect packets.

It is not just for networking, EVE can be used to test software in simulated networks, test out security vulnerabilities of any kind, system engineering like LDAP and AD servers and many many more areas.

You could set it up to automate sandboxing unknown files/software and use software to analyse short and long-term behaviour for malicious intent much simpler than without EVE-NG. The list of what EVE-NG can be used for could go on indefinitely, possibilities are limited by knowledge and imagination only. Both of which can be improved with EVE-NG.

To get a very small idea of what can be done with EVE-NG, check out the tested/supported images (many have not been tested, almost everything virtual should run on EVE-NG) and refer to section 16.

EVE-NG helps you achieve what you want to and more.

1.3 Who is EVE-NG for?

EVE-NG is for everyone working in the Information Technology Sector, period.

It is for very large enterprise companies, training facilities, service providers, consultants, people who want to train themselves; it is for everyone, it is for YOU!

Use-cases that are more than worth it, almost priceless even, can be found everywhere.

The EVE-NG community version is free for everyone; while the paid professional version adds a few things that make your life easier. Almost everything can still be done with the free version, just less conveniently and therefore more time-consuming. However with the free version, the possibility to train yourself with technologies, hone your skills and become an expert even with very no monetary possibilities. For some this is and has been life changing.
2 System requirements

EVE-NG is available in the OVA or ISO file format. The Open Virtual Appliance (OVA) format is an archive (TAR) which packages disks and configuration files that are used to describe a virtual machine. It can be used to deploy a VM in hypervisors like VMware Workstation, Player and ESXi. Please note that installing EVE as a Virtual Machine (VM) will mean any nodes deployed within EVE will be nested. Nested virtualization causes degraded performance in deployed nodes. This should be fine for lab purposes as long as the host meets or exceeds the resource requirements for the deployed nodes.

EVE-NG can also be installed directly on physical hardware, without a hypervisor, using the provided ISO image. This is referred to as a “bare metal” install and is the most recommended method of installing EVE-NG.

2.1 Hardware requirements

2.1.1 Minimal Laptop/PC Desktop system requirements

Prerequisites:

CPU: Intel CPU supporting Intel® VT-x /EPT virtualization
Operating System: Windows 7, 8, 10 or Linux Desktop
VMware Workstation 12.5 or later
VMware Player 12.5 or later

<table>
<thead>
<tr>
<th>PC/Laptop HW requirements</th>
<th>EVE Virtual machine requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>CPU</td>
<td>CPU</td>
</tr>
<tr>
<td>Intel i5/i7 (4 Logical processors), Enabled Intel virtualization in BIOS</td>
<td>4/1 (Number of processors/Number of cores per processor) Enabled Intel VT-x/EPT virtualization engine</td>
</tr>
<tr>
<td>RAM</td>
<td>RAM</td>
</tr>
<tr>
<td>8Gb</td>
<td>6Gb or more</td>
</tr>
<tr>
<td>HDD Space</td>
<td>HDD</td>

<tr>
<td>40Gb</td>
<td>40Gb or more</td>
</tr>
<tr>
<td>Network</td>
<td>Network</td>
</tr>
<tr>
<td>LAN/WLAN</td>
<td>VMware NAT or Bridged network adapter</td>
</tr>
</tbody>
</table>

Note: Minimal PC Desktop/Laptop will be able to run small Labs. The performance and quantity of nodes per lab depend on the types of nodes deployed in the lab.

Example:
IOL image-based nodes: up to 40-50 nodes per lab
Dynamips image-based nodes: up to 20-25 nodes per lab
vIOS image-based nodes: up to 8-10 nodes per lab
CSRv1000 or XRv image-based nodes: up to 2-3 per lab
2.1.2 Recommended Laptop/PC Desktop system requirements

**Prerequisites:**

CPU: Intel CPU supporting Intel® VT-x/EPT virtualization  
Operation System: Windows 7, 8, 10 or Linux Desktop  
VMware Workstation 12.5 or later  
VW Ware Player 12.5 or later

<table>
<thead>
<tr>
<th>PC/Laptop HW requirements</th>

</tr>
</thead>
<tbody>
<tr>
<td>CPU</td>
<td>Intel i7 (8 Logical processors), Enabled Intel virtualization in BIOS</td>
</tr>
<tr>
<td>RAM</td>
<td>32Gb</td>
</tr>
<tr>
<td>HDD Space</td>
<td>200Gb</td>
</tr>
<tr>
<td>Network</td>
<td>LAN/WLAN</td>
</tr>
</tbody>
</table>

**EVE Virtual machine requirements**

| CPU | 8/1 (Number of processors/Number of cores per processor)  
Enabled Intel VT-x/EPT virtualization engine |
| RAM | 24Gb or more |
| HDD | 200Gb or more |
| Network | VMware NAT or Bridged network adapter |

Note: PC Desktops/Laptops will be able to run small to medium Labs. Performance and quantity of nodes per lab depend on the type of nodes deployed in the lab.

Example:  
IOL image-based nodes: up to 120 nodes per lab  
vIOS image-based nodes: up to 20-40 nodes per lab  
CSR image-based nodes: up to 10 per lab

2.1.3 Virtual Server system requirements

**Prerequisites:**

CPU: Intel Xeon CPU supporting Intel® VT-x with Extended Page Tables (EPT)  
Operation System: ESXi 6.0 or later

<table>
<thead>
<tr>
<th>Server HW requirements</th>
<th></th>
</tr>
</thead>
</table>
| CPU | Recommended CPU 2x Intel E5-2650v3 (40 Logical processors) or better supporting Intel® VT-x with Extended Page Tables (EPT)  
Minimum CPU is any Intel Xeon CPU supporting Intel® VT-x with Extended Page Tables (EPT) |
| RAM | 128Gb |
| HDD Space | 2Tb |
| Network | LAN Ethernet |
**EVE Virtual machine requirements**

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>CPU</td>
<td>32/1 (Number of processors/Number of cores per processor)</td>
<td>Enabled Intel VT-x/EPT virtualization engine</td>

<td></td>
</tr>
<tr>
<td>HDD</td>
<td>800Gb or more</td>
<td></td>
</tr>
<tr>
<td>Network</td>
<td>vSwitch/VMnet</td>
<td></td>
</tr>
</tbody>
</table>

Note: Performance and quantity of nodes per lab depends from the type of nodes used in the lab.

Example:
120 IOL image-based lab
20 CSRv1000 image-based nodes per lab

### 2.1.4 Dedicated Server (bare) system requirements

**Prerequisites:**
- CPU: Intel Xeon CPU supporting Intel® VT-x with Extended Page Tables (EPT)
- Operation System: Ubuntu Server 16.04.4 LTS x64

<table>
<thead>
<tr>
<th><strong>Server HW requirements</strong></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>CPU</strong></td>
<td>Recommended CPU Intel E5-2650v3 (40 Logical processors) or</td>

<td><strong>RAM</strong></td>
<td>128Gb</td>
</tr>
<tr>
<td><strong>HDD Space</strong></td>
<td>2Tb</td>
</tr>
<tr>
<td><strong>Network</strong></td>
<td>LAN Ethernet</td>
</tr>
</tbody>
</table>

Note: Performance and quantity of nodes per lab depends from type of nodes used in the lab.

### 2.1.5 Nodes per lab calculator

It is recommended to use the "nodes per lab calculator" to achieve best performance and avoid overloading your EVE system.

[https://docs.google.com/spreadsheets/d/1J6jJlXHcid_A661grBOu73rjFOeoHPhGHi9iJb1zlQpE/edit#gid=0](https://docs.google.com/spreadsheets/d/1J6jJlXHcid_A661grBOu73rjFOeoHPhGHi9iJb1zlQpE/edit#gid=0)

### 2.2 Supported virtualization platforms and software

- VMware Workstation 12.5 or later
- VMware Player 12.5 or later
- VMware ESXi 6.0 or later
• Ubuntu Server 16.04 LTS as platform for bare metal

2.3 Unsupported hardware and systems

The following are currently not supported:

• AMD CPU based PC or Server
• VirtualBox virtualization
• Citrix XenServer
• Microsoft HyperV
• Ubuntu 17.x or 18.x as platform

⚠️ Warning: Using VMware vMotion or upgrading ESXi to the next version can break the structure of your EVE VM which may cause the license to become invalid.
3 Installation

3.1 VMware Workstation or VM Player

3.1.1 VMware workstation EVE VM installation using ISO image (preferred)

Download EVE-NG Professional ISO distribution image: http://www.eve-ng.net/downloads/eve-ng

3.1.1.1 EVE VM Setup and Settings
Step 3: Select a Guest Operating system: Linux and select the version: Ubuntu 64-bit

Step 4: Enter the name for your EVE-PRO VM and select Location where your EVE VM will be stored on the host PC.

Step 5: Type your desirable HDD size and select “Store virtual disk as single file”.

Step 6: Press Customize Hardware
Step 7: Assign desirable memory

Step 8: Set Processors “Number of processors” and “Number of cores per processor”. Set Intel VT-x/EPT Virtualization engine to ON (checked).

NOTE: VMware Player will display only one CPU option: Number of processors.

⚠️ NOTE: Plan your EVE CPU settings. After your EVE license has been received, only the “Number of processors” setting may be changed. Changing “Cores per socket” after a license request has been completed can cause EVE license issues

Step 9a: Select your desirable Network Adapter. **Laptop PC**

NOTE: It is recommended to choose the NAT adapter option for Laptops to avoid EVE management interface IP changes. This can happen anytime the laptop is connected to a different SSID

Step 9b: Select your desirable Network Adapter. **Desktop PC**

NOTE: Desktop PC EVE management interface can be either NAT or Bridged to home LAN subnet.
Step 10: Select CD/DVD Option: “use ISO image file.” Browse to your downloaded EVE-PRO.iso (actual name can be different) file

Step 11: Confirm VM Settings.

3.1.1.2 EVE-NG VM Installation steps

⚠️ Mandatory Prerequisites: Internet must be reachable from your PC and VMware. EVE ISO installation requires internet access to get updates and install the latest EVE-PRO version from the EVE-NG repository. DNS must work as well, to check it, do a named ping, for example ping www.google.com

EVE VM Installation from ISO has 3 Phases

Phase 1 (Ubuntu installation)
Step 1: Power ON EVE VM. Chose English and confirm with Enter.

Step 2: Be sure that “Install EVE PRO VM” is highlighted. Confirm with Enter.

Step 3: Make sure that English is selected and confirm with Enter.

Step 4: You can select your own Location, or later, after management IP assignment, location will be set automatically. You can leave United States. Confirm with Enter.

Step 5: **DHCP ENABLED.** EVEs hostname by default is eve-ng. You can change it if you wish. Using the Tab key select continue and confirm with Enter. Continue to **Step 14**

Step 6: **DHCP DISABLED/Static IP setup.** If you have not enabled DHCP in the network, you must assign an IP address manually. Confirm Continue with Enter.
Step 7: Confirm selection “Configure network manually” with Enter

Step 8: Enter your desirable EVE management IP, using the Tab key select “Continue” and confirm with Enter

Step 9: Enter your subnet mask, using the Tab key select “Continue” and confirm with Enter

Step 10: Enter your Gateway IP, using the Tab key select “Continue” and confirm with Enter
Step 11: **IMPORTANT.** The name server must be able to resolve public DNS entries and will be used during the next install steps. Enter your name server IP, using the Tab key select “Continue” and confirm with Enter.

Step 12: EVEs hostname by default is **eve-ng.** It can be changed if you wish, using the Tab key select continue and confirm with Enter.
Step 13: Enter your network's domain name. You are free to use anything you like, for example: eve-ng.net
Using the Tab key select continue and confirm with Enter.

Step 14: If your DNS IP settings are correct, Ubuntu will detect your location automatically by connecting to Ubuntu servers. Confirm with Enter.

Step 15: If you have a proxy in use for your internet access, enter your network proxy settings. If no proxy is used, select Continue with the Tab key and confirm with Enter.

Step 16: Select no automatic updates and confirm with Enter. Security updates can later be run manually from EVE cli.

EVE VM Installation Phase 2 (EVE installation)

Step 17: After the “Finish the installation” screen appeared, DO NOT remove CD ISO from the VM or hit Enter continue. First we have to verify that EVE is ready for the installation phase 2.

Step 18: Without powering off your EVE VM, open the EVE VM settings and make sure that CD/DVD ISO “Device status connected” and “Connect at power on” is checked. Confirm with OK.
Step 19: Return to the EVE console screen and continue with Enter, the EVE VM will reboot and finish the installation phase 2

Step 20: Once the EVE login screen appears, login to the CLI with root/eve and continue with installation phase 3

EVE VM Installation Phase 3 (Management IP setup and updates)

Step 21: Setup EVEs Management IP address. A Static IP address setup is preferred.

Follow steps in section 3.4.1 for static IP, 3.4.2 for DHCP IP

Step 22: After your EVE is rebooted, login to the EVE CLI and type:

```
apt update
```
### Step 23: After update, Step 22 is completed, continue by typing:

```bash
apt install eve-ng-dockers
```

It can take some time depending on your Internet connection speed.

### Step 24: After Step 23 is completed and EVE CLI prompt back to cli, Reboot EVE with type:

```
reboot
```

### Step 25: Proceed to section 4 “Obtain EVE-NG Professional license”

⚠️ **IMPORTANT NOTE:** You must prepare and upload at least a couple of images to start building your labs. Refer to section 16

---

### 3.1.2 VMware workstation OVA deployment

Download EVE-NG Professional OVA image:  
[http://www.eve-ng.net/downloads/eve-ng](http://www.eve-ng.net/downloads/eve-ng)

#### 3.1.2.1 Deployment and VM machine settings

<table>
<thead>
<tr>
<th>Step 1: VMware workstation or VM Player, Menu File/Open</th>
<th>Step 2: Browse your downloaded EVE-PRO.OVA file, followed by Open</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1.png" alt="VMware workstation" /></td>
<td><img src="image2.png" alt="Download OVA" /></td>
</tr>
</tbody>
</table>
Step 3: Browse your desired EVE VM store destination followed by Import

Step 4: Open your EVE VM Settings and set the desired RAM.

Step 5: IMPORTANT Set CPU Number of Cores and number of cores per processor. Set Intel VT-x/EPT Virtualization engine to ON (checked).

NOTE: VMware Player will display only one CPU option: Number of processors.

⚠️ NOTE: Plan your EVE CPU settings. After EVE license is loaded, only “CPU Cores” settings can be changed. Changing “Cores per socket” after a license request has been completed can cause EVE license issues.

Step 6: Laptop PC Select your desirable Network Adapter.

NOTE: It is recommended to choose the NAT adapter option for Laptops to avoid EVE management interface IP changes. This can happen anytime the laptop is connected to a different SSID.
Step 7: **Desktop PC** Select your desirable Network Adapter.

NOTE: Desktop PC EVE management interface can be either NAT or Bridged to home LAN subnet.

Step 8: Power ON your EVE VM and follow Management IP setup instructions described in section 3.4.1 for Static IP or 3.4.2 for DHCP IP.

---

**Step 9:** Proceed to section 4 “Obtain EVE-NG Professional license”

⚠️ **IMPORTANT NOTE**: You must prepare and upload at least a couple of images to start building your labs. Refer to section 16

3.1.2.2 OVA VM update to the latest EVE version

Step 9: Make sure if your EVE OVA VM is up to date to the newest EVE version. Follow the steps described in section 5.

3.1.2.3 OVA VM HDD Size expansion

⚠️ **IMPORTANT NOTE**: DO NOT expand the current EVE OVA HDD. To expand your EVE system size, please follow Troubleshooting section 15.2

3.2 VMware ESXi

3.2.1 VMware ESXi EVE installation using ISO image (preferred)

Download EVE-NG Professional ISO installation image:

http://www.eve-ng.net/downloads/eve-ng
3.2.1.1  EVE-NG ESXi VM Setup and Settings

Step 1: Upload EVE ISO image to the ESXi store.

Step 2: Create NEW VM

Step 3: Enter the name for your EVE-PRO VM and select Guest Operating system
Linux and version: Ubuntu 64-bit

Step 4: Select Location where your EVE VM will be stored in HDD.
Step 5: IMPORTANT Customize your EVE VM CPU Settings. Set CPU Number of Cores and number of cores per processor. Set Intel VT-x/EPT Virtualization to ON (checked).

**NOTE:** Plan your EVE CPU settings. After EVE license is loaded, only “CPU Cores” settings can be changed. Changing “Cores per socket” after a license request has been completed can cause EVE license issues.

Step 6: Assign desirable RAM for your EVE

Step 7: Set the size of HDD for your new EVE VM. It is recommended to set “Thick Provisioned eagerly provisioned”. Server EVE HDD is recommended to set at least 500Gb

Step 8: Set your Management network. Adapter type VMXNET3

**NOTE:** Additional Network Adapters can be added for further use.
3.2.1.2 EVE-NG ESXi VM Installation steps

⚠️ **Mandatory Prerequisites:** Internet must be reachable from your PC and VMware. EVE ISO installation requires internet access to get updates and install the latest EVE-PRO version from the EVE-NG repository. DNS must work as well, to check it, do a named ping, for example ping www.google.com

EVE ESXi VM Installation from ISO has 3 Phases

**Phase 1 (Ubuntu installation)**

**Step 1:** Power ON EVE VM. Chose English and confirm with Enter.

**Step 2:** Be sure if “Install EVE PRO VM” is highlighted. Confirm with Enter.

**Step 9:** Add new device to your EVE VM, CD/DVD

**Step 10:** Set DVD drive to “Datastore ISO File” and browse your uploaded EVE-PRO.iso. Make sure that Status is checked ON, “Connect at power on”
Step 3: Make sure if English is selected and confirm with Enter.

Step 4: You can select your own Location, or later, after management IP assignment, location will be set automatically. You can leave United States. Confirm with Enter.

Step 5: **DHCP ENABLED**, EVEs hostname by default is `eve-ng`. You can change it if you wish. Using the Tab key select continue and confirm with Enter. Continue to **Step 14**.

Step 6: **DHCP DISABLED**/Static IP setup. If you have not enabled DHCP in the network, you must assign an IP address manually. Confirm Continue with Enter.

Step 7: Confirm selection “Configure network manually” with Enter

Step 8: Enter your desirable EVE management IP, using the Tab key select “Continue” and confirm with Enter.
Step 9: Correct your subnet mask, using the Tab key select “Continue” and confirm with Enter

Step 10: Correct your Gateway IP, using the Tab key select “Continue” and confirm with Enter

Step 11: IMPORTANT. Name server must respond to the Internet and will be used during the next install steps. Enter your name server IP. Using the Tab key select “Continue” and confirm with Enter

Step 12: EVE hostname by default is **eve-ng**. It can be changed if you wish. Using the Tab key select continue and confirm with Enter
Step 13: Enter your network domain name. You are free to use any, for example: 

```
eve-ng.net
```

Using the Tab key select continue and confirm with Enter.

Step 14: If your DNS IP settings are correct, Ubuntu will detect your location from Internet. Confirm with Enter.

Step 15: If you have proxy in use for your internet, assign your network proxy settings. If no proxy in use, with Tab key select Continue and confirm with Enter.

Step 16: Select no automatic updates and confirm with Enter. Security updates can be run later manually from EVE cli.
EVE VM Installation Phase 2 (EVE installation)

Step 17: After the “Finish the installation” screen appears, **DO NOT remove** CD ISO from VM or hit Enter continue. We have to verify settings for EVE installation Phase 2. Follow step 9.

Step 18: Without powering off the EVE VM, open the EVE VM settings and make sure that CD/DVD ISO “Device status connected” and “Connect at power on” is checked. Confirm with OK.

Step 19: Return back to EVE console screen and confirm Continue with Enter, EVE VM will reboot and continue Phase 2 installation

Step 20: Once EVE login screen appeared, login in CLI with **root/eve** and follow installation Phase 3
EVE VM Installation Phase 3 (Management IP setup and updates)

Step 21: Setup EVE Management IP address. A Static IP address setup is preferred

Follow steps in section 3.4.1 for static IP, 3.4.2 for DHCP IP

Step 22: After your EVE is rebooted, Login to EVE CLI and type:

```
apt update
```

Step 23: After update, Step 22 is completed, continue with type:

```
apt install eve-ng-dockers
```

This can take some time depending on your Internet connection and disk speed.

Step 24: After Step 23 is completed and you are back on the EVE CLI prompt, reboot EVE by typing

```
reboot
```

Step 25: Go to section 4 to obtain a license for EVE-NG Professional

⚠️ IMPORTANT NOTE: You must prepare and upload at least a couple of images to start building your labs. Refer to section 16

3.2.2 VMware ESXi OVA deployment

Download EVE-NG Professional OVA image:
http://www.eve-ng.net/downloads/eve-ng
### 3.2.2.1 ESXi OVA VM Setup and Settings

**Step 1:** ESXi Host, Create/Register VM

- Select option Deploy a virtual machine from an OVF or OVA file.

**Step 2:** Set option Deploy a virtual machine from an OVF or OVA file

- Type the name for your new EVE VM and browse to select your downloaded EVE OVA file.

**Step 3:** Type the name for your new EVE VM and browse to select your downloaded EVE OVA file

- Select the storage where your EVE VM will be deployed.

**Step 4:** Select the storage where your EVE VM will be deployed.

- Select your Management network and **Thick Disk provisioning**. EVE OVA HDD is only 40Gb large. It is recommended after installation to add extra HDD. Section 15.2

**Step 5:** Select your Management network and **Thick Disk provisioning**. EVE OVA HDD is only 40Gb large. It is recommended after installation to add extra HDD. Section 15.2

**Step 6:** **IMPORTANT** Open VM Settings.
- Set the quantity of CPUs and number of cores per socket. Set Intel VT-x/EPT Hardware Virtualization engine to ON (checked).

**NOTE:** Plan your EVE CPU settings! After you received your EVE license, only the CPU quantity setting can be changed. Changing the “Cores per socket” after a license request has been completed can
Step 7: Set desirable RAM for your EVE.

Step 8: Power ON your EVE VM and follow Management IP setup instructions described in section 3.4.1 for Static IP or 3.4.2 for DHCP IP.

Step 9: Proceed to section 4 “Obtain EVE-NG Professional license”

⚠️ IMPORTANT NOTE: You must prepare and upload at least a couple of images to start building your labs. Refer to section 16

3.2.2.2 ESXi OVA VM update to the latest EVE version

Make sure that your EVE OVA VM is up to date with the newest EVE version. Follow the steps described in section 5 for upgrade instructions

3.2.2.3 ESXi OVA VM HDD Size expansion

⚠️ NOTE: IMPORTANT! DO NOT expand the current EVE OVA HDD. To expand your EVEs system disk size, please follow the troubleshooting section 15.2

3.3 Bare hardware server EVE installation

Download Ubuntu Server 16.04.4 LTS ISO image:
Mandatory Prerequisites: Internet must be reachable from your PC and VMware. EVE ISO installation requires internet access to get updates and install the latest EVE-PRO version from the EVE-NG repository. DNS must work as well, to check it, do a named ping, for example ping www.google.com

3.3.1 Ubuntu Server Installation Phase 1

Step 1: Create a bootable DVD disk or USB flash drive with an Ubuntu server image. Boot your server from ISO. Make sure that English is selected. Confirm with Enter.

Step 2: Select the first Option “Install Ubuntu Server” Confirm with Enter.

Step 3: Make sure that English is selected and confirm with Enter.

Step 4: You can select your own Location, or later, after management IP assignment, location will be set automatically. You can leave United States. Confirm with Enter.

Step 5: Configure the keyboard, leave “No” selected and confirm with enter.

Step 6: Leave English (US) as selection, confirm with Enter.
Step 7: Leave English (US) as selection and confirm with Enter

Step 8: Select your management network adapter and confirm with Enter

Step 9: DHCP ENABLED
Continue with Step 16

Step 10: DHCP DISABLED/Static IP setup.
If have not enabled DHCP in the network, you must assign an IP address manually. Continue with Enter.
Step 11: Select “Configure network manually” and confirm with Enter

Step 12: Enter your desirable EVE management IP, using the Tab key select “Continue” and confirm with Enter

Step 13: Enter your subnet mask, using the Tab key select “Continue” and confirm with Enter

Step 14: Enter your Gateway IP, using the Tab key select “Continue” and confirm with Enter

Step 15: **IMPORTANT**: The name server must be able to resolve public DNS entries and will be used during the next install steps. Enter your name server IP, using the Tab key select “Continue” and confirm with Enter

Step 16: Type your EVE server hostname, Example: eve-ng
Enter

Step 17: Type your domain name. You are free to use any. Example: eve-ng.net

Step 18: Type your Ubuntu username, Example: user

Step 19: Select a username (e.g. “user”) for your account and Continue

Step 20: Enter a password for your new user
Step 21: Re-enter your password and continue

Step 22: If you want to use a weak password, click “Yes” on this screen.

Step 23: Encrypt your Home directory, “No”

Step 24: If your DNS and internet are working properly, Ubuntu will automatically detect your location and timezone. Confirm your timezone and continue with enter

Step 25: Select HDD partitioning method “Guided – use entire disk and set up LVM”

Step 26: Select your disk partition, and confirm with enter
Step 27: Confirm write changes to disk with “Yes” and hit enter to continue

Step 28: Select the volume size and continue

Step 29: Confirm write the changes to disk with “Yes” and continue

Step 30: If you have a proxy in use for your internet, enter your network proxy settings. If no proxy is used, use the tab key to select Continue and confirm with enter.

Step 31: Select “No automatic updates” and continue

Step 32: Using the Arrow keys select “OpenSSH server” for installation and confirm with the Space key (*), continue with enter
Step 33: Confirm “Install the GRUB bootloader to the master boot record” with “Yes” and continue with enter

Step 34: REMOVE CD/DVD installation media and continue with enter

Step 35: Login in to your Ubuntu with the username created above (user/Test123 was the example)

Step 36: Continue as root user. Enter the commands below, each followed by the enter key.

```
sudo su
Test123
cd
```

Step 37: Create root password

Step 38: Verify and set your hostname if you haven’t set it before
sudo passwd root
Repeat your desirable password twice; Example: eve

nano /etc/hostname
Edit it if necessary: eve-ng
Confirm edit with ctrl+o followed by Enter
And ctrl+x for Exit

Step 39: Verify your host settings

nano /etc/hosts
Your assigned static IP will be bound to your server hostname and domain

Confirm edit with ctrl+o followed by enter
And ctrl+x for Exit

Step 40: Edit permissions for root user to allow SSH access to EVE server

nano /etc/ssh/sshd_config
Find and edit PermitRootLogin to "yes"

Confirm edit with ctrl+o followed by enter
And ctrl+x for Exit

Restart ssh service:
sudo service ssh restart

Step 41: IMPORTANT
SSH to your EVE server with Putty or any other telnet client program.
Update the Ubuntu grub CMD Line with the following customized command. Make sure you enter this command below in a single line and confirm it with the enter key.

sed -i -e 's/GRUB_CMDLINE_LINUX_DEFAULT=.*/GRUB_CMDLINE_LINUX_DEFAULT="net.ifnames=0 noquiet"/ /etc/default/grub

Update GRUB, Followed by Enter

update-grub

⚠️ WARNING: DO NOT REBOOT your Ubuntu/EVE yet, proceed to step 42!

Step 42: IMPORTANT
Rename your Server interface name to eth0

nano /etc/network/interfaces

Before edit:

After edit:
3.3.2 EVE Installation Phase 2

Step 43: Obtain EVE's repository key with the following one-line command and hit enter

```
wget -O http://www.eve-ng.net/repo/eczema@eczema.com.gpg.key | sudo apt-key add -
```

Step 44: Get the latest repository content with the line below and hit enter

```
apt-get update
```

Step 45: Enter the one-liner below to add EVE's repository and hit enter

```
sudo add-apt-repository "deb [arch=amd64] http://www.eve-ng.net/repo xenial main"
```

Step 46: Get the latest repository content again

```
apt-get update
```

Step 47: Enter this one-liner followed by the enter key to start the installation

```
DEBIAN_FRONTEND=noninteractive apt-get -y install eve-ng
```

3.3.3 EVE Professional Installation Phase 3

Step 48: After the installation is completed, reboot EVE and follow the Management IP setup instructions in section 3.4.1. It is strongly recommended for bare-metal installations to use a static IP address. After the IP address setup, continue with Step 49

Step 49: Update repositories:

```
apt update
```

Step 50: Upgrade from the repositories:

```
apt upgrade
```

Step 51: Reboot EVE

```
reboot
```
NOTE: At this stage we have finished installing EVE Community version

Step 52: Run EVE-NG Professional installation

```
apt install eve-ng-pro
```

Step 53: Reboot

```
reboot
```

Step 54: Update repositories

```
apt update
```

Step 55: The following command will begin the second part of the EVE-NG Professional installation, confirm the installation with “y”

```
apt install eve-ng-dockers
```

Step 56: Reboot

```
reboot
```

Step 57: Continue to section 4 to obtain your EVE-NG Professional license

⚠️ IMPORTANT NOTE: You must prepare and upload at least a couple of images to start building your labs. Refer section 16

### 3.4 EVE Management IP Address setup

#### 3.4.1 Management static IP address setup (preferred)

The steps below will walk you through the network setup and assign a static management IP for EVE.

Step 1: Log into the EVE CLI using the default login root/eve After login, type your preferred root password for EVE, default is eve. **Remember it for further use.** Confirm with enter

```
NOTE: Typed characters in the password field are not visible.
```

Step 2: Retype your root password again and confirm with enter.
Step 3: Choose your EVE VMs hostname. By default, it is **eve-ng**. You can leave it as it is. Confirm with enter.

Step 4: Type your domain name for your EVE VM. By default, it is example.com. The default value can be used as well. Confirm with enter.

Step 5: Using the arrow keys, select the option "static", confirm your selection with the space key, followed by enter.

Step 6: Type your desirable EVE management IP. Confirm with enter.
<table>
<thead>
<tr>
<th>Step 7:</th>
<th>Type the subnet mask of your EVE management network. Confirm with enter.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 8:</td>
<td>Type your networks gateway IP. Confirm with enter.</td>
</tr>
<tr>
<td>Step 9:</td>
<td>Type your networks primary DNS IP. Confirm with enter. IMPORTANT: DNS must be reachable and resolve public addresses.</td>
</tr>
<tr>
<td>Step 10:</td>
<td>Type your network Secondary DNS IP. Confirm with Enter. IMPORTANT: DNS must be reachable and resolve public addresses.</td>
</tr>
<tr>
<td>Step 11:</td>
<td>Type your preferred NTP server IP. It can be left empty as well; in this case, your EVE VM will automatically assign the time from its host.</td>
</tr>
<tr>
<td>Step 12:</td>
<td>If you have a proxy in use for your Internet, select the respective proxy option and configure your proxy settings. By default, it is direct connection (no proxy). Confirm your selection with enter. EVE will reboot automatically.</td>
</tr>
</tbody>
</table>
IMPORTANT NOTE: If you are setting up your management IP for the first time (fresh EVE installation), please return to the install section and complete installation phase 3.

3.4.2 EVE Management IP address setup via DHCP

The steps below will walk you through the network setup and assign a management IP for EVE via DHCP.

Step 1: Log into the EVE CLI using the default login root/eve After login, type your preferred root password for EVE, default is eve. Remember it for further use. Confirm with enter.

NOTE: Typed characters in the password field are not visible.

Step 2: Retype your root password again and confirm with enter.

Step 3: Choose your EVE VMs hostname. By default, it is eve-ng. You can leave it as it is. Confirm with enter.

Step 4: Type your domain name for your EVE VM. By default, it is example.com. The default value can be used as well. Confirm with enter.
Step 5: Using the arrow keys, select the option “dhcp”, confirm your selection with the space key, followed by enter.

Step 6: Type your preferred NTP server IP. It can be left empty as well; in this case, your EVE VM will automatically assign the time from its host.

Step 7: If you have a proxy in use for your Internet, select the respective proxy option and configure your proxy settings. By default, it is direct connection (no proxy). Confirm your selection with enter. EVE will reboot automatically.
IMPORTANT NOTE: If you are setting up your management IP for the first time (fresh EVE installation), please return to the install section and complete installation phase 3.

3.4.3 EVE Management IP address reset

If for any reason you need to change these settings after the installation, you can rerun the IP setup wizard. Type the following command in the CLI and hit enter:

```bash
rm -f /opt/ovf/.configured
```

Then reboot. Once you log into the CLI again, EVE will go through the network setup again. Please follow the steps in section 3.4.1 for Static IP or 3.4.2 for DHCP IP.

3.5 EVE-NG Community upgrade to EVE-NG Professional

3.5.1 Mandatory Prerequisites

Mandatory Prerequisites: Internet must be reachable from your PC and VMware. EVE ISO installation requires internet access to get updates and install the latest EVE-PRO version from the EVE-NG repository. DNS must work as well, to check it, do a named ping, for example ping www.google.com

3.5.1.1 EVE Community disk space

You must have enough HDD space available. The main eve-ngx-vg-root partition must have at least 10GByte free space while the boot partition must have at least 50Mbyte. To check how much space is available on your HDD, enter the following command into the CLI of EVE:

```bash
df -h
```

```
root@eve-ngx:~# df -h
Filesystem Size Used Avail Use% Mounted on
udev 7.5G 0 7.5G 0% /dev
/dev/vserver/eve-ngx-vg-root 11G 23G 330G 44% /run
tmpfs 1.6G 22M 1.6G 2% /run
/dev/vserver/eve-ngx-vg-root 71G 228G 330G 44% /run
tmpfs 5.0M 0 5.0M 0% /run/lock
tmpfs 7.0M 0 7.0M 0% /sys/fs/cgroup
/dev/edal 247M 145M 254M 28% /boot
root@eve-ngx:~#
```

To free up space on the /boot, enter the following command, hit enter and confirm with “y”

```bash
apt autoremove
```

3.5.1.2 Verify current EVE Community version

You have to make sure that your EVE Community Edition is of version (v2.0.3-86) or later. You must be able to reach the internet from your PC, VMware or Server.

To check your current EVE-NG version, enter the following command
You can also verify your current EVE version from the WEB GUI. Top menu bar, System, System status.

You can check the version number of the newest currently available Community version on the EVE-NG Community site: http://www.eve-ng.net/community.

3.5.1.3 Steps to upgrade to the latest EVE Community version

Type the following commands below and hit enter after each.

```
apt update
```

In case of any Y/N prompt, answer Yes.

```
apt upgrade
```

In case of any Y/N prompt, answer Yes.

```
reboot
```

3.5.2 Upgrading EVE Community to EVE-NG Professional

⚠️ WARNING: Please be ready to purchase a license when upgrading, as you will not be able to start any nodes until a valid license has been activated on your EVE.

To upgrade to EVE-NG Pro, issue the following commands into the CLI of EVE followed by enter.

```
apt update
```
apt install eve-ng-pro

reboot

After the reboot continue with the below commands, followed by enter
apt update
apt install eve-ng-dockers
reboot

Continue to the EVE-NG Pro license purchase section of the website and follow the remaining instructions.

3.6 Native telnet console management setup

If you prefer to use a natively installed telnet client to manage nodes inside EVE, follow the steps below:

3.6.1 Windows Native Console

Step 1: Download the EVE Windows Client integration pack:

http://www.eve-ng.net/downloads/windows-client-side-pack

Step 2: Install it as administrator

Step 3: Leave the option for UltraVNC checked. UltraVNC is very tiny and the preferred VNC client for Windows by EVE.

Step 4: Continue with Next. When it asks to choose Ultra VNC Options, only leave the UltraVNC Viewer checked, the rest is not needed.

NOTE: The Wireshark option for EVE Professional is left unchecked, because
Wireshark is already integrated into EVE PRO.

Step 5: Continue with Next and finish the installation.

By default, EVE Windows Client Integration will install **Putty** as your Telnet Client. The default location for the EVE Windows Client Integration software and .reg files is: “C:\Program Files\EVE-NG”

**Set the default telnet program manually in Windows 10. Example: SecureCRT**

Step 1: Go to: Windows Settings/Apps/Default Apps/Choose Default Apps by Protocol

Step 2: Set your default Telnet program:

⚠️ **NOTE:** The first time click on the type of link that is used to access a running node inside EVE via telnet, the browser will ask to choose the telnet program. If you have prepared your default telnet program with the instructions above, you have to choose your default Telnet program.

**Example: Firefox browser:**

Set your default application, check the box “Remember my choice telnet links” and click Open link

**3.6.2 Linux Native Console**

The steps below will show how to setup the native consoles pack for Linux Mint 18 (Ubuntu):

Step 1: Go to the EVE Linux Side integration pack download page:

Step 2: Open the link to GitHub
Step 3: Scroll down to the installation part

Step 4: Login as root to your Linux system and enter the commands below:

NOTE: An internet connection is required. Enter each command line below one after the other

```
sudo add-apt-repository ppa:smartfinn/eve-ng-integration
sudo apt-get update
sudo apt-get install eve-ng-integration
```

For other Linux native console setup options please refer to:
https://github.com/SmartFinn/eve-ng-integration

3.6.3 MAC OSX Native Console

Telnet Protocol:

OSX Sierra (and older releases) is ready to use for the telnet protocol.
For High Sierra, a telnet binary must be added (Apple decided to remove it and it is not present anymore on the latest OSX releases).

Procedure to install a previous telnet binary:

Download telnet and ftp binaries from eve: [http://<your_eve_ip>/files/osx.zip](http://<your_eve_ip>/files/osx.zip)

Step 1: Reboot the Mac and hold down the “Command” and “R” key simultaneously after you hear the start-up chime, this will boot OSX into Recovery Mode

Step 2: When the “OSX Utilities” screen appears, pull down the ‘Utilities’ menu at the top of the screen instead, and choose “Terminal”

Step 3: Type the following command into the terminal then hit enter:

```
crutil disable; reboot
```

Step 4: When the OSX reboot is done, extract the osx.zip to your home directory

Step 5: Copy the files to /usr/bin and set the permissions using the terminal utility:

```
sudo -i
cp telnet ftp /usr/bin ; chmod 555 /usr/bin/telnet; chmod 555 /usr/bin/ftp
chown root:wheel /usr/bin/telnet /usr/bin/ftp
```
1. Reboot the Mac and hold down Command + R keys simultaneously after you hear the startup chime, this will boot OSX into Recovery Mode

2. When the “OSX Utilities” screen appears, pull down the ‘Utilities’ menu at the top of the screen instead, and choose “Terminal”

Type the following command into the terminal then hit enter:

```
crutil enable; reboot
```

VNC Protocol:

Download Chicken of VNC at: [https://sourceforge.net/projects/chicken/files/Chicken-2.2b2.dmg/download](https://sourceforge.net/projects/chicken/files/Chicken-2.2b2.dmg/download)

Install and use it as default VNC Client

RDP Protocol:

Download and install the Microsoft Remote Desktop on the App Store:

3.7 Login to the EVE WEB GUI

Login to the EVE management UI:

http://<your_eve_ip>/
Default user access:

User: **admin**

Password: **eve**

⚠️ **NOTE:** You can change your EVE Admin password, please refer to section 7.3.1.2

⚠️ **IMPORTANT NOTE:** You must prepare and upload at least a couple of images to start building your labs. Refer to section 16
4 EVE-NG Professional Licensing

EVE-NG Professional and Learning Centre editions require purchasing and uploading a license to activate its features. Licenses are based on an annual subscription.

EVE-NG permits up to 128 accounts to be created but restricts the number of simultaneous sessions per role to the licensed amount. To increase the number of active sessions, please purchase additional licenses on top of the base license as shown below.

⚠️ Definition: **Simultaneous session (1 license)** means one active connection to the EVE-NG Web GUI.

---

**Example1 EVE-Professional:** The license information page shows 2 Admin accounts. This means 2 Admin role-based accounts can be logged into the Web GUI simultaneously. If a third Admin account logs into the Web GUI, the first active Admin session will be disconnected. Please note that the first Admin's labs will keep running. EVE-NG PRO can have up to 128 accounts, but active sessions to the Web GUI are restricted to the number of purchased licenses.

</tr>
<tr>
<td>Admin: 2</td>
</tr>
<tr>
<td>Editors: 0</td>
</tr>
<tr>
<td>Users: 0</td>
</tr>
</tbody>
</table>

**Example2 EVE Learning Centre:** The license information page shows 2 Admin and 3 User role accounts. This means 2 Admin and 3 User accounts can be logged into the Web GUI simultaneously. If a fourth User account or third Admin account logs into the Web GUI, the first User or Admin session will be disconnected. Started labs will keep running. EVE-NG Learning Center can have up to 128 accounts, but active sessions to the Web GUI are restricted by the number of licenses purchased.

For EVE-PRO Administrator role permissions, please see section 4.4.

### 4.2 EVE-NG Learning Centre licenses

EVE-NG Learning Centre Edition - 1 Year License  

EVE-NG LC features multi user support and assigns accounts as Administrators, Editors or Users.

The first minimal Base A license allows for 2 simultaneous Admin users. It is necessary to use an Administrator account to create or manage EVE LC and other user’s role-based accounts.

#### EVE-NG PRO – A Base License (Mandatory)

This license unlocks all Pro features and two active Administrator accounts sessions. This license is mandatory for EVE LC edition.

The following licenses below can vary per your needs.

**EVE-NG PRO - Administrator License**

This license unlocks one additional active session for the Administrator role. The Administrator role can manage everything in EVE-NG without restrictions. This includes creating, deleting, and modifying all folders, labs, nodes and accounts. The Administrator is the only role that can create or modify accounts.

**EVE-NG PRO - Editor License**

This license unlocks one additional active session for the Editor role. The Editor role is restricted to a personal folder and is authorized to create, delete, or modify additional folders, labs, and nodes within them.

**EVE-NG PRO - User License**
This license unlocks one additional active session for the User role. The User role is restricted to a personal and the Shared folder and is only authorized to start, stop, and wipe nodes. An Administrator account is required to manage folders and labs within a User’s personal folder. An Editor account may manage labs in the Shared folder.

**Example: EVE Learning Centre Licensing** for 1 Teacher and a 5 Students class. Licence model below includes:

- Two administrator accounts, necessary for EVE LC labs and other user account management
- One Editor-role based account, assigned to the teacher to create/manage labs and assign them to the Shared folder for Students use. The Editor role is restricted to a personal folder and is authorized to create, delete, or modify additional folders, labs, and nodes within it.
- Optional: If wanted / needed, the Editor account for the teacher can also be replaced by an Administrator account instead.

⚠️ Five User role-based Student accounts allowing running a class with 5 simultaneous students connected to the EVE HTML GUI.

For EVE-LC role permissions, please see section 4.4.

### 4.3 EVE-NG Corporate licenses

Essentially, this is EVE Learning Centre edition with Editor role-based accounts only. This is recommended for corporate use to allow full permissions for EVE labs but to restrict being able to manage other user accounts or labs. The Editor role is restricted to a shared and a personal folder and has permissions to create, delete, or modify additional folders, labs, and nodes within them.

**EVE-NG Learning Centre Edition - 1 Year License**

EVE-NG Corporate features multi user support and assigns accounts as Administrators or Editors. The first (mandatory) Base A license allows for 2 simultaneous Admin users. It is necessary to have an Administrator account to create or manage EVE LC and other user’s role-based accounts.

**Example: EVE Corporate Licensing** for 5 Editor users. License model below includes:
Two administrator accounts necessary for EVE Corporate labs and other user accounts management

Five Editor-role based accounts. The Editor role is restricted to a shared and a personal folder and has permissions to create, delete, or modify additional folders, labs, and nodes within them.

EVE Corporate role rights, please follow section 4.4.

### 4.5 License purchasing and activation

**⚠️** Before purchasing a license, the customer must have **EVE-NG Professional** installed and readily accessible.

**⚠️** Recommended browser for license operations are: Chrome or Mozilla Firefox

**⚠️** You must be logged in to the EVE WEB GUI as Administrator.

**Step 1:** Obtain your license request from the Licensing tab of the top menu of the EVE PRO WEB GUI. License requests will work only if the host machine (and hypervisor if running a VM) has **Intel VT-x/EPT** enabled!

(See section 3 for details)

**Step 2:** Copy the content of the license request and keep it ready for the order process at **Step 6.** Orders without a license request cannot be processed.

</tbody>
</table>
Step 3: Go to the EVE PRO or Learning Centre Purchase Portal and choose your Licenses and quantity. Licenses that are unnecessary for your EVE Learning Centre or Corporate Edition licensing needs, can simply be deleted from your order by clicking on the cross next to them to remove them. Refer to sections: 4.2 and 4.3

**EVE-PRO Purchase Portal**

**EVE-Learning Centre or Corporate Purchase Portal**

Step 4: Choose your preferred payment method. We currently support VISA, Mastercard, Bank/Wire transfer and PayPal.

Step 5: Complete the order form. If your license is for commercial/company use, you must select Company option.

Step 6: At the end please paste your license request content from Step 2 and Please read and confirm the EULA agreement, which contains vital information about licenses. For companies, if necessary, in the Order Notes you can add additional information/reference, e.g. for your accounting department.

Step 7: After a while (usually 10-30 mins), your license is sent to the E-Mail used in the order form.
Step 8: Copy Content of your received License

Step 9: On your EVE WEB GUI, click on License Upload,

Paste your licence and click on Upload
5  EVE-NG Professional Update & Upgrade

⚠️ Prerequisites: Internet access and working DNS on your EVE-NG is required.

5.1  EVE-NG Professional Update

It is strongly recommended to keep your EVE-NG up to date. To update and upgrade, SSH to your EVE CLI.

To verify your current EVE-NG version, please follow “CLI diagnostic information display commands” in section 15.1.1. You can verify your current EVE version from the System/System Status tab on the top menu of the WEB GUI as well.

The newest version of EVE-NG can be verified by checking the official website: http://www.eve-ng.net. The main page will display the latest EVE-NG version and correct steps to update.

Type the below commands followed by Enter

```bash
apt update
```

In case the prompt asks to confirm with Y/N, answer Yes.

5.2  EVE-NG Professional Upgrade

Type commands followed by Enter

```bash
apt upgrade
```
In case the prompt asks to confirm with Y/N, answer Yes.

After the completion of the update and upgrade, reboot your EVE Server. Type the following command and hit enter.

```bash
reboot
```

⚠️ **IMPORTANT NOTE:** Do NOT make EVE updates or upgrades from within the HTML5 Desktop console!
6 Types of EVE management consoles

**IMPORTANT NOTE:** EVE Console TCP ports. EVE Pro uses a dynamic port range between 1-65000. Dynamic means that every time you start a node on the lab, EVE assigns any free port from this range for Telnet, VNC or RDP access. Static TCP port assignment for Telnet sessions is not available in EVE PRO.

EVE Pro supports three different console types.

6.1 Native console

EVE Native console option requires locally installed software to access your lab nodes. To use the Native console option, you must have Administrator rights on your PC and ensure the TCP port range 1-65000 is not blocked by a firewall or antivirus software.

6.1.1 Native Console: telnet

**Windows OS:** You can use your preferred telnet program like Putty, SecureCRT or others. Example: Putty as native telnet client on Windows.
To setup Windows native telnet client please follow section 3.6.1

**Linux OS:** You can use your preferred telnet program like the Native Terminal, SecureCRT, or others.
Example: Telnet client from the native terminal on Linux Mint. To setup Linux native telnet client please follow section 3.6.2
MAC OSX: You can use your preferred telnet program like the native Terminal, SecureCRT, or others. Example: Telnet client from the native terminal on MAC OSX. To setup MAC OSX native telnet client please follow section 3.6.3

6.1.2 Native Console: Wireshark

EVE Professional has an integrated Wireshark Docker station. This allows live captures without having Wireshark installed on the client machine. The EVE Capture console uses an integrated RDP session.

Windows OS: Integrated Windows RDP for Wireshark capture
Example: Windows live interface capture.

To save the captured file on your local PC, please refer to section 12.1

Linux OS: Integrated RDP Session for Wireshark Capture

To save captured file on your local PC, please refer to section 12.1
6.1.3 Native Console: VNC

**Windows OS:** Recommended and tested is UltraVNC but any other compatible one can be used. Example: UltraVNC as Native VNC client on Windows. To setup Windows native VNC client please follow section 3.6.1

**Linux OS:** Remote Desktop Viewer for VNC Sessions. Example: Remote Desktop Viewer for VNC sessions on Linux Mint. To setup Linux native Remote Desktop Viewer please follow section 3.6.2

**MAC OSX:** Preferred VNC program: Chicken VNC Example: Chicken VNC as Native VNC client on MAC OSX. To setup MAC OSX native RDP Viewer client please follow section 3.6.3

6.1.4 Native Console: RDP

**Windows OS:** Windows Native RDP. Example: Windows RDP session to Win10 host in the lab.
Linux OS: Remote Desktop Viewer as RDP session to lab Win10 host. Example: RDP session to Win10 host in the lab. To setup Linux native Remote Desktop Viewer please follow section 3.6.2

MAC OS X: Remote Desktop Viewer as RDP session to lab Win10 host. Example: RDP session to Win10 host in the lab. To setup MAC OSX native RDP Viewer client please follow section 3.6.3

6.2 HTML5 console

The EVE PRO HTML5 console provides a clientless solution for managing labs and node sessions. Management is achieved directly through the browser by using the Apache Guacamole HTML5 Engine. It is very convenient for Corporate users with restricted Workstation permissions (Locked Telnet, vnc, rdp).
6.2.1 HTML5 Console: Telnet

HTML5 Telnet console is integrated and opens telnet sessions in the browser.

Option: The new Chrome clipboard extension allows the use of the copy/paste function inside the HTML session. This extension is available for the Chrome browser only.

https://chrome.google.com/webstore/detail/clipboard-permission-management/pbhneeapgleihlknhjaamobkceh?hl=en

6.2.2 HTML5 Console: Wireshark

Right click on the node you wish to capture, choose capture and the interface. Capture Session will open in a new browser window.

To save captured file to your local PC, please refer section 12.2
6.2.3 HTML5 Console: VNC

HTML5 VNC console is integrated and opens VNC sessions in the browser.

6.2.4 HTML5 Console: RDP

HTML5 RDP console is integrated and opens RDP sessions in the browser. For Windows 8, 10, Windows Server 2012, 2016 please mind the note below.

⚠️ IMPORTANT NOTE: For all nodes using Windows versions newer than Windows 7, the console type must be set to **RDP-TLS** in the node template. RDP-TLS node console option is actually only used with HTML5 RDP sessions.

Example below, Edit node, Win10, Console type rdp-tls.
6.3 HTML5 Desktop console

EVE PRO HTML5 Desktop provides a full-featured clientless solution for managing labs and node sessions. Management is achieved directly through the browser by using an integrated docker desktop that is accessed through the Apache Guacamole HTML5 Engine. The docker contains a full featured Linux desktop and is very convenient for corporate users with restricted workstation rights (locked telnet, vnc, rdp).

6.3.1 Login to HTML5 Desktop console

Step 1: On your first login to the EVE HTML5-Desktop console, EVE will open a new HTML window session to an integrated Docker management station. On the Desktop you will see another EVE login icon.
Step 2: Double-click the “Link to EVE | Login” icon and log into EVE using NATIVE console.

Inside of the integrated docker station, it will open another session to EVE. All features inside of the Docker Desktop will work as you are used to with the Native console.

6.3.2 HTML5 Desktop Console: telnet

The integrated management docker station telnet client allows you to telnet to nodes. Telnet sessions are in a tabbed style as shown below.
6.3.3 HTML5 Desktop Console: Wireshark

Right click on the node you wish to capture, choose capture and select the relevant interface. The capture will open in an RDP session window.

The integrated management docker station Wireshark client allows you to capture and save captured files onto the docker station. For instructions on how to save files to your local PC, please refer to section 12.3.

6.3.4 HTML5 Desktop Console: RDP

The integrated management docker station RDP client allows you to open Remote Desktop sessions to Windows nodes. For directions on how to transfer files to the local PC, please refer to section 13.

6.3.5 HTML5 Desktop Console: ThinClient Files exchange

The HTML5-Desktop console offers an amazing feature that allows you to exchange files between your host PC and the EVE management Linux host. Please refer to section 13 for detailed instructions.
7 EVE WEB GUI Management

7.1 EVE Management Page

The Main EVE management window

7.1.1 Management buttons

<table>
<thead>
<tr>
<th>Button</th>

</tr>
<tr>
<td>🕵️ System</td>
<td>System dropdown.</td>
</tr>
</tbody>
</table>
### 7.2 Folders and Lab files management

This section will explain how to manage folders and labs on the EVE management page.

#### 7.2.1 Folders Management

EVE Professional has three default folders used for various operations. These must not be deleted or renamed (see below).

- Admins can create additional folders for any user.
- Editors can create or manage folders in their own profile/folder or within the Shared folder

#### 7.2.1.1 Default folder Running

EVE professional allows a single user to run multiple labs and switch between them with the Running folder.
Example:
- Start a lab and close it
- Open and start another lab and close it

When you open your Running folder, you will see both running labs in it. It is easy to switch between labs.

The example below is showing two running labs in the Running folder.

7.2.1.2 Default folder Shared

To manage the Shared folder an Admin or Editor user account is required.

The EVE Professional Shared folder is visible to all EVE users. Admin and Editor Accounts can create folders or labs and place them into the Shared folder.

Example: An Admin creates a lab and places it into the Shared folder.

Step 1: Create a lab, refer to section 9.1

Step 2: Select the lab you wish to move to the Shared folder and press Move to (or create it in the Shared folder from the start).
Step 3: Another user account can use the lab placed by the Admin in the Shared folder

- **NOTE:** Every user has its own profile; this means that every user has an independent Running folder where this lab runs independently from other users.

- **NOTE:** Labs can be created and modified (e.g. settings and preconfigs) by an Admin or an Editor user. The User role can use the lab only exactly the way it was configured by an Admin or Editor and is unable to change any settings.

- **NOTE:** Admins and Editors can create folders and labs inside the Shared directory

### 7.2.1.3 Default folder Users

To manage the Users folder, an **Admin** user account is required.

The Users directory is a default EVE folder where Editors and Users have their personal folders stored.

Once an Admin has created a new Editor or User account, EVE will automatically create a folder with the user login name under the default directory Users.

**Example:** Below you can see the folders for the users with the following login names: **test2**, **test3** and **test4**
**NOTE:** An Admin can manage any user’s folder or place labs in it.

### 7.2.1.4 Create folder

An Admin or Editor user account is required.

Type the new folder name and click "Add Folder"

**NOTE:** Editors can only create folders within their own profile folder or in the Shared folder.

### 7.2.1.5 Delete folder

An Admin or Editor user account is required.

Select the folder you wish to delete and press Delete.

**NOTE:** All folder content will be deleted as well.

**NOTE:** Editors can only manage their own or the Shared folder

### 7.2.1.6 Move Folder

An Admin or Editor user account is required.

Select the folder you wish to move and press the Move to button.

**NOTE:** Editors can only manage their own or the Shared folder
Select the target destination for your folder and confirm by clicking on Move.

7.2.1.7 Export Folder

Select the folder(s) you wish to export from your EVE and press Export.

Save the exported file as .zip to your local PC. The exported zip file is ready to import to another EVE instance.

If your browser is set to save downloaded files to a default directory, your exported file will be saved in the browsers default downloads directory.

7.2.1.8 Import Folder

⚠️ IMPORTANT: Importable file MUST be in .zip format, do NOT unzip the file.

Step 1: Press the Import button.
Step 2: Choose the zipped file that contains EVE folders with labs.

Step 3: Press the Upload Button

Step 4: After you made sure your folder is imported and has all its content (labs), you can close the upload session.

7.2.2 Lab files Management

You can manage created labs from the main EVE file manager window
7.2.2.1 Create Lab

The Admin or Editor user account is required.

⚠️ NOTE: An Editor can create labs only within his personal folder or in the Shared folder

Click on the New Lab button and refer to section 9.1

7.2.2.2 Delete Lab

The Admin or Editor user account is required to delete labs.

⚠️ NOTE: An Editor can create labs only within his personal folder or in the Shared folder

Step 1: Select the lab or labs you wish to delete and then press the Delete button

7.2.2.3 Clone Lab

The Admin or Editor user account is required to clone labs.

⚠️ NOTE: An Editor can create labs only within his personal folder or in the Shared folder
The cloning feature provides a very convenient way to duplicate original labs to share with others or base another lab on it.

Cloned labs will copy exported configs (on supported nodes) but will not copy saved states/ configurations in Qemu nodes like Windows hosts, Cisco ISE, or other Qemu nodes that are not supported by the export config feature. Please refer to section 11.1 for more information on configuration export for labs.

Step 1: Select the lab you wish to clone and move the mouse pointer (blue) to that lab, an extra option will appear. Click on Clone.

Step 2: Your lab will be cloned with all your exported configurations or configuration sets with a new name.

Step 3: The lab has been cloned lab and can be renamed to your liking. Move the mouse pointer to the cloned lab and choose Rename.

Step 4: Rename it, and click OK to confirm

7.2.2.4 Move Lab

The Admin or Editor user account is required to move labs.

⚠️ NOTE: An Editor can create labs only within his personal folder or in the Shared folder

Step 1: Select the lab you wish to Move and move the mouse pointer (blue) to that lab, an extra option will appear. Choose Move to.
Step 2: Choose the path to the new destination and confirm by clicking Move

7.2.2.5 Export Lab

Select the Lab(s) you wish to export from your EVE Server and press Export.

Save exported file as .zip to your local PC. The exported zip file is ready to import into another EVE.

If your browser is set to save downloaded files to default directory, your exported file will be saved in the browsers default downloads directory.

7.2.2.6 Import Labs

⚠️ IMPORTANT: Importable file MUST be in .zip format, do NOT unzip the file.

Step 1: Press the Import button.
Step 2: Choose the zipped file which contains the EVE labs.

Step 3: Press the Upload Button

Step 4: After you made sure your lab is imported, you can close the upload session.
7.3 EVE Management Dropdown Menu

7.3.1 EVE User management

The User Management page, under the Management dropdown, will allow Admin accounts to manage other user accounts.

⚠️ Only the Admin role is allowed to create or edit user accounts.

7.3.1.1 Creating a new EVE User

Step 1: Open the User management submenu. Management>User management and click Add user.

Step 2: The Add New User management window will pop up. Fill in the main information about your EVE user.
Step 3: If you have bought other EVE licenses, you can choose the preferred user role. For licensing and user roles please refer to section 4.

![User Role Configuration](image)

Step 4: Set the access date and time From - to. If the fields are left empty (untouched), your user will have no time restrictions for accessing the EVE Server. Account validity with time settings is available for Editor and User roles only.

⚠️ Admin accounts have no time limit for account validity, and Account Validity time cannot be set.

![Account Validity](image)

Step 5: The POD number is a value assigned to user accounts automatically. POD numbers are like user profiles inside of EVE and are a unique value for every user. Think of PODs like a virtual rack of equipment for each user. Admins can assign a preferred number between 1-128. Please keep POD numbers unique between users!

Step 6: Press ADD

7.3.1.2 Edit EVE User

Step 1: Open the User management submenu. Management -> User management and choose which user you want to edit.

![User Management](image)

Step 2: The Edit user management window will pop up. Now you can edit necessary user information, roles, or access time. Confirm settings by pressing Edit at the bottom of the window.
7.3.1.3 User monitoring

There is a dropdown menu next to “Add User” called “More Info” that can provide additional information about your users. Click the checkbox next to the relevant information that you would like displayed. Additional columns will be added for each checkbox that is chosen.

7.3.2 EVE Node management

The Management dropdown has a submenu called “Node Management.” The Node management menu displays all currently running nodes within EVE. Within this menu, an Admin account can manage or even console to any user's nodes.
7.3.2.1 Node management actions

<table>
<thead>
<tr>
<th>Button</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>🗣️</td>
<td>Open a console session to the running node</td>
</tr>
<tr>
<td>🔴</td>
<td>Stop the running node</td>
</tr>
</tbody>
</table>

7.3.2.2 Node management filtering function

Each column in the Node Management Menu has a field that will allow you to filter the list to only display information related to the entered value.

**Example:** The Username column filters for **test4**

Each column can be sorted alphanumerically by clicking on the column name.

**Example:** click on the column Username and EVE will sort all running nodes in alphabetic order by username.
7.3.3 EVE Lab management

The Lab Management page, under the Management Dropdown, displays running labs for all users. In this menu an Admin account can manage or even open up any user’s running labs.

⚠️ NOTE: Editor and User accounts are able to see and open their own running labs only

⚠️ NOTE: Admin accounts are able to see, open, and join any users running lab.

7.3.3.1 Lab management actions

<table>
<thead>
<tr>
<th>Button</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>🕵️</td>
<td>Open the running lab</td>
</tr>
<tr>
<td>✖️</td>
<td>Stop the running lab</td>
</tr>
</tbody>
</table>

Once an admin has opened another user’s running lab, that user’s username will be displayed at the top of the left menu to help the admin keep track of which user’s lab was opened.

7.4 EVE System Dropdown menu

The EVE System dropdown contains the system utilization status, log files, and an option to stop all running nodes on the server.
7.4.1 System status

The System Status page, under the System Dropdown, will show EVE server resource utilization, the number of running nodes per template, current running versions of EVE and Qemu, and the current status of the UKSM and CPU Limit options.

UKSM – “Ultra KSM (kernel same-page merging) is a Linux kernel feature that allows the KVM hypervisor to share identical memory pages among different process or virtual machines on the same server.” It can be disabled globally for EVE on this page. It is recommended to keep UKSM enabled.

CPU Limit – CPU limit is used to limit CPU overloads during the nodes run time. It acts like a smart CPU usage option. If a running node reaches 80% CPU utilization, the CPU Limit feature throttles CPU use for this node to 50% until process usage drops under 30% for a period of 1 minute.

It is recommended to keep the Global CPU Limit option enabled.

CPU Limit can be turned for individual nodes in a lab. EVE node templates are set, by default, with the recommended CPU limit settings. An Unchecked CPU Limit option means that this node will boot without CPU limit.

Reference:

https://searchservervirtualization.techtarget.com/definition/KSM-kernel-samepage-merging
7.4.2 System logs

The System logs page, under the System Dropdown, will display EVE server log information.

In the menu you can select a specific log file for inspection.

7.4.3 Stop All Nodes

The Stop All Nodes option, under the System Dropdown, is an option that stops all running nodes on the EVE server. This option is accessible only by Admin users.

7.5 EVE Information Dropdown menu

The Eve Information Dropdown contains links to the EVE Website, EVE forum, EVE YouTube channel, and the web-based EVE Live Help chat.

To join the EVE Forum, in order to make posts or download materials, a forum user account must be created.

To join the EVE Live Chat for support, please use your Google account for access, or create a new user account for this chat. Please note the forum and live chat use separate user accounts.
7.6 EVE Licensing Dropdown menu

The EVE Licensing dropdown contains options for managing your EVE license.

The License Information Window will display the expiration date along with the number of licenses that have been activated.

License information display:

For License Request and License Upload, please refer to section 4.5 for more information.

7.7 Other Tab line info

Other items on the top menu are: Real-time clock, a shortcut to edit the currently logged in user, and a sign-out button.

7.8 Lab preview and global settings

Once you click on a lab in the folder tree, a main window on the right side will display schematic content of the lab as well as lab management options like open, edit, and delete.
7.8.1 Lab preview window

The lab preview window displays the schematic position of nodes and their connectivity. The Scale option allows you to change the lab preview size.

7.8.2 Lab preview buttons

In the lab preview, these buttons allow you to manage the selected lab.

<table>
<thead>
<tr>
<th>Button</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Open</td>
<td>Opens the Lab to the Topology Canvas</td>
</tr>
<tr>
<td>Edit</td>
<td>Opens the Labs Global Settings. Refer to section 7.8.4 for more info.</td>
</tr>
<tr>
<td>Delete</td>
<td>Deletes the lab</td>
</tr>
</tbody>
</table>

7.8.3 Lab preview information

Description, version, UUID etc.

```
Lab Path: test_lab1.ini
Version: 12
UUID: 95623554-8e3b-4368-ab66-64f9b4033bf6
Author: John Tester
```
7.8.4 Lab Global Settings

Lab Global Settings Page is opened when you click on the preview window or from the Topology page Side bar:

This page allows you to fill out important information about the lab. The red numbers in the picture correlate with the numbers listed below

1. Lab name.

2. Version: Version numbers allow a lab author to assign a value to a unique state of a lab. Increase the number to correspond to new developments in the lab. If left unfilled, EVE will assign a value of 1 automatically.

3. Author: You can add a lab author name in this field

4. Config Script Timeout: It is the value in seconds used for the “Configuration Export” and “Boot from exported configs” operations. Refer to section 11.1 for more information.

5. Lab Countdown Timer: It is the value in seconds to provide a time limit (countdown timer) for completing a lab. Refer to section 11.4 for more information.

6. Description: In the Description field you can write a short description of the lab.

7. Tasks: In the Tasks field you can write the task for your lab.

The Lab details window can be opened from the Topology Canvas page sidebar during labbing, to read the Tasks for the lab.
TEST_LAB1

Here are tasks for your lab. Task 1: Please configure routers with IP addressing. Task 2: Configure OSPF BGP routing on all routers. Task 3: Configure routes to receive DHCP IP address.
8 EVE WEB Topology page

Once you open a lab, the topology page for that lab will open.

8.1 Side bar functions

Move your mouse pointer over to the left on top of the minimized sidebar to expand the interactive sidebar as shown in below screenshot

8.1.1 Add an object

The “Add an object” menu can be accessed in two different ways, from the sidebar and by right-clicking on the Topology Page
8.1.1.1 Node object

The Node object opens the “Add a new node” window. Only nodes that appear blue in the dropdown menu can be added. A grey image name signifies that you have not yet properly uploaded an image to the proper folder. A blue image name means that at least one image exists in the proper folder for this template.

8.1.1.2 Network object

The Network object opens the “Add a new network” window. This function is used to add any kind of network (Cloud, Bridge or NAT). For details on these, please refer to section 10.
8.1.1.3 Picture object

The picture object opens the “Add Picture” window and allows you to upload custom topologies in jpg or png format. After uploading, you can edit these pictures and map selected areas to nodes from the topology to use your own designs as a lab topology from which you can directly connect to the nodes. For details, refer to section 11.3.

8.1.1.4 Custom shape object

The Custom shape object allows you to add shape elements onto the topology; these currently include squares and circles. For details, refer to section 11.2.
8.1.1.5  Text object

The Text object allows you to add text elements onto the topology. For details, refer to section 11.2

8.1.2  Nodes

The Nodes object in the sidebar opens the “Configured Nodes” window.

In this window, you can make changes for nodes that are on the lab topology. More options can be found in the detailed node specific menu, for details refer to section 9.1.2.

**NOTE:** Running nodes are highlighted in Blue, their settings cannot be changed. You can only change settings of nodes that are not currently running.

You can change the following values:

- Node Name
- Boot image
- Number of CPUs for the node
- Enable or disable CPU Limit (Refer to section 7.4.1)
- IDLE PC for Dynamips node
- NVRAM in Kbyte
- RAM in Mbyte
• Ethernet quantity. **NOTE:** The Node must be disconnected from any other nodes to make this change. You cannot change the interface quantity if the node is connected to any other node.

• Serial interface quantity, IOL nodes only. You cannot change Serial interface quantity if the node is connected to any other node.

• Type of Console

• Node Icon that appears on the Topology

• Startup configuration to boot from

**Actions Buttons:**

- **Start node**
- **Stop node**
- **Wipe node**
- **Export the nodes config**
- **Networks**
- **Edit node**
- **Delete Node**

### 8.1.3 Networks

The Networks object in the sidebar will open the “Configured Networks” window.

The “Configured Networks” window will only show networks that were specifically added to the topology; it will not show node interconnections. The example below is showing information for networks on the Topology. For Cloud networks and how to connect EVE labs to a network external to EVE, please refer to section 10
8.1.4 Startup-configs

The Startup-configs object in the sidebar opens the “Startup-configs” window.

This window will show you startup-config for each node (for PRO it shows the startup configs of the current config set) and if the node is set to boot from it (ON) or not (OFF).

The “Startup-configs” window in the EVE Professional version contains additional features, please refer to section 11.1.

8.1.5 Pictures

**NOTE**: The Pictures object will only appear in the sidebar after you have uploaded a custom topology picture to the lab EVE lab (Please refer to section 8.1.1.3). The Pictures object in the sidebar opens the “Picture Management” window.
For details on the Picture / custom topology feature, refer to section 11.3

8.1.6 Configured Objects

The “Configured Objects” window will display a list of all objects that are added onto the topology. For details on different objects, refer to section 11.2

NOTE: You will not see any objects in this window if none have been added to the lab yet.

8.1.7 More actions

The More actions menu in the sidebar has a submenu with the following functions.

8.1.7.1 Start all nodes

The “Start all nodes” action will start all nodes on your topology, taking the (configurable) startup delay of each node into consideration.

IMPORTANT. Starting many nodes at once can seriously spike your CPU utilization. Please make sure that you are not using the “Start all nodes” option for heavy labs or that you have configured a proper delay between the nodes. For heavy nodes and large quantities, it is recommended to start them in smaller groups, wait for them to finish booting and then start another small group of nodes.

8.1.7.2 Stop all nodes

Stopping all nodes will power off all nodes on your topology.

NOTE: It is recommended to save your (running) configurations on the nodes in your lab before you stop the lab if you want to continue where you left off the next time. Stopping the nodes will leave the images in a temporary folder and will take up space on your drive until they have been wiped.
8.1.7.3 Wipe all nodes

The “Wipe all nodes” action will wipe the NVRAM or currently saved image of all your nodes in the current lab.

Example: You have saved the nodes configuration by saving the running configuration to the startup configuration. The Wipe command will delete the saved NVRAM startup configuration and on the next boot it will boot from factory defaults.

The same applies to images without configurations, e.g. a linux node. If you make modifications to the system and afterwards wipe this node, the next time it will boot from the original base image again as the modified image was deleted.

The “Wipe node” action is commonly used with initial startup configuration modifications. The Wipe node action does not delete configured startup configurations or sets. Please refer to section 11.1

8.1.7.4 Console to All Nodes

“Console to all nodes” will open a console to all of your running nodes in the current lab. This includes all different kinds of configured console types for lab nodes like VNC, Telnet and RDP.

8.1.7.5 Export all CFGs

The “Export all configurations” action will export current configs to the EVE startup-configs.

Export configurations are supported for:

<table>
<thead>
<tr>
<th>Cisco Dynamips all nodes</th>
<th>Juniper VRR</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cisco IOL (IOS on Linux)</td>
<td>Juniper VMX</td>
</tr>
<tr>
<td>Cisco ASA</td>
<td>Juniper vMX-NG</td>
</tr>
<tr>
<td>Cisco ASA v</td>
<td>Juniper vQFX</td>
</tr>
<tr>
<td>Cisco CSR1000v</td>
<td>Juniper vSRX</td>
</tr>
<tr>
<td>Cisco Nexus 9K</td>
<td>Juniper vSRX-NG</td>
</tr>
<tr>
<td>Cisco Nexus Titanium</td>
<td>Mikrotik</td>
</tr>
<tr>
<td>Cisco vIOS L3</td>
<td>PFsense FW</td>
</tr>
<tr>
<td>Cisco vIOS L2</td>
<td>Timos Alcatel</td>
</tr>
<tr>
<td>Cisco XRv</td>
<td>vEOS Arista</td>
</tr>
<tr>
<td>Cisco XRv9K</td>
<td></td>
</tr>
</tbody>
</table>

For a full explanation of exporting configurations, please refer to section 11.1

8.1.7.6 Edit lab

Opens the Edit lab window. Refer to section: 0
8.1.7.7 Set node’s startup-cfg to default configset

- Set nodes startup-cfg to default configset

Sets nodes to the default startup-config. NOTE: If you have nothing saved in the default config set for any node, that node will boot from factory default instead. This is commonly used with the wipe nodes function so the node will boot from the configured startup-config on next boot and not from the startup-config in its NVRAM in case the node was started before already.

Please refer to section 11.1

8.1.7.8 Set node’s startup-cfg to none

- Set nodes startup-cfg to none

Setting all lab nodes to boot from factory default. Used commonly with the wipe nodes function. The example below shows the steps to set a lab to boot from factory default.

Step 1: Wipe all nodes
Step 2: Set all nodes to startup-cfg none

Please refer to section 11.1

8.1.7.9 Delete default startup-cfgs

- Delete default startup-cfgs

**WARNING:** this action will delete all configurations saved to your saved default config set. Please make sure that is what you want to do before you execute this.

8.1.8 Refresh Topology

- Refresh topology

Sometimes it is necessary to refresh the topology if many objects are added on the topology.

8.1.9 Lab page zoom/unzoom

- Zoom

This action is used to zoom or unzoom a large topology in EVE.
8.1.10 Status

Status
Opens the EVE Status window.
Especially useful while working with labs to monitor your EVE’s resource utilization. It shows EVEs CPU, RAM and disk utilization in real time. You can also see the number of running nodes per node type. For details on UKSM and CPU Limit, please refer to section 7.4.1.

8.1.11 Lab details

Lab details display information about a lab, its UUID, description and lab tasks. To edit the lab description and lab tasks, please refer to section 0 and 8.1.7.6.
8.1.12 Close lab

Closes the lab topology. The lab can be closed while the nodes in the lab are still running as well. It will appear as running lab under the Running folder. Please refer to section 7.2.1.1

8.1.13 Lock Lab

“Lock Lab” disables some of the functions on the lab topology. If the lab is locked, you cannot move any node or object nor edit any node settings. Basically, the whole lab will be in read-only mode except for the lab settings itself, which you can still edit as Administrator or Editor from the main menu. The Lock Lab function is also used in conjunction with the countdown timer function, for details on this please refer to section 11.4

<table>
<thead>
<tr>
<th>Lock Lab</th>
<th>Unlock Lab</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lab is unlocked and all operations are working</td>
<td>Lab is locked, limited operations permitted.</td>
</tr>
</tbody>
</table>

To unlock a Lab, simply press on the red “Unlock Lab” button with an Administrator or Editor account.

8.1.14 Logout

Log out from the EVE WEB GUI session. Please refer to section 7.7

8.2 EVE Lab topology menus

Right-clicking within the EVE topology can open new menus with various functions and options for managing nodes.

8.2.1 Lab topology menu

Right-clicking on the (free/unused) canvas of the EVE topology opens a new menu. (Add-) Node, Network, Picture, Custom Shape and Text are the same functions referred to in section 8.1.1.

Auto Align. This function will help align objects on the topology. The lab creator does not need to worry about small displacements of objects. AutoAlign will align all objects to a virtual grid with a single click and can make neatly arranged labs look even neater.
8.2.2 Connection menu

Right-clicking on the connection between nodes allows you to delete this connection.

8.2.3 Cloud or Bridge network menu

Right-clicking on a Cloud or Bridge network allows you to edit or delete it.

If you have chosen Edit, the Network edit window will open a window where you can change the placement, network type or name/prefix.

For details on how to operate EVE Cloud networks and external connections, please refer to section 10.
8.2.4 Stopped node menu

Right-clicking on a stopped node also opens a menu:

- **Start node**: This will start the selected node in this lab.
- **Wipe node**: Wiping a node will erase the NVRAM (running config) or the temporary image snapshot depending on the type of node. This option is used to clean up a node in order to boot it from factory defaults or a custom set of configurations.
- **Edit node**: Opens the Edit node window (picture on the right). For details please refer to section 9.1.2
- **Delete node**: Deletes the node from the lab. It is recommended to disconnect (delete connections to it) the node before you delete it.

8.2.5 Running node menu

Right-clicking on a running node also opens a menu:
Stop. Blue arrow: clicking on Stop will stop the node depending on the method the node supports (power off / shutdown are auto-selected based on the template)

Stop menu. Red arrows: There are more options to stop a node, clicking on the chevron on the left side of “Stop” opens a submenu.

- **Shutdown**: Perform an orderly shutdown of the node if that node supports it (shutdown signal is sent down to the node)
- **Power off**: Kills the running node’s process within EVE (hard poweroff).
- **Hibernate**: Save Node state (Disk and Memory are saved in an internal snapshot). Used for fast boot of a node. The hibernation process can take some time. Once the hibernation process is completed, the node will turn grey (shutdown state).

**Wipe node**: Wiping a node will erase the NVRAM (running config) or the temporary image snapshot depending on the type of node. This option is used to clean up a node in order to boot it from factory defaults or a custom set of configurations.

**Export CFG**: This function is used to export the saved running configuration to the EVE startup configuration sets. Reference section 11.1

**Capture**: Integrated live Wireshark capture. Select the interface which you wish to capture. Reference section 12

**8.2.6 Selected nodes menu and features**

It is possible to select many objects or nodes at once in EVE. Using your mouse, you can select an area which will cover your nodes and/or you can click on nodes while holding the CTRL key on your keyboard.

A right-click on any of the selected nodes opens a group menu:
Start Selected: This will start the selected nodes in this lab.

Stop Selected: This will stop the selected nodes in this lab

Wipe Selected: The Wipe Selected nodes action will wipe the NVRAM or currently saved image of the selected nodes in the current lab.

Example: You have saved the nodes configuration by saving the running configuration to the startup configuration. The Wipe command will delete the saved NVRAM startup configuration and on the next boot it will boot from factory defaults.

The same applies to images without configurations, e.g. a linux node. If you make modifications to the system and afterwards wipe this node, the next time it will boot from the original base image again as the modified image was deleted.

The Wipe node action is commonly used with initial startup configuration modifications. The Wipe node action does not delete configured startup configurations or sets. Please refer to section 11.1

Console To Selected Nodes: Console To Selected Nodes will open a console to all selected running nodes in the current lab. This includes all different kinds of configured console types for lab nodes like VNC, Telnet and RDP

Export all CFGs: The Export all configurations action will export current configs of selected nodes to the EVE startup-configs.

For a full explanation of exporting configurations, please refer to section 11.1

Set nodes startup-cfg to default configset: Sets nodes to Default startup config, used commonly with the wipe nodes function. NOTE: If you have nothing saved in the default config set for any node, that node will boot from factory default instead. This is commonly used with the wipe nodes function so the node will boot from the configured startup-config on next boot and not from the startup-config in its NVRAM in case the node was started before already.

Please refer to section 11.1
Set nodes startup-cfg to none. Setting selected lab nodes to boot from factory default. Used commonly with the wipe nodes function. The example below shows the steps to set selected nodes to boot from factory default.

Step 1: Wipe selected nodes
Step 2: Set nodes startup-cfg to none

Please refer to section 11.1

Horizontal Align. Aligns the selected nodes in one horizontal line.

Step 1: Select the nodes you wish to align.
Step 2: Right click on one of the selected nodes and choose Horizontal align, this will align all nodes to the selected node.

Picture before:

![Picture before](image1)

Picture after:

![Picture after](image2)

Vertical Align: Aligns the nodes in one vertical line.

Step 1: Select the nodes you wish to align.
Step 2: Right click on one of the selected nodes and choose Vertical align, this will align all nodes to the selected node.

Picture before  Picture after
**Circular Align**: Aligns the nodes in a circle.

**Step 1**: Select the nodes you wish to align.

**Step 2**: Right click on one of the selected nodes and choose Circular Align, this will align all nodes in a circle, the midpoint of the circle will be at the coordinates the selected node was at before.

**Delete nodes startup-config.**

⚠️ **WARNING**, this action will delete the configurations of the selected nodes that are saved to your Default config set. Please make sure that is what you want to do before you execute this.

**Delete selected**: This will delete the selected nodes from your current lab.

Selected nodes can be moved as a group across the topology.

Example: You can select nodes and objects to better position them on the Topology.
8.3 EVE Lab node states and symbols

8.3.1 Stopped (non-running) nodes

Grey color and a square symbol below a node means that the node is stopped and not running. Once you will start it, the node will change to one of the running states below.

A grey node with an exclamation mark inside a triangle below the node means that there was a problem during the boot process, this could be a corrupted boot image, insufficient resources or problems with the initial configuration. A node in this state cannot be started again.

Workaround: Right-click on the node and wipe it, the symbol will then change to a grey color with a square symbol below it. Then edit the node and make sure you have configured sufficient resources and the correct settings for this node, if it has startup-configs you can check them as well. Afterwards start the node again.

8.3.2 Running nodes

The blue color and black Play triangle symbol means that the node is started and running, the node is in a working/functional state.

A running node with a clock symbol below the node means that the node is waiting to finish loading from the set exported/startup configuration. Once the configuration has been successfully applied, the node symbol will change to a Play triangle symbol. If the node has finished booting but the clock symbol does not change to the Play triangle symbol, the problem could be in the uploaded startup configuration. For how to use exported configurations and boot nodes from them, please refer to section 11.1

A running node with a turning red gear symbol means that the node is either in the process of hibernating the node or it has sent the shutdown signal to the node and is waiting for it to turn off. Once this process has successfully finished, the symbol will turn into a grey node with a black square symbol below it (stopped state).
NOTE: If the node does not support a system shutdown or does not recognize the shutdown signal (example: Cisco router), after clicking on Shutdown, the node can stay with a turning red gear symbol below it indefinitely. **Workaround:** Use Stop or Stop/PowerOff to stop the node.

Example nodes where Stop/Shutdown is supported: Microsoft Windows and most Linux nodes as well as a lot of appliances based on Linux.

### 8.3.3 Node connector symbol

Connector symbol: If you move your mouse pointer on top of a running or stopped node, an orange connector symbol appears. It is used to connect nodes on the topology in a drag and drop style. Drag the symbol from one node and release the mouse pointer on the second node. A new window will appear where you can select the interfaces the link should connect to.

### 8.4 Other

#### 8.4.1 Notification area

The Notification area in the top right is displaying informational or error messages.
9 Working with EVE labs

⚠️ IMPORTANT NOTE: You must prepare and upload at least a couple of images to start building your labs. Refer to section 16

9.1 Creating a lab

Step 1: Click Add new lab. For more information on creating new labs, please refer to section 7.2.2.1

Step 2:

Fill out the lab information. Name and Version are required fields. Next hit Save. Refer to section 0 for more information about the different fields in the Edit lab window.

9.1.1 Adding nodes to the lab

The new Topology page will open. There are two different ways to add nodes to the topology canvas:

Step 1: Object/Add Node

- Left Side Bar > Add object > node. Refer to section 8.1.1.1 for more information.
- Right click on a free area of the topology page and click on “Node” to add a new node. Refer to section 8.2.1 for more information.
Step 2: The Add new node window will appear. You can scroll down to choose which node you wish to add to the lab topology, or you can type the node name to filter through the node list.

⚠️ **NOTE:** It will only be possible to select and add nodes that have images preloaded in EVE. These nodes will be displayed in a blue font. To prepare images for EVE, refer to section 16.2
Step 3: Edit Add add a new node settings. Please refer to the picture and table below.

### ADD A NEW NODE

<table>
<thead>
<tr>
<th>Template</th>
<th>Number of nodes to add</th>
<th>Image</th>
<th>Name/prefix</th>
<th>Icon</th>
<th>UUID</th>
<th>CPU Limit</th>
<th>RAM (MB)</th>
<th>Ethernets</th>
<th>QEMU Version</th>
<th>QEMU Arch</th>
<th>QEMU Nic</th>
<th>Startup configuration</th>
<th>Delay (s)</th>
<th>Console</th>
<th>Left</th>
<th>Top</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cisco CSR 1000V</td>
<td>1</td>
<td>CSR1000v-universal:9.03.17.04.5.156-1.54-</td>
<td>1</td>
<td></td>
<td></td>
<td></td>
<td>3072</td>
<td>4</td>
<td>tpi(0:12.0)</td>
<td>tpi(i86_64)</td>
<td>tpi(e1000)</td>
<td>None</td>
<td>0</td>
<td>telnet</td>
<td>839</td>
<td>210</td>
</tr>
</tbody>
</table>
9.1.1.1 Node values Table

<table>
<thead>
<tr>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td><strong>ADD A NEW NODE</strong> Template menu. Choose which node template to add to the topology.</td>
</tr>
<tr>
<td>2.</td>
<td>Number of nodes to add</td>
</tr>
<tr>
<td>3.</td>
<td>Image</td>
</tr>
<tr>
<td>4.</td>
<td>Name/Prefix</td>
</tr>
<tr>
<td>5.</td>
<td>Icon</td>
</tr>
<tr>
<td>6.</td>
<td>UUID</td>
</tr>
</tbody>
</table>

**Example.** We are adding 5 CSR nodes with the name R. On the topology they will appear as R1, R2, R3, R4, R5. Later using the the Nodes window, you can edit the node names per your needs. Refer to section 8.1.2 or edit the node individually, refer to section 9.1.2.
| 7. | **CPU Limit** | CPU limit per node. This option is already set (checked/unchecked) per EVE recommendations. Refer to section 7.4.1 |
| 8. | **CPU** | Each node template has a pre-set CPU value that aligns with vendor requirements. This value can be changed per your needs. |
| 9. | **RAM (MB)** | Each node template has a pre-set RAM value that aligns with vendor requirements. This value is displayed in MB and may be changed per your needs. |
| 10. | **Ethemet** | The number of ethernet interfaces. **NOTE for IOL nodes:** Ethernet interfaces for IOL nodes are placed into groups of 4. A value of 1 for Ethernet means your node will have 4 interfaces. The serial interface option is available for IOL nodes only and follows the same grouping structure as ethernet interfaces. A value of 1 for Serial means your node will have 4 serial interfaces. |
| 11. | **QEMU Version** | EVE will pre-set the best recommended QEMU version for each node template. This value can be changed per your needs. |
| 12. | **QEMU Arch** | Qemu architecture is pre-set per image vendor recommendations. This value can be changed per your needs |
| 13. | **QEMU Nic** | Type of Qemu NIC is pre-set per image vendor recommendations. This value can be changed per your needs. |
### EVE-ng Professional Cookbook

#### 14. QEMU custom options

Qemu custom options are pre-set per image vendor recommendations. This value can be changed per your needs.

<table>
<thead>
<tr>
<th>QEMU custom options</th>
</tr>
</thead>
<tbody>
<tr>
<td>machine type=pc, fullscreen=-q, resume=0, console=vt100, nographic=-r</td>
</tr>
</tbody>
</table>

#### 15. Startup configuration

Startup configuration: Value can be changed to set your node to boot from saved configurations. Refer to section 11.1 for more details.

<table>
<thead>
<tr>
<th>Startup configuration</th>
</tr>
</thead>
<tbody>
<tr>
<td>None</td>
</tr>
</tbody>
</table>

#### 16. Delay (s)

The Delay value is set in seconds and can be used to delay a node from booting after it is started. Example: if the value is set to 30, the node will wait 30 seconds before processing its boot sequence. This feature is useful in conjunction with the “Start all nodes” function if your lab requires certain nodes to start up before others or to avoid a mass-start of very heavy nodes.

<table>
<thead>
<tr>
<th>Delay (s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
</tr>
</tbody>
</table>

#### 17. Console

Console types for each template are pre-set with recommended settings.

<table>
<thead>
<tr>
<th>Console</th>
</tr>
</thead>
<tbody>
<tr>
<td>telnet</td>
</tr>
</tbody>
</table>

The setting can be changed per your needs.

**NOTE:** The Docker template contains a wide variety of images, therefore, please refer to section 14.1.3 for recommended console types for each docker image. Windows nodes can use either RDP or VNC but RDP needs to be enabled in Windows itself.

#### 18. First Eth MAC Address

OPTIONAL: Templates for Cisco FirePower, F5, Linux, and Citrix have the option to manually set the MAC address for the first ethernet interface. This will enable the use of licenses that are tied to a particular MAC address.

<table>
<thead>
<tr>
<th>First Eth MAC Address</th>
</tr>
</thead>
</table>

MAC Address format must be like: 00:50:0a:00:0b:00

### 9.1.2 Edit node

EVE provides two ways to edit nodes after being added to the topology canvas.

**NOTE:** A node must be wiped each time an image or startup configuration has been changed.
9.1.2.1 Edit nodes globally

From the Topology page. Click “Nodes” from the left sidebar to bring up the nodes list. Refer to section 8.1.2 for more details.

9.1.2.2 Edit node individually.

Right click on the node and click Edit

The “Edit node” window will appear. It is very similar to the window that is displayed when you add a new node. To change values for the node, refer to the nodes value table in section 9.1.1.1.
9.1.3 Wipe Node

The "Wipe node" function will clear the NVRAM of the node. Each time a node setting is changed (CPU, RAM, boot image or startup configuration) a wipe must be issued on that node. For more information refer to section 11.1
9.1.4 Interconnecting nodes

To connect nodes on the lab, use the drag and drop style method

Connector symbol: Moving the mouse over a node will make an orange male plug appear. The male plug is used to connect nodes on the topology, drag and drop style. Release the mouse pointer on the second node.

The connection window will appear. Choose the interface you want to use to interconnect the nodes. Click Save when finished.

9.1.5 Delete connection between nodes

To delete a connection, right click on it and hit “Delete.”

9.1.6 Delete Node

To delete a node, right click it and hit “Delete.” This is a non-reversible function

NOTE: It is strongly recommended to delete connections from a node before deleting the node itself.
9.2 Running labs

9.2.1 Starting lab

Nodes inside a lab may be started individually, in groups, or all at once.

The Start all nodes option will start all nodes on your topology.

⚠️ IMPORTANT. Starting all the nodes at once can result in major spikes in CPU utilization. Please make sure you are not using the “Start all nodes” option for heavy labs. Instead, it is recommended to start nodes in small groups.

Starting a node or group of nodes:

Right click on single node or node group and hit “Start.”

Running nodes will turn blue. Refer to section 8.3 for node states.
9.2.2 Interconnecting running nodes (hotlinks)

Eve Professional offers the hotlinks feature which allows you to interconnect node in the running state.

Connector symbol. Moving the mouse over a node will make an orange male plug appear. The male plug is used to connect nodes on the topology, drag and drop style. Release the mouse pointer on the second node

9.3 Saving labs

To save a running lab, refer to the vendor recommended save commands for each node.

Example:
Cisco: “copy run start”
Juniper “commit”

Your current work will be saved in the nodes’ NVRAM and the lab can be stopped safely. Starting the lab again will allow you to pick up from where you left off.

⚠️ WARNING: Using the wipe action on a node will clear its NVRAM. This is similar to doing a factory reset on a device.

The configurations of nodes can be exported and used as initial or startup configurations for your labs. To export configurations and configuration sets for labs refer to section 11.1

9.4 Stopping labs

The Stop all nodes option will stop all nodes on your topology.

NOTE: It is recommended to save your running configurations before you stop your nodes.

Stopping a node or group of nodes:

Right click on single node or node group and hit “Stop.”

For individual node Stop options refer to section 8.2.5
9.5 Start saved lab

Select the lab you want to start and click "Open"

9.6 Working with multiple running labs

Refer to section 7.2.1.1

9.7 Importing labs

Refer to section 7.2.2.6

9.8 Exporting labs

Refer to section 7.2.2.5

9.9 Deleting labs

Refer to section 7.2.2.2

9.10 Moving labs

Refer to section 7.2.2.4
10 EVE Clouds and Networks

10.1 Bridge Network

The EVE Bridge interface acts like an unmanaged Switch. It supports passing along tagged dot1q packets.

**Example:** We have to connect many nodes in a flat (dot1q) network

Step 1: Add a Bridge Network onto the topology. There are two ways to do this: Right-clicking on the topology area and selecting “Add Network” or in the sidebar click “Add an Object” and then select “Network.” Please refer to sections 8.2.3 and 8.1.1.2

![Add a new object interface]

Step 2: Name/prefix can be changed in order to rename your Bridge network. Make sure your network type is set to bridge.

![ADD A NEW NETWORK interface]

Step 3: Connect your nodes using the drag and drop connector. Refer to sections 9.1.4 and 8.2.3

![Node connection diagram]
10.2  NAT Network

EVE-NG PRO has an embedded NAT interface with the subnet 172.29.129.0/24. This feature is similar to the VMWare NAT interface, but EVE is translating the 172.29.129.0/24 (this subnet is hardcoded in EVE and is not configurable) subnet to EVE’s management interface pnet0.

To add a NAT Cloud onto the EVE topology:

Step 1: Add A New Network onto the topology. There are two ways to do this: Right-clicking on topology area and selecting “Network” or in the sidebar, “Add an Object” and then select “Network.”

Step 2: Name/prefix can be changed in order to rename your NAT network. Make sure your network type is set to NAT.

Step 3: Connect your nodes using the drag and drop connector. Refer to sections 9.1.4 and 8.2.3

If your EVE management is connected to the Internet, adding a NAT cloud onto the EVE lab enables you to have internet access from within your EVE lab using NAT.

EVE NAT Gateway IP is:
172.29.129.254/24

DHCP is enabled on the EVE NAT Cloud.

10.3  Management Cloud0 interface

EVE management interface is also known as the Cloud0 network for labs. The Cloud0 interface is bridged with your EVEs first NIC. “Cloud” is used as an alias to pnet. Pnet is the bridge interface name inside of EVE.

Cloud0 is commonly used inside EVE labs to get management access to nodes running inside EVE from a host machine external to EVE.
**IMPORTANT NOTE:** For EVE VMs running on ESXi, make sure your management interface bridged with the vSwitch (Port group) has the security settings for Promiscuous Mode set to Accept. Any port group or vSwitch used to connect an external network to an EVE Cloud network needs to have the Promiscuous mode set to “Accept”!

### vSwitch Settings

<table>
<thead>
<tr>
<th>MTU</th>
<th>1500</th>
</tr>
</thead>
<tbody>
<tr>
<td>Uplink 1</td>
<td>vsnet1</td>
</tr>
<tr>
<td><strong>Link discovery</strong></td>
<td>Click to expand</td>
</tr>
<tr>
<td><strong>Security</strong></td>
<td></td>
</tr>
<tr>
<td>Promiscuous mode</td>
<td>Accept</td>
</tr>
<tr>
<td>MAC address changes</td>
<td>Accept</td>
</tr>
<tr>
<td>Forged/translits</td>
<td>Accept</td>
</tr>
<tr>
<td><strong>NIC learning</strong></td>

</tr>
</tbody>
</table>

### Portgroup Settings

**EVE Cloud0 bridging table.**

<table>
<thead>
<tr>
<th>Lab name</th>
<th>EVE interface name (inside)</th>
<th>Type</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cloud0</td>
<td>pnet0</td>
<td>Bridged</td>
<td>Cloud0/pnet0 is bridged with your primary EVE ethernet port. It is assigned a</td>
</tr>
</tbody>
</table>
management IP address used for WEB GUI access. The EVE management subnet can be used as a management network in labs.

⚠️ **Question:** How can I obtain my Cloud0 subnet and gateway IP. Many EVE VMs only have a DHCP address assigned on the pnet0 interface.

**Answer:** SSH to EVE and type the following from the CLI:

```
rout```

```
Example: We want to use Cloud0 as a management network for an ASAv node in an EVE lab. From the above-obtained information, we know that our Cloud management subnet is 192.168.90.0 with a mask of 255.255.255.0 and the Gateway IP is 192.168.90.1.

Step 1: Add A New Network onto the topology. There are two ways to do this: Right-clicking on topology area and selecting “Network” or in the sidebar, “Add an Object” and then select “Network.”

Step 2: Name/prefix can be changed in order to rename your Cloud0 network. Make sure your network type is set to Management(Cloud0).

Step 3: Connect your ASAv using the drag and drop connector to the Cloud0 network. Refer to sections 9.1.4 and 8.2.3

Step 4: Start the node and configure the interface connected to Cloud0 with an IP address from the management subnet (192.168.90.0/24 in this example). Make sure you do not assign duplicate IPs.
NOTE: Cloud interfaces can be used to connect multiple nodes to a single cloud instance on the topology.

10.4 Other cloud interfaces

Other cloud interfaces can be used to extend a lab connection inside of EVE or bridged with other EVE interfaces to connect external networks or devices.

**EVE Cloud bridging table.**

<table>
<thead>
<tr>
<th>Lab cloud name</th>
<th>EVE interface name (inside)</th>
<th>Type</th>
<th>ESXi VM corresponding interface</th>
<th>VMware Workstation corresponding interface</th>
<th>Bare HW Server</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cloud0</td>
<td>Pnet0</td>
<td>bridged</td>
<td>Network adapter 1</td>
<td>Network Adapter</td>
<td>First ethernet Eth0</td>
<td>Cloud0/pnet0 is bridged with your primary EVE ethernet port. It is assigned a management IP address used for WEB GUI access. The EVE management subnet can be used as</td>
</tr>
</tbody>
</table>
**Example**: Cloud7 network is used as an extended connector between nodes:

**Step 1**: Add two Cloud7 networks onto the topology.

**Step 2**: Connect your lab nodes to Cloud7. Your configured nodes will work like being connected to the same switch (or the same bridge in EVE). Even CDP works. It is convenient if it is necessary to have connections across the lab and you don’t want to have connections going from one end of the lab to the other.
If some of the clouds (e.g. Cloud1) are bridged to another ethernet (VMnet) you can connect your EVE lab to an external VM or physical device (like e.g. a switch, IP phone or access point).

⚠️ For ESXi make sure that you have set Promiscuous mode security settings on the vSwitch and Port group to Accept. Please refer to section 10.3

The next sections will explain how you can use Cloud networks in EVE to connect to other external (e.g. VMWare) VMs or physical devices.

10.5 Connecting external VM machines to the EVE Lab

10.5.1 ESXi VM machines

External ESXi VM machines can be connected to EVE labs using cloud interfaces.

⚠️ NOTE: A single Cloud interface can be used to connect more than one external VM to the EVE lab.

Example: Connecting a Web Security Appliance (WSA) to the lab using the Cloud1 interface.

Step 1: Create a new or use an existing portgroup on your ESXi and assign it to EVE and WSA VMs as shown below. Make sure you have set Promiscuous mode on the vSwitch (portgroup WSA-MGMT) to Accept.

⚠️ NOTE: VM machines must be in a powered off state to assign network interfaces.

Portgroup WSA-MGMT (with vSwitch5 as parent) settings:
Parent vSwitch5 settings:

**vSwitch5**

<table>

---

**EVE Lab connected to the WSA (Cloud1)**

- **NOTE:** ESXi WSA VM obtained the IP 192.168.10.3 from the DHCP pool on the lab switch. The gateway is 192.168.10.1
- **NOTE:** The Firefox Docker node user for management obtained the IP 192.168.10.2 from the DHCP pool configured on the lab switch.
10.5.2 VMWare workstation machines

External (meaning not running inside EVE) VMWare workstation machines can be connected to EVE labs using cloud interfaces.

⚠️ **NOTE:** A single Cloud interface can be used to connect more than one external VM to the EVE lab.

**Example:** Connecting Web security Appliance (WSA) to the lab using Cloud2 interface.

⚠️ **NOTE:** VMs must be in a powered off state to assign network interfaces.

Step 1: Open your VMWare Workstation Virtual Network Editor and configure the VMnet interface for the Cloud and WSA VMs. If necessary add a new VMnet. The example below is showing VMnet2 Settings in VMWare workstation. DHCP must be disabled for VMnet2.

**Virtual Network Editor settings:**
EVE and WSA VMs settings

EVE VM, the third port (Network adapter 3) is assigned to VMnet2. This is Cloud2 inside your EVE labs.

Cisco Web Security Appliance (WSA), Management port is assigned to VMnet2

EVE Lab connected to the WSA (Cloud2)

⚠️ NOTE: ESXi WSA VM obtained the IP 192.168.10.3 from the DHCP pool on the lab switch. The gateway is 192.168.10.1

⚠️ NOTE: The Firefox Docker node user for management obtained the IP 192.168.10.2 from the DHCP pool configured on the lab switch.
10.6 Connecting EVE Lab to a physical device

10.6.1 ESXi EVE

To connect a physical device (e.g. router, switch) to an EVE lab over a cloud interface, we have to bridge the ESXi NICs ethernet port to a VMnet interface.

⚠️ IMPORTANT NOTE: Make sure that you have set Promiscuous mode security settings on the vSwitch and Port group to Accept.

The Example below is showing ESXi Server settings of the virtual network bridged to the physical interface.

**Logical chain of the networking bridge:**

EVE Lab Cloud0 → Portgroup “Management 90 UD” → vSwitch 1 → Physical Adapter eth1
vSwitch1 settings bridged with Server Ethernet port vmnic1 (physical adapter)

Portgroup “Management 90 UD” Settings associated with vSwitch1

EVE VM Settings

EVE VM Cloud0 is connected to Portgroup “Management 90 UD”
EVE Lab Connected to a physical device

Physical Topology

Cisco 887M device port Fastethernet 3 is physically connected to Server port eth1.

EVE Lab Topology

EVE lab switch port G0/0 is configured as trunk and connected to Cloud0 over bridged chain to the physical Cisco 887M Router switchport Fastethernet 3

10.6.2 VMWare workstation EVE

Similar to the ESXi connection, it is recommended to have a second ethernet interface on your PC. It can be a USB ethernet extender as well. Not all ethernet adapters fully support a layer2 connectivity over it. MS Windows OS itself strips off any tags added to the packet. Even if your NIC supports 802.1q VLAN tagging, Windows 10 strips these tags off. The example below will show a Windows 10 host connected to a physical 3750G-24 switch. The Windows 10 Host has an Intel (R) PRO/1000 PT Dual port server adapter and is bridged with VMWare workstation (version 14) VMnets.
Virtual Network Editor Settings, Bridged VMnet interfaces with Real NIC Ports

EVE VM Settings. Network adapter is bridged to VMnet0 (ethernet Intel Pro 1), and Network adapter 2 is bridged to VMnet1 (ethernet Intel Pro 2).

Responding cloud interfaces on EVE VM:

Cloud0 → Network Adapter → VMnet0 → IntelPro
Cloud1 → Network Adapter 2 → VMnet1 → IntelPro#2
Physical connection scheme and VMware bridging.

EVE Lab scheme.

The following solution allows Windows hosts to transmit tagged packets over ethernet. This has been used in the example above.

⚠️ Warning. You are making changes to your Windows registry files! This is at your own risk.

https://www.intel.co.uk/content/www/uk/en/support/articles/000005498/network-and-i-o/ethernet-products.html

10.6.3 Bare metal server EVE

A physical server usually has more than one ethernet port, free ports can be bridged with EVE clouds and used for external connections. EVEs internal interface settings are already bridged in order, pnet0-9 are mapped to eth0-9. Refer to the bridging table in section 10.4.

```
cat /etc/network/interfaces
```
Basically, your servers physical port eth0 is bridged to pnet0 which is Cloud0 in your labs, eth1 is bridged to pnet1 which is Cloud1 in your labs (and so on). Refer to the bridging table in section 10.4

The example below shows how to connect a bare-metal EVE server with a physical Cisco 3750E switch.

**Physical connection topology:**

![Diagram of EVE server and Cisco 3750E switch connection]

The EVE lab switch’s CDP neighbor is the 3750E switch’s port Gig 1/0/25: A trunk has been configured between the EVE lab switch and the physical 3750E switch.
11 Advanced EVE Lab features

11.1 Multi-configuration sets export feature

Eve Professional/Learning Center includes a "Multi-configuration Set" feature that allows you to save and manage multiple sets of configurations in a single lab. The "Configuration Export" and “Startup-configs” features will allow you to set these saved configurations as startup configs for your nodes when they boot.

⚠️ IMPORTANT NOTE: Before you start using the “Multi-configuration Set” feature, you must complete at least one configuration export.

Nodes will be greyed out without the option to enable “Startup-configs” until you complete at least one configuration export for each node.

Node boot order:

- **NVRAM**: NVRAM is used as writable permanent storage for the startup configuration. During the boot process, the node will always check NVRAM for a saved configuration. Saving the configuration to NVRAM requires a vendor specific command. Cisco: copy run startup (wr), Juniper: commit, etc. It is **MANDATORY** to save a node’s configuration before you can export it.

- **Exported configuration**: A node configuration that has been exported from the node. It can be used to backup configurations or to set them as startup-configs.

- **Wipe node**: Wiping a node will erase the NVRAM (running config) or the temporary image snapshot, depending on the type of node. Upon a successful wipe, the node will boot with the factory default configuration or the configuration included in the base image you are using. If you have the “Startup-config” feature enabled for the node, then it will boot with the chosen config set. You must wipe a node after changing certain node template settings like the image
or startup-config. You also must wipe the node the first time you want to enable the “Startup-config” feature.

**Factory default configuration**: The base configuration that is applied from the manufacturer.

### 11.1.1 Supported nodes for configuration exports

- Cisco Dynamips all nodes
- Cisco IOL (IOS on Linux)
- Cisco ASA
- Cisco ASAv
- Cisco CSR1000v
- Cisco Nexus 9K
- Cisco Nexus Titanium
- Cisco vIOS L3
- Cisco vIOS L2
- Cisco XRv
- Cisco XRv9K
- Juniper VRR
- Juniper VRR
- Juniper vMX-NG
- Juniper vQFX
- Juniper vSRX
- Juniper vSRX-NG
- Mikrotik
- PFsense FW
- Timos Alcatel
- vEOS Arista

### 11.1.2 Startup config management

#### 11.1.2.1 Global commands

Configurations can be managed via the “Startup-configs window which can be accessed from the sidebar menu while on the Topology page.

**Topology page, More Options:**
11.1.2.2 Individual node commands

Select node, right click

**Wipe**: Wipes the NVRAM for a single node

**Export CFG**: Exports the configuration for a single node

11.1.2.3 Multiple selected nodes commands

**Wipe Selected**: Wipes the NVRAM for selected nodes

**Export all CFGs**: Exports the configuration for selected nodes

**Set nodes startup-cfg to default configset**: Set selected nodes to the default config set

**Set nodes startup-cfg to none**: Set nodes to boot from NVRAM or from factory default if wiped.

**Delete modes startup cfg**: Delete selected node’s startup cfg. (clean default set)
11.1.2.4 Startup-configuration window

No configuration exports or manual configs loaded for nodes

Startup-configs are exported and the “Configuration Export” feature can be used.

11.1.2.5 Startup-config window information

<table>
<thead>
<tr>
<th>Config Set</th>
<th>Config set menu</th>
</tr>
</thead>
<tbody>
<tr>
<td>R1</td>
<td>No configuration is available for node. Grey node</td>
</tr>
<tr>
<td>R1</td>
<td>Configuration is available and can be used. Blue node. Exported configuration persist</td>
</tr>
<tr>
<td>R2</td>
<td>Configuration persist but it is disabled. Node will boot from NVRAM or factory default if it is wiped</td>
</tr>
<tr>
<td>R1</td>
<td>Configuration persists and node will boot from the configuration after being wiped</td>
</tr>
</tbody>
</table>

Add new config set.
<table>
<thead>
<tr>
<th>CONFIG SET</th>
<th>Rename config set. The Default Config Set cannot be renamed.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Select a Config Set and delete it. You cannot delete the Default Config Set. The Default configuration set can be cleaned using the sidebar / More options / Delete default configuration set</td>
</tr>
<tr>
<td></td>
<td>Upload configuration set from your local PC</td>
</tr>
<tr>
<td></td>
<td>Download configuration set to your Local PC</td>
</tr>
<tr>
<td></td>
<td>Apply Config Set button: Sets all nodes to boot from the chosen config set.</td>
</tr>
<tr>
<td></td>
<td>Config Reset button: Sets all nodes to boot from none. Node will check boot order. If the Wipe function is used, nodes will boot from factory default.</td>
</tr>
<tr>
<td></td>
<td>Individual node export or import configuration. Configuration export/import file format is .txt.</td>
</tr>
<tr>
<td></td>
<td>Ace Editor. Different vendor configuration edit option. Just Text visual format.</td>
</tr>
</tbody>
</table>

11.1.3 Export Default configuration set

⚠️ NOTE: The default configuration set is hardcoded. It is mandatory to export a nodes config before you can start building custom configuration sets.

Example:
Step 1: **MANDATORY**: Configure your nodes and make sure you applied the vendor specific command to save the running configuration to NVRAM. If you do not save the configuration, it will not be exported and in the notification area, you will receive an error message stating the node cannot be exported.

In this example the nodes have been configured with hostnames only and the configurations have been saved to NVRAM.

Step 2: Chose any method to export configurations to the Default Config Set. You can use export a single node, a group of nodes, or all nodes. Only supported nodes configurations will be exported.

Step 3: In the example below a group of nodes were selected to export configurations.

Default configuration set is completed. The notification area will display “Export All: done” when complete.

**NOTE**: you can configure your nodes with your preferred configuration and make it the default configuration set.

### 11.1.4 Boot nodes from exported Default config set

**Step 1**: Stop all nodes

**Step 2**: Open sidebar and click Startup-configs. Make sure your config is set to default and the nodes config switch is green (switch on/off beside node). Press the green “Apply Config Set” button (Set all nodes to selected config set) and all your nodes will boot with the default config set after wiping them.
Step 3: Wipe nodes. For more information on a nodes boot order, refer to section 11.1

Step 4: Start nodes

11.1.5 Export new custom config set

This section will describe how to create a new custom configuration set for the same example above.

⚠️ Make sure your nodes are running and booted from the default set.

Step 1: Create new custom named (e.g. “IP Addressing”) configuration set, Press Add new config set.

Name it and press Add.

The new configuration set is created.

⚠️ **NOTE:** It will duplicate the default configuration set under your IP Addressing config set.

Step 2: Select newly created Config set IP Addressing and hit the green confirm button (Set all nodes to selected config set) on the right.

Step 3: Make sure your nodes have the Startup-config slider switched to “ON” and verify the config set menu has the “IP Addressing” set selected.
Step 4: Return back to your lab and continue configuring nodes until your preferred configuration is complete. In this Example, the IP addresses are configured on the nodes.

Step 5: **IMPORTANT:** YOU MUST save the configuration on all nodes, even if the configuration was not changed.

Step 6: Use any method (individual, group or all) to export the new configurations to the IP Addressing set.

Step 7: You can verify that the configs were exported by re-opening the “Startup-config” window.

Make sure the correct config set is selected, and check if the configuration is exported for the node or nodes.

Repeat steps 1-7 of this section for the next configuration set.

11.1.6 Edit exported configurations

It is possible to edit your configurations for the nodes manually.

Step 1: Select a config set and apply it with the green confirm button (Set all nodes to selected config set) on the right.

Step 2: Select the node you want to edit the configuration of and make your changes. Click “Save” when you are finished.
Step 3: Apply the config set to all nodes with the green “Apply Config Set” button on the right (Set all nodes to selected config set).

⚠️ NOTE: you can manually copy/paste any configuration into the config set editor and apply it to your node. Make sure your configuration interfaces match the lab node’s interface names.

11.1.7 Set lab to boot from config set

To set your lab nodes to boot from the exported configuration, follow the steps below:

Step 1: Wipe nodes. Refer to section 11.1 for information about wiping nodes and the order of operations during boot.

Step 2: Open the “Startup-config” window from the left sidebar.

Step 3: Select your preferred config set and apply it by pressing the green “Apply Config Set” button on the right (Set all nodes to selected config set).

Step 4: Start nodes.

11.1.8 Set lab to boot from none

To reset your lab nodes’ configuration to factory default follow the steps below:

⚠️ NOTE: If you have created a template image with a custom configuration, then the following steps will reset the node to the base configuration of that template image.

Step 1: Wipe nodes. Refer to section 11.1 for information about wiping nodes and the order of operations during boot.
Step 2: Open the “Startup-config” window from the left sidebar

Step 3: Press the red “Config Reset” button on the right (Set all nodes to no startup-config).

Step 4: Start nodes

11.1.9 Delete a config set

Select the config set you want to delete and click the “Delete” button. You cannot delete the default config set.

11.1.10 Rename a config set

Step 1: Select the config set you want to rename. Change the name and hit “Save.” You cannot rename the default config set.

11.1.11 Export a config set to your local PC

It is possible to export configuration sets to your local PC.

Step 1: Select the config set you wish to export.

Step 2: Save it on your local PC.
NOTE: You can open this archive and edit your node configs manually. Archived configs are saved in txt format. After editing you can archive it back to .zip format and import it in EVE.

11.1.12 Import config set from local PC.

It is possible to import config sets to your lab.

Browse to the file on your PC, select the archive or config set and upload it.

Uploaded config sets without a Name will appear in the config set menu with the name "Import". To rename config sets, refer to section 11.1.10.

11.1.13 Export a single nodes config to your local PC

Open the “Startup-configs” window from the Side bar. Select the node that you want to export the configuration of and click the “Export” button.

11.1.14 Import a single nodes config to your local PC

Open the “Startup-configs” window from the sidebar. Select the node that you want to import the configuration to and click the “Import” button. Browse to the file on your local PC and click “Upload.”
NOTE: The configuration must be in txt file format.

11.1.15 Set lab nodes to boot from different config sets

The “Multi Configuration set” feature allows you to set nodes to boot from different config sets in the same lab.

Option 1: Open the “Nodes” list from the left sidebar. Choose your node and select a config set from the dropdown. Stop the node, wipe it and start it again. Your node will boot from the selected config set.

Option 2: Stop the node, right-click on the node and click “Edit.” Select your preferred config set for the node and click “Save.”

11.1.16 Lab config script timeout

Lab config script timeout is used when nodes are waiting to boot from a config set. The node will literally wait during boot until the configuration is applied from the config set.

Hit “More actions” and then “Edit lab” from the sidebar. Set the config script timeout in seconds. By default, this timer is set to 300 seconds for new labs.

⚠️ NOTE: For heavy labs and nodes with long configurations, you can raise this timer to 600 seconds or higher.

11.2 Lab design objects

EVE Pro has simple drawing elements integrates to add drawings and text information to the lab topology. Objects can be placed on the topology in two ways.

Example below, EVE lab with design elements:
Option 1: Side bar -> Add an object

Option 2: Right-click on a free area on the topology canvas to add an object.

11.2.1 Custom shape

There are two custom shapes that can be added to the topology: square and circle (sphere).

**Type:** Square or circle

**Name:** This field can be filled with your preferred shape’s name. If the field is left empty, EVE will generate a name for the shape.

**Border type:** Two options: line or dashed
11.2.2 Text

It is also possible to add text objects to your EVE topology.

Text: Type the text you want to add to the topology

Font Size: Set your font size

Font Color: Set your font color

Background Color: Set your text background color

Example: text objects added to the topology.

11.2.3 Resize square, circle, or text objects

Move your mouse over the right bottom corner of the object until a corner symbol appears. Left click and drag your mouse to change object size or style (rectangle, sphere)

11.2.4 Pictures converted to HTML

Custom images may be added by converting it to HTML format
Step 1: Convert your picture to the HTML format.

https://www.askapache.com/online-tools/base64-image-converter/

Step 2: Add a text object to the topology and paste the HTML output from the conversion into the form.

Step 3: To resize a custom picture on the topology, move your mouse pointer to the picture and double click on it. Then press ctrl+ right to set object in resize mode. Now using any corner, you can resize your picture to a suitable format.

11.2.5 Cloning objects and overlay positions

Right click on the object you want to clone and choose “Duplicate”. You can also change the object’s overlay position using the “Send to Back” or “Send to front” options.

11.2.6 Objects Editing

Right click the object and choose “Edit” for additional options.
At the bottom of the “Topology Canvas” page, additional object options will appear.

<table>
<thead>
<tr>
<th>Z-index</th>
<th>Border width</th>
<th>Border type</th>
<th>Border color</th>
<th>Background color</th>
<th>Transparent</th>
<th>Name</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Z-index**: Used to change the object’s overlay position on the “Topology Canvas.” An object with a higher numerically valued z-index will cover an object with a lower numerically valued z-indexed.

**Example**: The blue object has a z-index of -1 and the orange object’s z-index is 0. Orange object is top over blue object.

**Border width**: Used to change the object’s border width.

**Border type**: Used to change the border style of the object between solid and dashed.

**Border color**: Used to change the color of the object’s border.

**Background color**: Used to change the background color of the object.

**Transparent**: Turns off background color (filling) and makes the object transparent.

**Rotate**: Used to rotate the object on the topology.

**Name**: Used to change the object’s name.

To save the object, press Save (green button).

11.2.7 Lock objects movement

The “Lock Lab” feature prevents objects from being moved around on the canvas (among other things). For more information about this feature, refer to section 8.1.13.

11.3 Custom design topology

EVE Pro includes a feature to upload your own custom topology picture and map nodes to it for easy access.
11.3.1 Custom design upload

Before you upload a custom picture in the lab, make sure it is in .png or jpg format with resolution 130-150x130-150 pixels.

TIP: It is best is to create a topology in the MS Visio and after convert it to the .png picture format with resolution 140x140.

Step 1: Open “Add an Object” and then “Pictures” from the left sidebar or right click on a free area on topology canvas and hit “Add Picture.”

Step 2: Browse your PC for a .png or .jpg file and hit “Add”.

Once the picture is added to the topology canvas, the sidebar will display a new option: “Pictures.”

Step 3: Open the “Pictures” menu item.

Pictures window management

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Icon" /></td>
<td>Delete uploaded picture from the lab</td>
</tr>
<tr>
<td><img src="image" alt="Icon" /></td>
<td>Image Map: Map nodes to places in the picture</td>
</tr>
<tr>
<td><img src="image" alt="Icon" /></td>
<td>Display uploaded picture. Work with lab and custom topology</td>
</tr>
<tr>
<td><img src="image" alt="Icon" /></td>
<td>Zoom/unzoom uploaded custom topology</td>
</tr>
<tr>
<td><img src="image" alt="Icon" /></td>
<td>Makes the window transparent to see the “Topology Canvas” behind it. Clicking again returns to the normal view.</td>
</tr>
</tbody>
</table>
11.3.2 Custom topology mapping

This feature allows you to map the lab nodes to your custom topology picture.

Step 1: Open the Image Map window:

Step 2: Select a node, from the dropdown menu, that you want to map to the topology.

Step 3: Move your mouse over a node icon on the “Image Map” and click to map it. The grey circle means that the node is mapped.

Step 4: Continue mapping the rest of the nodes.

Step 5: OPTIONAL. You can also add a mapping for a device external to your EVE server in order to telnet, VNC, or RDP to it. This way you can open sessions to all your devices (whether external or internal) in one place.

Select from menu:

And map with node on topology.

Change image map adding protocol, IP and port.
Step 6: Save your mapping and refresh the browser with F5.

11.3.3 Delete topology or mapping

To delete a single node mapping, right click on node mapping circle and click “Delete.”

To delete the entire custom topology, click delete.

11.4 Lab Timer

For self-controlled lab timing, EVE Pro has integrated a “Lab Timer” feature.

11.4.1 Set the Lab Countdown Timer

Step 1: Click “More Options” and then “Edit Lab” from the sidebar.

Step 2: Set the “Lab Countdown Timer” in seconds for the time you wish to display on the topology and confirm by clicking “Save”. 7200 seconds = 120 minutes.

Step 3: To start your lab, be sure all nodes are running.

Step 4: Hit “Lock Lab” from the sidebar. A red sign means that the lab is locked.

Step 5: When ready to start, click “Refresh Topology” from the sidebar. The countdown timer will be displayed on the “Topology Page” in the top left corner.

11.4.2 Stop the Lab Countdown Timer

Step 1: Click “Unlock Lab” Grey means that the lab is unlocked.

Step 2: Hit “Refresh Topology” from the sidebar

⚠️ NOTE: The lab timer does not stop nodes or disconnect sessions from the lab.
12 Wireshark capture

All EVE-NG Professional and Learning Centre console types have the integrated Wireshark capture feature. This means that it is not necessary to have Wireshark installed on the client machine you are using to access EVE with.

EVE-NG Professional currently supports ethernet interface capturing only.

12.1 Native Console Wireshark capturing

Step 1: Right click on the node you wish to capture, choose “Capture” and then the relevant interface. The capture will open in an RDP session.

Step 2: To save the captured file to your client PC, stop the capture and choose File/Save As
Step 3: Choose the location where you want to save the captured file

**IMPORTANT:**

/nobody/thinclient_drives/

The RDP Session will list your client PC’s HDDs where you can save your captured file. Enter a name for your captured file and press Save.

**12.2 HTML5 Console Wireshark capturing**

Step 1: Right click on the node you wish to capture, choose capture and the interface. The capture session will open in the new browser window.
Step 2: To save the captured file to your PC, stop the capture and choose File/Save As

Step 3: Choose the location where you want to save the captured file

**IMPORTANT:**

/nobody/thinclient_drives/GUAC/Download

Enter a name for your captured file and press Save.
Step 4: A window will open that will allow you to save your captured file on your client PC. If the client PC’s browser is set to download automatically, your captured file will be saved in the default browser download folder.

12.3 HTML5 Desktop Console Wireshark capturing

Step 1: Right-click on the node you wish to capture, choose capture and the interface. The capture will open in an RDP session.
Step 2: Stop capturing with the STOP button.

Step 3: Chose File/Save As

Step 4: Chose the path to save the captured file,

**IMPORTANT:**

/nobody/thinclient_drives/media/nobody/thinclient_drives/GUAC/Download/

Enter a name for captured file. Press Save.
Step 4: A window will open that will allow you to save your captured file on your client PC. If the client PC’s browser is set to download automatically, your captured file will be saved in the default browser download folder.
13  Thinclient File Exchange

The Thinclient file exchange feature allows you to transfer files between your native client workstation and the integrated Docker Desktop. It is used when managing EVE via HTML5 consoles. This feature eliminates the need for file transfer software on your client workstation and makes it very easy to import/export labs or download Wireshark captures.

13.1  Thinclient files downloading

The Thinclient file exchange feature allows you to download files from your EVE Server over an HTTP/HTTPS session to your client PC. Examples below will show you how to download exported lab files. This feature is not restricted to just lab files or Wireshark captures. It can be used to download or upload any miscellaneous files you may need.

Example: HTML5 Desktop console: We want to export our EVE lab and download it to our client PC over HTML5.

Step 1: Export your lab to your HTML5 Desktop

Step 2: Save it to the HTML5 desktop station. Your exported file will be saved in the Downloads Directory of HTML5 desktop station.
Step 3: Navigate to the desktop of the HTML5 desktop station and double click `thinclient_drives`

Step 4: Once opened navigate to: `thinclient_drives/GUAC/Download/`

Step 5: Drag and drop the exported lab file from right to left.
Step 6: A window will open that will allow you to save your captured file on your client PC. If the Native PC’s browser is set to download automatically, your selected file will be saved in the browsers default download folder.

**NOTE:** Please refer to section 12 for downloading Wireshark capture files from EVE HTML5 consoles.

### 13.2 Thinclient File upload

Sometimes it is necessary to upload files to your EVE labs. The Thinclient file exchange feature allows you to upload files from your client PC to the EVE HTML5 desktop station. The example below will show you how to upload a text file to the EVE HTML5 desktop station. Any other files can be uploaded the same way.

Step 1: Adjust your browser so that you can see it and the file that you want to transfer.
Step 2: On the EVE HTML5 Desktop navigate to: thinclient_drives/GUAC/ and drag and drop the file from your client PC to opened location on HTML5 Desktop.

Step 3: Next you will see a notification in the bottom right corner.
Step 4: To finish the operation and see the uploaded file in the HTML desktop station, press the refresh button. Our Text file SW.txt has been uploaded.

13.3 Other thinclient file operations

Files that have been uploaded via the thinclient feature can also be transferred to nodes inside your EVE labs via TFTP. In the example below we have uploaded a config file (sw.txt) and would like to transfer it to node R1.

Step 1: Add the eve-gui-server docker node to your lab and edit its settings. Set the console type to RDP and configure the IP address settings (DHCP or static) accordingly so that the
docker node can reach the destination node (R1 in this example). For Docker IP addressing please refer to section 14.

Step 2: Click on the **eve-gui-server** docker node to open an RDP session.

Step 3: Open the **thinclient_drives** location where you uploaded your file to:

/thinclient_drives/media/nobody/thinclient_drives/GUAC/

Next, drag and drop your file to the desktop folder named TFTP.
Step 4: Open the destination node’s (R1) console and use the tftp command to copy your file:
14 Dockers

14.1 EVE integrated docker stations

EVE-NG Professional and Learning Centre edition have integrated Docker stations that allows your server to use its resources more efficiently. Dockers offer the advantage of not having to duplicate processes already running on the host system. With a Docker, you run only the processes you need for the hosted application. In comparison, virtual machines have to run a complete guest operating system, including many of the same processes that are already running on the server host.

14.1.1 Docker Machines

eve-gui-server

- Fully featured Linux workstation with integrated thincient. For more information on the thincient operation please refer to section 13.
- RDP console
- DHCP or Static IP address
- WWW Server
- TFTP Server
- Java Integration for ASDM access to Cisco ASA/IPS. For access to ASDM where Java is required, please follow this reference link:
  
  https://192.168.100.5/admin/public/asdm.jnlp

  Where 192.168.100.5 is the ASA IP for ASDM connection

eve-napalm

- A Docker for scripting and automation in EVE labs. NAPALM is a Python library which aims to solve this by providing a unified API across network devices from various vendors.
- Telnet console
- DHCP or Static IP address

eve-ansible

- A Docker for scripting and automation in EVE labs. Ansible is software that automates software provisioning, configuration management, and application deployment.
- Telnet console
- DHCP or Static IP address

**eve-firefox**

- A Docker for hosting a Mozilla Firefox browser. Useful for accessing another nodes management interface using http or https. The browser already has Java integrated so that you can utilize GUIs that require it, like ASDM for Cisco’s ASA.
- RDP console
- DHCP or Static IP address
- Java Integration for ASDM access to Cisco ASA/IPS. For access to ASDM where Java is required, please follow this reference link:
  
  https://192.168.100.5/admin/public/asdm.jnlp

  Where 192.168.100.5 is the ASA IP for ASDM connection

**eve-chrome**

- A Docker for hosting a Google Chrome browser. Useful for accessing another nodes management interface using http or https. The browser already has Java integrated so that you can utilize GUIs that require it, like ASDM for Cisco’s ASA.
- DHCP or Static IP address
- Java Integration for ASDM access to Cisco ASA/IPS. For access to ASDM where Java is required, please follow this reference link:
  
  https://192.168.100.5/admin/public/asdm.jnlp

  Where 192.168.100.5 is the ASA IP for ASDM connection

**14.1.2 Docker IP address setup**

EVE integrated Docker stations have two options for setting an IP address.
DHCP IP address option.

Step 1: Add the node to the topology and make sure the DHCP option is enabled under the edit node window. Refer to section 14.1.3 for the correct console type.

Step 2: Ensure the docker’s DHCP request can reach a DHCP server either in your lab or externally through a Cloud Network like Cloud0.

Static IP address option.

Step 1: Add the node to the topology and make sure the DHCP option is enabled under the edit node window Reference section 14.1.3 for the correct console type.

Step 2: On the left sidebar menu open Startup-config and use the example syntax below to set the ip for your Docker node. Make sure you are using the exact syntax for your static IP setup:

```bash
ip addr add 172.22.7.101/24 dev eth0
ip route add default via 172.22.7.1
```
Step 3: Press the Save button below and switch the node to boot from the startup-config.

14.1.3 Docker Consoles

To set consoles for EVE Docker stations, right click on node and click Edit. Set the required console type.
### Docker Station

<table>
<thead>
<tr>
<th>Docker Station</th>
<th>Console type</th>
</tr>
</thead>
<tbody>
<tr>
<td>eve-gui-server</td>
<td>RDP</td>
</tr>
<tr>
<td>eve-napalm</td>
<td>Telnet</td>
</tr>
<tr>
<td>eve-ansible</td>
<td>Telnet</td>
</tr>
<tr>
<td>eve-chrome</td>
<td>RDP</td>
</tr>
<tr>
<td>eve-firefox</td>
<td>RDP</td>
</tr>
</tbody>
</table>

#### 14.1.4 Docker cli root access

All EVE docker stations have the following configured CLI root account.

**Username:** root  
**Password:** eve
15 EVE Troubleshooting

15.1 CLI diagnostic information display commands

15.1.1 Display the currently installed EVE Pro version:

dpkg -l eve-ng-pro

```
root@eve-ng-#: dpkg -l eve-ng-pro
Desired-Uninstall-Remove-Purge-Hold
Status-Opt-Inst/Conf-files/Unpacked-half-conf/half-inst/strip-eWait/Trig-pend
/ Err=(none)/Reinst-required (Status.Err: uppercased)
/ Name Architecture Description
-------------------------------------------------------------------------------
ii eve-ng-pro 0.9.0.64 amd64 A new generation software for networking labs.
root@eve-ng-#:]
```

15.1.2 Display if EVEs Intel VT-x/EPT option on/off:

kvm-ok

```
root@eve-ng-#: kvm-ok
INFO: def/AVX exists
AVX acceleration can be used.
root@eve-ng-#:]
```

15.1.3 Display EVEs CPU INFO:

lscpu

```
root@eve-ng-#: lscpu
Architecture: x86_64
CPU op-code(s): 32-bit, 64-bit
Byte Order: Little Endian
CPU(s): 1
On-line CPU(s) list: 0-23
Thread(s) per core: 1
Core(s) per socket: 1
Socket(s): 24
NUMA node(s): 4
Vendor ID: GenuineIntel
CPU family: 6
Model: 44
Model name: Intel(R) Xeon(R) CPU X5680 @ 3.33GHz
Stepping: 2
CPU MHz: 3334.053
 HoguNIFS: 0x0000
Virtualization: VT-x
```

15.1.4 Display EVEs HDD utilization.

If the `/boot` only has a little space left you can refer to section 3.5.1.1. If the `eve-ng-vg-root` reaches 99% or 100% then you will need to expand the HDD in order to continue using EVE. The Solution to expand your HDD is described in section 15.1

df -h
15.1.5 Display EVE's Bridge interface status

```
root@eve-ng: # brctl show
bridge name bridge id STP enabled interfaces
br000 800.000000000000 G  so
br001 800.000000000000 G  so
br002 800.000000000000 G  so
br003 800.000000000000 G  so
br004 800.000000000000 G  so
br005 800.000000000000 G  so
br006 800.000000000000 G  so
br007 800.000000000000 G  so
br008 800.000000000000 G  so
br009 800.000000000000 G  so
```

15.1.6 Display EVE's system services status

```
root@eve-ng: # systemctl list-unit-files --state=enabled
UNIT FILE  STATE
accounts-daemon.service  enabled
avahi-daemon.service  enabled
capslock.service  enabled
cpulimit.service  enabled
cron.service  enabled
docker.service  enabled
dotty.service  enabled
uvc-monitor.service  enabled
systemd-resolved.service  enabled
systemd-udevd.service  enabled
systemd-update-udevd.service  enabled
systemd-update-monitor.service  enabled
dm-event.socket  enabled
docker.socket  enabled
logfile-socket  enabled
lvm2-lvm-lvmd.socket  enabled
lvm2-lvm-lvmd.socket  enabled

remote-fs-target.socket  enabled
evt-daily-upgrade.timer  enabled
evt daily.timer  enabled
```

15.2 Expand EVE's System HDD

⚠️ IMPORTANT NOTE: DO NOT expand your current/existing HDD on your EVE VM!

15.2.1 Expand HDD on VMware Workstation

Expanding your EVE's system HDD is achieved by adding an additional HDD to your EVE VM.
Step 1: Stop all your labs and shutdown EVE.

Step 2: Go to edit VM settings and add a new Hard drive. Then click Next.

Step 3: Leave the recommended SCSI HDD option and then click Next.

Step 4: Make sure you have selected the option “Create a new Virtual disk.”

Step 5: Set your desirable HDD Size; example 200GB.

Step 6: Make sure you have set the option “Store Virtual disk as a single file” and then click Next

Step 7: Optional: Specify the location of where your new HDD will be stored, then click Finish.

Step 8: Boot your EVE VM, HDD size will be expanded automatically. To verify, use the command to verify HDD utilization referenced in section 15.1.4

15.2.2 Expand your HDD on ESXi

Expanding your EVEs system HDD is achieved by adding an additional HDD to your EVE VM.

Step 1: Stop all your labs and shutdown EVE.

Step 2: Go to edit VM settings and add a new Hard drive. Then click Next.

Step 3: Make sure you have selected the option “Create a new Virtual disk.” Then click Next.

Step 4: Set your desirable HDD Size; example 200GB.

Step 5: It is recommended to set the Thick Provision Lazy Zeroed HDD option.

Step 6: Specify the location of where your new HDD will be stored and then click Next.

Step 7: Leave the recommended SCSI HDD option as is and click Finish.

Step 8: Boot your EVE VM, the HDD size will be expanded automatically. To verify, use the command to verify HDD utilization referenced in section 15.1.4

Expand your HDD on a Bare Metal EVE Server

It is a complicated process to expand a HDD for a bare metal EVE server. Please open a ticket in our Live chat support for advice.

http://www.eve-ng.net/live-helpdesk
Use a google account to join in the Live Chat or create new chat account.

### 15.3 Reset Management IP

Type the following commands into the CLI followed by enter:

```
rm -f /opt/ovf/.configured
su -
```

The EVE VM will go through the Management IP address setup wizard. Please follow the steps in section 3.4.1 for Static IP or 3.4.2 for DHCP IP setup.

### 15.4 EVE Log files

EVE log Files can be obtained from the System Logs page under the System dropdown menu.

Use the menu to collect log file data you are interested in.
16 Images for EVE

Images must be uploaded and prepared before they can be used in labs. The best way to upload images is to use the WinSCP tool for Windows environment or FileZilla for MAC OSX and Linux.

Link to download WinSCP:
https://winscp.net/eng/download.php

Link to download FileZilla:
https://filezilla-project.org/

To access EVE, use SSH protocol (port 22).

Supported images for EVE are stored in the three locations:

- IOL (IOS on Linux), /opt/unetlab/addons/iol/bin/
- Dynamips images, /opt/unetlab/addons/dynamips
- Qemu images, /opt/unetlab/addons/qemu

16.1 Qemu image naming table

⚠️ IMPORTANT NOTE: Intel VT-X/EPT must be enabled to run Qemu nodes in EVE. For information on how to enable this option, Refer to section 3: EVE Installation.

The directory names used for QEMU images are very sensitive and must match the table below exactly in order to work.

Ensure your image folder name starts as per the table. After the "-" you can add whatever you like to label the image. We recommend using the version of your image.

Folder name examples:

- firepower6-FTD-6.2.1
- acs-5.8.1.4

The image inside the folder must be named correctly:
Example: hda.qcow2 or virtioa.qcow2

Full path Example: opt/unetlab/addons/qemu/acs-5.8.1.4/hda.qcow2

<table>
<thead>
<tr>

</tbody>
</table>
16.3 How to add custom image template

For advanced users only. SSH to your EVE.

**Step 1.** Prepare a template file

All templates files are in "/opt/unetlab/html/templates/" Make a copy of the most similar existing template to your new file

Example:
```
```

**Step 1.1** Edit your new template file:

```
nano freebsd.php
```

**Step 1.2** Change content; setting for various images can vary depending on vendor requirements:

```
<?php
```
Step 2. Prepare config.php

EVE includes a sample file: /opt/unetlab/html/includes/config.php.distribution

If you don't have the config.php file, copy the sample config.php.distribution to config.php.

```
cp /opt/unetlab/html/includes/config.php.distribution /opt/unetlab/html/includes/config.php
```

Step 2.1 Edit config.php

Original file content:

```php
<?php
/* TEMPLATE MODE .missing or .hided
 * .hided: will hide all template not present on system ( no image installed )
 * .missing: will display not selectable template not present ( no image installed )
 */
```
Step 3. Prepare a new icon for your template:

Step 3.1 Use Filezilla or Winscp to copy your custom icon BSD.png (icon we have in freebsd.php - see sample at step 1)

This icon should be about 30-60 x 30-60 in the png format (switch.png for example is 65 x 33, 8-bit/color RGBA)

Step 3.2 Copy this new icon into /opt/unetlab/html/images/icons/
Step 4. Template use

**Step 4.1** Create directory /opt/unetlab/addons/qemu/freebsd-11.1

```bash
mkdir /opt/unetlab/addons/qemu/freebsd-11.1
```

**Step 4.2** Upload a freebsd image

```bash
cd /opt/unetlab/addons/qemu/freebsd-11.1

wget "https://download.freebsd.org/ftp/releases/VM-IMAGES/11.1-RELEASE/amd64/Latest/FreeBSD-11.1-RELEASE-amd64.qcow2.xz" -O - | xzcat -c > hda.qcow2
```

⚠️ **NOTE:** It is example for FreeBSD image adding. Similar way you can add and try any your preferred image in the EVE. Image upload can be done using WinSCP or FileZilla.
